EXECUTIVE SUMMARY

This Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) Site Assessment Progress Report (SAPR) presents the finding of the 2022 PFAS investigation conducted from November 2021 through August 2022 at Solid Waste Management Unit (SWMU) 114 located within Kennedy Space Center (KSC), Florida. SWMU 114 includes area around Fire Station #2, Former Sewage Treatment Plant (STP) #17, the southern portion of the Shuttle Landing Facility (SLF) Runway, Remote Launch Vehicle (RLV) Hangar, and the Towway area. Fire Station #2 was constructed in 2008 and is currently active, housing fire station personnel and equipment, including aqueous film forming foam (AFFF). Fire Station #2 replaced the former fire station located in the Vehicle Assembly Building area to the southeast.

Previous environmental assessments have been performed at SWMU 114, including soil, groundwater, and surface water sampling for volatile organic compounds, polycyclic aromatic hydrocarbons, total petroleum hydrocarbons, and metals. No active remediation has been performed at the SWMU 114.

On February 6, 2020, a spill of five to eight (5 to 8) gallons of AFFF was reported on the SLF tarmac during a fire training exercise. The spill was reportedly rinsed off the tarmac with water and impacted tow areas, southeast and northwest of the tarmac. Additionally, AFFF was reportedly discharged into the stormwater pond to the west of Fire Station #2 during annual testing of equipment. During confirmation sampling for a 2019 Center-wide PFAS assessment, perfluorooctanesulfonic acid (PFOS) concentrations were detected in groundwater and surface water samples above the Florida Department of Environmental Protection (FDEP) provisional groundwater cleanup target level (pGCTL) and surface water screening level (SW SL) throughout the SWMU 114, including at one location where PFOS concentrations were greater than 10,000 nanograms per liter (ng/L).

Objectives of the PFAS investigation were modified as regulations evolved. The initial objectives of the 2021-2022 investigation were to delineate perfluorooctanoic acid (PFOA) and PFOS laterally and vertically to the pGCTL (70 ng/L separately or combined based on the U.S. Environmental Protection Agency (USEPA) lifetime health advisory levels issued in 2016) and to develop a general understanding of the surface water and groundwater interactions at SWMU 114. The objective of the groundwater investigation was made more stringent by KSC due to concerns of groundwater discharging to surface water, with the revised objective to delineate PFAS compounds in groundwater to the SW SL of 10 ng/L for PFOS in April 2022. The objective of the groundwater investigation was changed again by KSC to delineate to the USEPA Regional Screening Levels (RSLs) of 4 ng/L for PFOS; 6 ng/L for PFOA, perfluorononanoic acid (PFNA), and hexafluoropropylene oxide dimer acid (GenX); 39 ng/L for perfluorohexanesulfonic acid (PFHxS); and 601 ng/L for perfluorobutanesulfonic acid (PFBS) in June 2022.

Site assessment field activities were conducted at SWMU 114 from November 2021 through August 2022. During the 2021-2022 Site Assessment, 124 direct-push technology (DPT) samples were collected from 27 locations, 17 surface water samples were collected from 15 locations, 41 groundwater samples were collected from 37 newly installed monitoring wells, five concrete samples were collected from four locations, and one asphalt sample was collected. Additionally,

two soil borings were advanced to 60 feet for lithologic descriptions, ten staff gauges were installed, and one round of water level measurements were collected from monitoring wells and staff gauges for groundwater flow determination. All groundwater and surface water samples were analyzed for 25 PFAS analytes by USEPA Method 537M. Concrete, and asphalt samples were analyzed by synthetic precipitation leaching procedure (SPLP) PFAS analysis by USEPA Modified Method 537M.

Groundwater results were compared to the most recent RSLs published by USEPA for residential tap water (USEPA, 2022a) to determine the extent of PFAS contamination at SWMU 114 for six PFAS analytes (PFOA, PFNA, PFBS, PFHxS, PFOS, and GenX). Surface water results were compared to the FDEP SW SLs (FDEP, 2020) for PFOA and PFOS.

The PFAS investigation concluded that groundwater exceeding RSLs extends east and south to Banana Creek and west to approximately the center of the SLF runway. The extent of PFAS is approximated to the north, to an area between Sharkey Road and Astronaut Road, where samples below the RSLs do not fully bound SWMU 114. At least two distinct PFAS source areas are apparent from high concentrations of PFAS (PFOS > 4,000 ng/L) located near Fire Station #2 and along Towway, at S114-MW0007S, within SWMU 114. PFAS observed near Fire Station #2 is the result of equipment testing that resulted in AFFF discharge to the stormwater retention pond northeast of the fire station and from a spill of five to eight gallons of AFFF to the SLF tarmac on February 6, 2020, that was rinsed off the tarmac to the southeast and northwest. PFAS observed along the Towway is associated with reported releases of AFFF in the area. These two areas of high PFAS concentrations are separated by lower groundwater concentrations in DPTs samples along Towway near RLF Hangar.

Surface water samples indicated concentrations of PFOS above the SW SL in surface water bodies across the site. Further assessment and sampling are required to better understand the interaction between groundwater and surface water at SWMU 114.

Groundwater head measurements from August 3, 2022, indicate that flow at SWMU 114 is generally similar for the two intervals sampled, the shallow water table and intermediate groundwater screened between 25 feet (ft) below ground surface (bgs) and 35 ft bgs. A northeast to southwest trending groundwater divide is located near the middle of Towway where groundwater southeast of the divide flows to the south and groundwater northwest of the divide flows to the west. The groundwater divide generally separates the two areas of higher PFAS concentrations and corresponds to an area of higher surface water elevations in staff gauge SG7.

Concrete and asphalt samples collected in May 2022 confirm that a significant release of AFFF occurred near the stormwater pond northwest of Fire Station #2. Asphalt PFOS concentrations near the stormwater pond, in S114-AS0005, were 5,340 ng/L. Additional concrete samples surrounding Fire Station #2 and at the northwest and southeast edges of the SLF tarmac indicate elevated PFOS concentrations. These results indicate that discharges of AFFF in these locations have infiltrated into asphalt and concrete and may act as a continuing source of PFAS to groundwater and surface water after rain events.

A brief summary of the number of samples collected, number of detections, number of detections exceeding RSLs, and number of detection limits exceeding RSLs by media is provided below:

Additional DPT samples are required to delineate PFAS at SWMU 114 using the USEPA RSLs in groundwater. DPT samples should be located to the west and north. Samples may need to extend beyond the Former SLF Rescue Building and Morpheous Test Site to delineate PFAS in groundwater using the USEPA RSLs. Monitoring wells should be sampled and gauged quarterly to determine if seasonal impacts are observable, especially in shallow wells near surface water features.

Furthermore, surface water samples should be collected from additional ditches to further define the extent of surface water impacts at SWMU 114 and extending along the SLF runway. Staff gauges should be gauged quarterly with groundwater gauging to determine surface water flow and interaction with groundwater.

The results and path forward were presented to the KSC Remediation Team (KSCRT) in October 2022 (Meeting Minute 2210-M11). The draft meeting minutes are included in Appendix A.

1. INTRODUCTION

This Perfluoroalkyl and Polyfluoroalkyl Substances (PFAS) Site Assessment Progress Report (SAPR) presents the findings from the 2021-2022 investigation activities, completed between November 15, 2021, and August 19, 2022, at Solid Waste Management Unit (SWMU) 114 located within Kennedy Space Center (KSC), Florida. KSC is located on the northern portion of Merritt Island, between the Indian and Banana River Lagoons in Brevard County, Florida. SWMU 114 includes area around Fire Station #2, Former Sewage Treatment Plant (STP) #17, the southern portion of the Shuttle Landing Facility (SLF) Runway, Remote Launch Vehicle (RLV) Hangar, and the Towway area. During a 2019 Center-wide PFAS site assessment, perfluorooctanesulfonic acid (PFOS) concentrations were detected at concentrations greater than 10,000 nanograms per liter (ng/L) at SWMU 114 and additional investigation was recommended (GeoSyntec, 2019). During the 2021-2022 Site Assessment, 124 direct-push technology (DPT) samples were collected from 27 locations, 17 surface water samples were collected from 15 locations, 41 groundwater samples were collected from 37 newly installed monitoring wells, five concrete samples were collected from four locations, and one asphalt sample was collected. Additionally, two soil borings were advanced to 60 feet for lithologic descriptions, ten staff gauges were installed, and one round of water level measurements were collected from monitoring wells and staff gauges for groundwater flow determination. This PFAS SAPR was prepared by HydroGeoLogic, Inc. (HGL) for the National Aeronautics and Space Administration (NASA) under Task Order 4 of Indefinite Delivery Indefinite Quantity Contract 80KSC019D0012, Task Order 80KSC021F0168.

1.1 Overview

This document presents a summary of activities completed between November 15, 2021, and August 19, 2022, at SWMU 114, located at KSC, Florida. The activities conducted at SWMU 114 included the following:

- Advancing lithologic borings;
- DPT groundwater investigation;
- Monitoring well installation and sampling;
- Collection of water level data for groundwater flow determination;
- Surface water sampling investigation;
- Concrete sampling investigation; and
- Asphalt sampling investigation.

Fire Station #2, Former STP #17, the southern portion of the SLF Runway, RLV Hangar, and the Towway area were designated SWMU 114 under KSC's Resource Conservation and Recovery Act (RCRA) Corrective Action Program. KSC's operating permit (0026028-009-HO) issued by the Florida Department of Environmental Protection (FDEP) under the Hazardous and Solid Waste Amendment portion of RCRA requires KSC to investigate all known SWMUs and Locations of Concern (LOC) at KSC.

An Advanced Data Package (ADP) with the elements of this report for SWMU 114 PFAS SAPR was presented to the KSC Remediation Team (KSCRT) at the October 6, 2022, KSCRT meeting.

Meeting minutes are included in **Appendix A**. A copy of the PFAS SAPR ADP for SWMU 114 is provided in **Appendix B**.

1.2 Purpose

This PFAS SAPR presents the results of the site assessment activities conducted between November 15, 2021, and August 19, 2022, at SWMU 114. Objectives of the PFAS investigation were to delineate perfluorooctanoic acid (PFOA) and PFOS laterally and vertically to the FDEP provisional groundwater cleanup target level (pGCTL) of 70 ng/L separately or combined, and to develop a general understanding of the surface water and groundwater interactions at KSC. The objective of the groundwater investigation was made more stringent by KSC due to concerns of groundwater discharging to surface water, with the revised objective to delineate PFAS compounds in groundwater to the FDEP surface water screening level (SW SL) of 10 ng/L for PFOS in April 2022. The objective of the groundwater investigation was changed again by KSC to delineate to the U.S. Environmental Protection Agency (USEPA) Regional Screening Levels (RSLs) of 4 ng/L for PFOS; 6 ng/L for PFOA, perfluorononanoic acid (PFNA), and hexafluoropropylene oxide dimer acid (GenX); 39 ng/L for perfluorohexanesulfonic acid (PFHxS); and 601 ng/L for perfluorobutanesulfonic acid (PFBS) in June 2022.

1.3 Report Organization

The remainder of this SAPR is organized as follows:

Section 2.0: Site Description – This section details the site location, previous investigations, lithology, and hydrology and hydrogeology.

Section 3.0: PFAS Site Assessment Methodologies and Activities – This section provides a summary of the field activities completed from November 2021 through August 2022 in support of the PFAS site assessment.

Section 4.0: Data Evaluation and Screening Process – This section details a summary of the groundwater, surface water, concrete, and asphalt results.

Section 5.0: Conclusion and Recommendations – This section details the conclusion of the 2021-2022 PFAS investigation and presents recommendations based upon the results.

Section 6.0: References – This section provides a listing of the documents used in preparing this report.

2. SITE DESCRIPTION

SWMU 114 is located at the southern end of the SLF runway, near Banana Creek. SWMU 114 includes area around Fire Station #2, STP #17, the southern portion of the SLF Runway, RLV Hangar, and the Towway area. Fire Station #2 was constructed in 2008 and currently houses fire station personnel and equipment, including aqueous film forming foam (AFFF). STP #17 was built around 1975 and was demolished in 1998. STP #17 consisted of a small package treatment plant and percolation pond used for effluent disposal. The SLF Runway consists of a 15,000-foot long concrete runway, built in 1975 to serve as the primary end-of-mission landing site for the space shuttle orbiter and as a fully functional airport. The RLV Hangar and Flight Vehicle Facility was built in 2000 and currently houses Starfighters, Inc. aircraft (GeoSyntec, 2019). The Towway connects the southern end of the SLF to Kennedy Parkway.

2.1 Site Location

KSC is centrally located on the east coast of Florida, to the north and west of Cape Canaveral Space Force Station (**Figure 2-1**). It is situated in Brevard and Volusia Counties between the Merritt Island Barge Canal to the south, the town of Oak Hill to the north, the Atlantic Ocean and Cape Canaveral Space Force Station to the east, and the Indian River Lagoon to the west. A large portion of the area, between the Indian River Lagoon and the Atlantic Ocean, is in the northern part of Brevard County on Merritt Island, with the extreme north boundary extending about 7 miles into Volusia County.

SWMU 114 is located on the central portion of KSC, just north of Banana Creek (**Figure 2-2**). The site is located within Sections 1, 2, 11, and 12 of Township 22S, Range 36E which is in the Orsino Quadrangle.

2.2 Previous Investigations

A KSC Center-Wide PFAS SWMU Assessment and Confirmatory Sampling Report was finalized in September 2019 (Geosyntec, 2019). According to interviews with Fire Station #2 facility personnel, AFFF product has been discharged into the stormwater pond to the west of the building during annual testing of equipment.

During Center-Wide PFAS Confirmatory Sampling activities (Geosyntec, 2019) in the vicinity of SWMU #114 (October 2018 through November 2021), 141 groundwater samples were collected from 36 locations, 23 surface water samples were collected from 22 locations, 16 soil samples were collected from 8 locations and 16 sediment samples were collected. Groundwater sample results were compared to FDEP pGCTLs, surface water samples were compared to FDEP Surface Water Screening Levels, and soil samples were compared to FDEP Provisional Soil Cleanup Target Levels. Sediment samples were not compared to a screening level.

No soil samples exceeded the FDEP Provisional Soil Cleanup Target Levels. Widespread exceedances of the screening criteria were reported in groundwater and surface water samples. The highest PFAS concentrations detected were reported in samples collected west of Fire Station #2, north of the SLF Apron and along the Towway.

On February 6, 2020, a spill of 5 to 8 gallons of AFFF was reported on the SLF tarmac during a fire training exercise. The spill was reportedly rinsed off the tarmac with water and impacted two areas southeast and northwest of the tarmac. Fourteen soil samples were collected from the northwest and southeast corners of the SLF tarmac. No soil samples exceeded the FDEP Provisional Soil Cleanup Target Levels.

2.3 Lithology

The subsurface lithology consists of fine to medium sand with interbedded shell hash and some silt to a depth of about 40 feet (ft) below ground surface (bgs). Below 40 ft bgs, a grey green clayey silt is present. Based on previous boring logs in the area, the grey green clayey silt extends to a depth of greater than 100 ft bgs (KSC, 2010). To the southeast and closer to Banana Creek, the grey green clayey silt is encountered at a greater depth of about 60 ft bgs.

Two soil borings were advanced as part of the current PFAS Site Investigation activities (**Figure 2-3**). The borings were located west of Fire Station #2, adjacent to the stormwater retention pond and approximately midway along Towway just to the north. Soil borings were continuously logged to a depth of 60 ft bgs. Both borings included alternating layers of sands and shells with some silt until the grey green clay/silt was encountered. S114-LB02, closer to Fire Station #2, encountered the grey green clay/silt approximately 20 ft higher than S114-LB01 at a depth of 40 ft bgs (-33 ft amsl). This suggests that the grey green clayey silt was eroded closer to Banana Creek from the ancestral St. Johns River.

2.4 Hydrology and Hydrogeology

Surface water drains to interconnected ditches along Towway, Astronaut Road, Kennedy Parkway, and the runway. Runoff from paved lots is directed to these ditches through curb cuts. Culverts between these ditches are slightly elevated above the bottom, causing water to be contained within each ditch until the level is high enough to flow through culverts. Between rain events, water within these ditches evaporates or infiltrates into the subsurface. When surface water flow does occur through these ditches, it is directed to the southeast towards Banana Creek, primarily at the southern end of the runway. Surface water discharging at the southern end of the runway is a combination of surface water from SWMU 114, and areas surrounding the runway including Sharkey Road. Surface water staff gauges were installed at several locations as part of this SWMU 114 investigation. Details of surface water staff gauge installation and gauging results are presented in **Section 3.7** and **Section 4.3**.

Historical groundwater data is not available for the area. Center-wide synoptic groundwater gauging performed by AECOM in October 2020 and February 2021 indicate that the Fire Station #2 is located at a groundwater high with groundwater flowing radially from the Shuttle Landing Facility Apron (AECOM, 2021). **Figure 2-4** depicts the potentiometric surface from AECOM's Prism Report.

As part of the SWMU 114 investigation, newly installed groundwater wells were gauged to determine shallow and intermediate groundwater potentiometric surfaces. Groundwater flow directions were to the west and south with a groundwater divide trending northeast to southwest and intersecting Towway. Additional details on groundwater gauging activities and results are presented in **Section 3.5** and **Section 4.3**.

3. PFAS SITE ASSESSMENT METHODOLOGIES AND ACTIVITIES

Based upon the results of the 2019 Center-wide PFAS site assessment, additional groundwater and surface water sampling was conducted between November 2021 and August 2022 to further investigate the PFAS concentrations at the site. Additionally, concrete and asphalt sampling was performed to investigate suspected release locations. The objective of the sampling was to delineate concentrations in groundwater and surface water using the RSLs for PFOS (4 ng/L), PFOA (6 ng/L), PFNA (6 ng/L), GenX (6 ng/L), PFHxS (39 ng/L), and PFBS (601 ng/L). Sampling locations for samples collected between November 2021 and August 2022 are shown on **Figure 3-1**. The PFAS sampling activities included the following:

- Advancement of two lithologic borings to 60 ft bgs;
- Collection of 124 DPT groundwater samples from 27 locations in and around SWMU 114 for PFAS analysis;
- Advancement and completion of 37 monitoring wells (18 shallow water table wells with screens ranging from 2-12 ft bgs and 5-15 ft bgs and 19 intermediate wells screened between 25 ft bgs and 35 ft bgs);
- Collection of 41 groundwater samples from newly installed monitoring wells for PFAS analysis;
- Gauging of the shallow and intermediate groundwater potentiometric surface;
- Collection of 17 surface water samples from 15 locations from swales and surface water bodies throughout SWMU 114 for PFAS analysis;
- Installation and gauging of 10 staff gauges; and
- Collection of 5 concrete samples from four locations and 1 asphalt sample around Fire Station #2 for synthetic precipitation leaching procedure (SPLP) PFAS analysis.

Field documentation is provided in **Appendix C** and a photographic log is provided in **Appendix D**.

3.1 Soil Core Sampling Activities

Two soil borings were advanced to 60 ft bgs using rotosonic drilling technology in February 2022 at SWMU 114. Lithologic borings were performed to identify site lithology, specifically to identify the depth when the grey-green clay and silt was encountered, and to confirm that DPT samples were collected from the correct horizons. The subsurface materials encountered were characterized using the Unified Soil Classification System. Boring logs are provided in **Appendix C** and a brief description of each boring log is provided below.

- S114-LB01
  - Land surface to 50 ft bgs: sand and shell hash
  - 50 ft bgs to 59 ft bgs: shell hash with greenish grey clayey silt
  - 59 ft bgs to 60 ft bgs: greenish grey silt with minor clay

- S114-LB02
  - Land surface to 43 ft bgs: sand and shell hash
  - 43 ft bgs to 60 ft bgs: grey green clayey silt and silty clay

The grey-green clay and silt is anticipated to act as a semi-confining unit across much of Merrit Island and prevent the downward migration of PFAS. Grey-green clay and silt was encountered in the two borings at a depth of about 40 ft bgs to 60 ft bgs. The semi-confining grey-green clay and silt was encountered at a deeper depth in S114-LB01, closer to Banana Creek. Soil samples were not collected from soil boring locations since deep PFAS impacts were not anticipated in the area.

3.2 PFAS Sampling Protocol

PFAS has been found to be present in many consumer products, including some typically used sampling equipment. Therefore, special precautions were followed to avoid compromising sample integrity during collection. Field sampling methodologies were conducted in accordance with applicable portions of the Standard Operating Procedure (SOP) for Groundwater Sampling with DPT and Analysis of Per- and Polyfluoroalkyl Substances (NASA, 2019a) prepared to guide PFAS sampling activities at NASA sites and HGL's SOP for PFAS Sampling Procedures (HGL, 2020).

The methods and protocols in the SOPs used for collecting and handling PFAS samples were followed to prevent cross-contamination of PFAS from consumer items and field sampling equipment to the samples. Tubing was replaced with new high density polyethylene (HDPE) tubing at each DPT location and interval to prevent cross-contamination. Field quality control samples were also collected to evaluate potential PFAS cross-contamination in the site samples, as discussed in Section 3.6.

3.3 DPT Groundwater Sampling

Ten days of DPT groundwater sampling was performed from November 15 through 19, 2021, from February 21 through 22, 2022, and from June 14 through 16, 2022 to delineate PFAS contamination to the screening criteria. One hundred twenty-four (124) groundwater samples were collected from 27 boring locations (DPT1000 through DPT1026), as presented on **Figure 3-1**. Samples were collected at four depths (3 to 7, 13 to 17, 23 to 27, and 33 to 37 ft bgs) at each location using a peristaltic pump through HDPE tubing from the midpoint of the screen. Two deeper samples (43-47 ft bgs) were collected in June 2022 from DPT1014, DPT1017, DPT1021, DPT1022, and DPT1024 for vertical delineation of PFAS.

Prior to using DPT tooling, the borehole was started using a stainless-steel hand auger to a depth of 5 ft to verify the absence of underground utilities. Groundwater samples were collected by DPT methods using a 4-ft-long stainless-steel retractable screen. New HDPE tubing was used at each sampling depth and location. When the desired sampling depth was reached, the tubing was placed into the borehole through the sampling rods at mid-screen, and the groundwater was purged with a peristaltic pump until the water was visually relatively free of sediment. DPT groundwater samples were then collected and placed in laboratory-provided sample containers. The sample containers were sealed, labeled, packed on ice, and transferred by courier under proper chain-of-custody protocol to the laboratory. The DPT groundwater samples were analyzed for the 25 PFAS analytes by SGS North America Inc. (SGS) by USEPA Method 537M.

3.4 Monitoring Well Installation

Eighteen shallow and intermediate monitoring well pairs (S114-MW0001 through S114-MW0003, S114-MW0005 through S114-MW0013 and S114-MW0015 through S114-MW0020) were installed to monitor groundwater elevations and the PFAS groundwater plume. Planned monitoring well pair S114-MW004 could not be installed due to construction activities in the vicinity and at S114-MW0014 only an intermediate well was installed since records indicated that a shallow monitoring well was present at this location. In general, shallow monitoring wells were constructed so that their well screens intersected the water table and intermediate wells were screened approximately 25 ft to 35 feet bgs. Monitoring well locations are shown on **Figure 2-2** and the screened intervals are shown on the **Table 3-1**.

The monitoring wells were constructed with 1-inch-diameter schedule 40 flush-joint PVC casing and 10-ft of PVC pre-packed well screen. A 20/30 silica sand filter pack was placed in the annular space around the well screens and extended 1-ft above the top of the screen. A 2-ft well seal of 30/65 silica sand was placed above the filter pack. The remaining annular space around the well casing from the top of the well seal to 0.5-ft bgs was filled with Portland cement grout. The wells were completed flush-to-grade in 8-inch diameter bolt-down vaults encased in 2-ft by 2-ft concrete pad. The well construction logs are included in **Appendix C**.

The monitoring wells were surveyed on July 27 and July 28, 2022 by Kugelmann Land Surveying, Inc. to establish the coordinates and vertical elevation of each well. The survey report is included in **Appendix C**.

3.5 Monitoring Well Sampling and Gauging

Forty-one (41) groundwater samples were collected from 37 monitoring wells (18 shallow water table wells with screened intervals ranging from 2 to12 ft bgs and 5 to15 ft bgs; and 19 intermediate wells screened between 25 ft bgs and 35 ft bgs). Samples were collected between August 16 and 19, 2022. Each monitoring well was gauged in a synoptic round on August 3, 2022.

Groundwater samples were collected in accordance with the FDEP's SOPs for Field Activities (FDEP, 2014) and the KSC Sampling and Analysis Plan for the RCRA Corrective Action Program (NASA, 2017b). The depth to water, dissolved oxygen (DO), oxidation-reduction potential (ORP), pH, conductivity, temperature, and turbidity were measured at each well. Prior to sampling, groundwater was purged via low-flow techniques until geochemical parameters were stable. Monitoring well sample logs are included in **Appendix C**. The groundwater samples were submitted to SGS for PFAS analysis by USEPA Method 537M.

3.6 Surface Water Sampling

Seventeen (17) surface water samples were collected from 15 locations across SWMU #114, as identified on **Figure 3-1**. Grab samples were collected from the swales and culvert openings. Surface water samples were collected near the water surface. Surface water samples were collected using a decontaminated HDPE dipper sampler following FDEP SOP guidance. The surface water samples were submitted to SGS for PFAS analysis by USEPA Method 537M.

3.7 Staff Gauge Installation and Measurement Recording

Ten staff gauges were installed on July 27 and 28, 2022 by Kugelmann Land Surveying. Staff gauge readings were recorded on August 3, 2022, in conjunction with the monitoring well gauging event.

3.8 Concrete and Asphalt Sampling

Five concrete samples (four parent and one duplicate) and one asphalt sample were collected on May 5, 2022, around Fire Station #2. Concrete and asphalt samples were collected using a hammer and chisel and were collected from the upper two inches of material. The concrete and asphalt samples were submitted to SGS for SPLP PFAS analysis by USEPA Method 537M.

3.9 PFAS Laboratory Analysis

Following collection, all groundwater, surface water, concrete, and asphalt samples were transferred by courier under proper chain-of-custody protocol to SGS of Orlando, Florida, a National Environmental Laboratory Accreditation Program-certified laboratory for analysis of PFAS using modified USEPA Method 537. All samples were analyzed for the 25 PFAS analytes listed in the tables presented in **Section 4**.

3.10 Investigation Derived Waste

Investigation-derived waste (IDW) generated during the investigation included purge water generated during soil boring advancement, DPT sampling, monitoring well installation and sampling, and decontamination water. The IDW water was added to 15-gallon poly tanks prior to being transferred with the soil cuttings into multiple Department of Transportation-approved 55-gallon drums that were staged on spill pallets at the Components Cleaning Facility IDW storage. Each drum was sampled for PFAS analysis. Analytical results were submitted to the NASA Remediation Project Manager to be used for disposal.

3.11 Field Data Quality

Field quality control samples were collected to ensure sample concentrations are representative of the parent sample concentrations. Field duplicate samples were collected at the same time and location as the parent sample. Field duplicates are collected to assess field and analytical precision as well as sample heterogeneity. One equipment blank sample was collected per day from decontaminated reusable field sampling equipment (DPT temporary screen and rods, dipper and unused tubing). One field blank per day also was collected to assess ambient contamination within the field for potential cross-contamination during sample collection.

4. DATA EVALUATION AND SCREENING PROCESS

The PFAS site assessment data evaluation consisted of determining USEPA RSL exceedances for groundwater at each sample location and depth interval for PFOA, PFNA, PFBS, PFHxS, PFOS, and GenX for groundwater and FDEP SW SL exceedances at each surface water sample location for PFOA and PFOS. Previous investigations included samples from groundwater, surface water, soil, and sediment. These previous samples collected between 2019 and 2021 were compared to current RSLs and FDEP SW SLs. Results for groundwater were compared to the resident tap water RSLs released in May 2022 (USEPA, 2022a). Results for surface water were compared to the FDEP SW SLs developed in April 2020 (FDEP, 2020). Results for soil were compared to the resident soil RSLs released in May 2022 (USEPA, 2022b).

Additional PFAS assessment included comparing the ratios of the 25 analyzed PFAS detected in each sample to assess migration pathways and potential sources. The PFAS analytes, acronyms, and Chemical Abstracts Service numbers are presented in **Table 4-1**. These PFAS ratios are used to develop fingerprints for source areas and track migration from source areas to groundwater and between groundwater and surface water.

Analytical data results collected between November 2021 and August 2022 are presented in **Tables 4-2** through **4-10**. Analytical data results from previous investigations collected between 2019 and 2021 are presented in **Appendix E** in **Tables E-1** through **E-4** and laboratory analytical data packages are provided in **Appendix F**.

4.1 Groundwater

One hundred twenty-four (124) DPT groundwater samples were collected at SWMU 114 from 27 locations. Four depth intervals were sampled at each DPT location to a total depth of approximately 37 ft bgs. DPT locations were selected to delineate the extent of PFAS in groundwater based on previous DPT sample results collected in 2019 and 2021 (**Appendix E, Table E-1**). Results of the DPT PFAS samples are presented in **Table 4-2**. **Table 4-3** presents the frequencies of detections, maximum detected concentrations for all PFAS analyzed, and the number of detections above RSLs. Results of DPT groundwater samples collected between November 2021 and June 2022 are shown in **Figure 4-1**. Additional figures depicting the extent of PFAS compounds in groundwater exceeding RSLs are provided in the Site Assessment Report ADP (**Appendix B**).

Of the 25 PFAS analytes, twelve were detected in groundwater at SWMU 114. The most frequently detected PFAS analyte was PFHxS, which was detected in 72 of 124 samples (58%) with 38 of 124 samples exceeding the PFHxS tap water RSL (39 ng/L). PFOS had more samples exceeding the tapwater RSL than PFHxS, 49 of 124 samples exceeded the PFHxS tap water RSL (4 ng/L), but PFOS was detected in fewer samples than PFHxS (56 samples compared to 72 samples). PFBS was detected in 63 samples, but all samples were below the RSL (601 ng/L). GenX was not detected in any samples; although, it should be noted that the method detection limit for GenX exceeded the tap water RSL of 6 ng/L.

S114-DPT1017, located at the southeast end of Towway, had the highest detected concentrations of most PFAS analytes, including PFOS (14,800 ng/L or 3,700 times higher than the RSL) at a

depth between 13 and 17 ft bgs. DPT samples were not collected adjacent to Fire Station #2 where AFFF was discharged and high PFOS concentrations had been detected previously in PFAS-DPT0003 (60,000 ng/L). These two locations, near Fire Station #2 and at the southeast end of Towway, are separated by multiple DPT sample locations with lower concentrations of PFOS along Towway and are suspected to be associated with separate source areas. PFOS and PFHxS generally make up the largest percentage of PFAS in each sample at SWMU 114.

Forty-one (41) groundwater samples were collected at SWMU 114 from 37 monitoring wells (18 shallow water table wells with screens ranging from 2 to 12 ft bgs and 5 to 15 ft bgs; and 19 intermediate wells screened between 25 and 35 ft bgs). Monitoring well locations were selected based on DPT results and to provide enough spatial coverage to develop groundwater elevation contours for SWMU 114. Results of monitoring well samples are presented in **Table 4-4**. **Table 4-5** presents the frequencies of detections, maximum detected concentrations for all PFAS analyzed, and the number of detections above RSLs. Results of groundwater samples collected in August 2022 are shown in **Figure 4-2**.

Of the 25 PFAS analytes, sixteen were detected in groundwater at SWMU 114. Similarly to the DPT samples, PFHxS was the most frequently detected PFAS (26 of 41 samples) and PFOS had the most number of RSL exceedances (24 of 41). The highest PFAS concentration was detected in S114-MW0015S, located north of the SLF tarmac (28,000 ng/L PFOS or 7,000 times the RSL). Monitoring wells S114-MW0007S, S114-MW0019I, and S114-MW0020S also had PFOS concentrations exceeding 1,000 times the RSL. The highest PFOS concentrations were generally observed in the shallow water table wells, with the exception of S114-MW0019I located near the storm water pond where AFFF was discharged during equipment testing at Fire Station #2.

PFAS ratios in DPT and groundwater samples tend to have higher concentrations of PFOS and PFHxS with lower concentrations of other PFAS. Generally, carboxylates, such as PFOA, make up less than one quarter of the total PFAS concentration in DPT samples. The typical ratios of PFAS observed in groundwater samples are representative of clusters identified by AECOM (2021) for legacy AFFF. Fewer groundwater samples may have been representative of modern AFFF, having a higher PFHxS concentration than PFOS concentration. Modern AFFF samples tended to be located farther from suspected sources near Fire Station #2 and along Towway as well as north of the SLF tarmac. Samples with higher PFHxS than PFOS that were located farther from source areas may be attributed to smaller chain PFAS such as PFHxS (six carbons) moving more rapidly in the environment than longer chain PFAS such as PFOS (eight carbons). Samples with higher PFHxS than PFOS north of the SLF tarmac are likely associated with the AFFF spill of 5 to 8 gallons on February 6, 2020.

4.2 Surface Water

Seventeen (17) surface water samples were collected at SWMU 114 from 15 locations. Surface water sample locations were selected to define the extent of PFAS migration within ditches along roads and to confirm PFAS surface water concentrations observed in previous sampling events (**Appendix E, Table E-2**). Results of surface water PFAS samples are presented in **Table 4-6**. **Table 4-7** presents the frequencies of detections, maximum detected concentrations for all PFAS analyzed, and the number of detections above SW SLs.

Thirteen of the 25 PFAS analytes were detected in surface water at SWMU 114. Of the 13 detected PFAS analytes, PFBA, PFHxS, and PFOS were detected in all 17 surface water samples. Sixteen of 17 surface water samples had FDEP SW SL exceedances of PFOS. Surface water samples had no SW SL exceedances of PFOA. Results of surface water samples collected between November 2021 and June 2022 are depicted in **Figure 4-3**. Additional figures depicting the extent of PFAS compounds in surface water exceeding SW SLs are provided in the Site Assessment Report ADP (**Appendix B**).

S114-SW0003, within the stormwater retention pond west of Fire Station #2, had the highest concentration of detected PFAS. The largest PFAS concentration analyzed in surface water was PFOS (1,740 ng/L in February 2022). PFOS constituted the largest percentage of PFAS at 12 of 15 locations and PFHxS constituted the largest percentage of PFAS at three of 15 locations.

Similar to PFAS ratios for groundwater, surface water ratios tend to have higher concentrations of PFOS and PFHxS with carboxylates comprising less than a quarter of the total PFAS concentration. Surface water samples along Towway and south of the SLF, matched clusters identified by AECOM (2021) for legacy AFFF. Samples north of the SLF tarmac more closely matched modern AFFF clusters with higher PFHxS than PFOS concentrations, likely resulting from the 2020 AFFF spill.

4.3 Water Level Elevations

Eighteen shallow water table wells and seventeen intermediate wells screened between 25 ft bgs and 35 ft bgs were gauged to develop a shallow and intermediate groundwater potentiometric surface on August 3, 2022. **Table 3-1** presents the locations, screened intervals, and water elevations in monitoring wells and read from staff gauges on August 3, 2022. Groundwater potentiometric contours are shown in **Figure 4-4** and **Figure 4-5**. Groundwater flow was similar between the shallow and intermediate depth intervals, generally indicating that groundwater flow is from the northeast corner of the site radially towards the west, southwest, south, and southeast. A groundwater divide appears to be present perpendicular to the center of Towway, approximately coinciding with an area of lower PFAS concentrations.

Vertical groundwater gradients were determined at each monitoring well pair by subtracting the water level in shallow monitoring wells from the level in intermediate wells and dividing by the difference in screen center elevation. Vertical gradients were generally downward across SWMU 114, with upward gradients located near some ditches. Areas with upward vertical gradients may indicate that groundwater is discharging to surface water. **Table 3-2** summarizes the vertical flow direction at each of the monitoring well pairs measured on August 3, 2022.

Ten staff gauges were installed and gauged to determine surface water flow directions and interaction with groundwater. **Figure 4-4** depicts staff gauge readings from August 3, 2022 along with the shallow groundwater table. Surface water elevations within ditches throughout SWMU 114 generally agree with the interpolated shallow potentiometric surface, indicating that surface water and shallow groundwater are in direct communication across the site.

4.4 Concrete and Asphalt

Five concrete samples (four parent and one duplicate) and one asphalt sample were collected for SPLP PFAS analysis from five locations around Fire Station #2 and the Shuttle Landing Facility Apron where AFFF releases were known or suspected . Results of concrete and asphalt samples are presented in **Table 4-8**. **Table 4-9** presents the frequencies of detections, maximum detected concentrations for all PFAS analyzed, and the number of detections above RSLs. Results of concrete and asphalt samples collected in May 2022 are depicted in **Figure 4-6**.

Seventeen (17) of the 25 PFAS analytes were detected in concrete and asphalt samples at SWMU 114. PFOS exceeded tap water RSLs in all six samples and had the highest PFAS concentration in all samples. The asphalt sample, S114-AS0005 had the highest PFAS concentrations, with PFOS detected at 5,340 ng/L. S114-AS0005 is located at the approximate location where AFFF was routinely discharged to the stormwater retention pond. Samples collected closer to Fire Station #2 had lower, but elevated concentrations of PFOS, with higher concentrations on the western portion of Fire Station #2 than on the eastern portion. S114-CS001, at the northwest corner of the Shuttle Landing Facility tarmac, had higher PFOS concentrations than S114-CS0002, located at the southern end of the tarmac.

4.5 Quality Control Samples

Field quality control samples were collected to ensure sample concentrations are representative of the parent sample concentrations. One equipment blank and one field blank per day were collected to assess ambient contamination within the field for potential cross-contamination during sample collection.

Twenty-five equipment and field blanks were collected. All results were below detection limits which indicates no evidence of cross-contamination. Thirteen field duplicate samples were collected. Two analytes exceeded the relative percent difference (RPD) goal of 30% in the one duplicate SPLP concrete sample. All analytes met the RPD goal in all the groundwater and surface water duplicate samples. **Table 4-10** shows the field quality control samples for the PFAS SAPR.

J = The analyte was positively identified, and the associated numerical value is the approximate concentration.
N/A = not established
ng/L = nanograms per lier
RSL = Regional Screening Level
U = The analyte was not detected and is reported at the laboratory limit of detection.
UJ = The analyte was not detected and was reported with a quality control issue at the laboratory limit of detection.

5. CONCLUSIONS AND RECOMMENDATIONS

5.1 Conclusions

Site assessment field activities were conducted at SWMU 114 from November 2021 through August 2022. During the 2021-2022 Site Assessment, 124 direct-push technology (DPT) samples were collected from 27 locations, 17 surface water samples were collected from 15 locations, 41 groundwater samples were collected from 37 newly installed monitoring wells, five concrete samples were collected from four locations, and one asphalt sample was collected. Additionally, two soil borings were advanced to 60 feet for lithologic descriptions, ten staff gauges were installed, and one round of water level measurements were collected from monitoring wells and staff gauges for groundwater flow determination. All groundwater and surface water samples were analyzed for the 25 PFAS analytes by PFAS analysis by USEPA Method 537M. Concrete and asphalt samples were analyzed for the 25 PFAS analytes by SPLP PFAS analysis. The objectives of the PFAS site assessment were to (1) delineate PFAS in groundwater exceeding the RSLs and in surface water exceeding the SW SLs, and (2) better understand the interaction between groundwater and surface water at SWMU 114. This data will be used to support further site investigation activities to improve the understanding of the stated objectives.

Groundwater results were compared to the most recent RSLs published by USEPA for residential tap water (USEPA, 2022a) to determine the extent of PFAS contamination at SWMU 114 for six PFAS analytes (PFOA, PFNA, PFBS, PFHxS, PFOS, and GenX). Surface water results were compared to the FDEP SW SLs (FDEP, 2020) for PFOA and PFOS.

PFAS in groundwater exceeding RSLs extend east and south to Banana Creek and west to approximately the center of the SLF runway (**Figure 4-1** and **Figure 4-2**). The extent of PFAS is approximated to the north, to an area between Sharkey Road and Astronaut Road, where samples below the RSLs do not fully bound SWMU 114. At least two distinct PFAS source areas are apparent from high concentrations of PFAS (PFOS > 4,000 ng/L) located near Fire Station #2 and along Towway, at S114-MW0007S, within SWMU 114. PFAS observed near Fire Station #2 is the result of equipment testing that resulted in AFFF discharge to the stormwater retention pond northeast of the fire station and from a spill five to eight gallons of AFFF to the SLF tarmac on February 6, 2020, that was rinsed off the tarmac to the southeast and northwest. PFAS observed along the Towway is associated with reported releases of AFFF in the area. These two areas of high PFAS concentrations are separated by lower groundwater concentrations in DPTs along Towway near RLF Hangar.

Surface water samples indicated concentrations of PFOS above the SW SL in surface water bodies across the site (**Figure 4-3**). Further assessment and sampling are required to better understand the interaction between groundwater and surface water at SWMU 114.

Groundwater measurements from August 3, 2022, indicate that flow at SWMU 114 is generally similar for the two intervals sampled, the shallow water table and intermediate groundwater screened between 25 ft bgs and 35 ft bgs. A northeast to southwest trending groundwater divide is located near the middle of Towway where groundwater southeast of the divide flows to the south and groundwater northwest of the divide flows to the west (**Figure 4-4** and **Figure 4-5**). The

groundwater divide generally separates the two areas of higher PFAS concentrations and corresponds to an area of higher surface water elevations in staff gauge SG7.

Concrete and asphalt samples collected in May 2022 confirm that a significant release of AFFF occurred near the stormwater pond northwest of Fire Station #2. Asphalt PFOS concentrations near the stormwater pond, in S114-AS0005, were 5,340 ng/L. Additional concrete samples surrounding Fire Station #2 and at the northwest and southeast edges of the SLF tarmac indicate elevated PFOS concentrations (**Figure 4-6**). These results indicate that discharges of AFFF in these locations have infiltrated into asphalt and concrete and may act as a continuing source of PFAS to groundwater and surface water after rain events.

5.2 Recommendations

Additional DPT samples are required to delineate PFAS at SWMU 114 using the USEPA RSLs in groundwater. DPT samples should be located to the west and north of SWMU 114. Samples may need to extend beyond the Former SLF Rescue Building and Morpheous Test Site to delineate PFAS in groundwater using the USEPA RSLs. Select monitoring wells and surface water sample locations should be sampled and gauged quarterly to understand if seasonal impacts are observable, especially in shallow wells near surface water features.

Surface water samples should be collected from additional ditches to further define the extent of surface water impacts at SWMU 114 and extending along the SLF runway. Staff gauges should be gauged quarterly with groundwater gauging to determine surface water flow and interaction with groundwater.

Proposed DPT groundwater sample locations to be used to delineate PFAS to the USEPA RSLs are shown in **Figure 5-1**. Proposed quarterly surface water and monitoring well sampling locations are shown on **Figure 5-2**. Additional DPT groundwater and surface water sample locations will be proposed subsequent to the DPT sampling at SWMU 114 and following the initial sampling results at the Morpheus Test Site, Former SLF Rescue Building Site, and Contractor Support Building #7.

1906-M01	Team	<u>Meeting Minutes and Miscellaneous Items</u> Team consensus reached that revision 1 meeting minutes for the April 2019 Team meeting are final. Team members acknowledged and did not object to the fact that the meeting minutes may become public as part of a final report at a later date. CAMP: please update and get any revised dates to NASA. **Action Item:** Per FDEP correspondence letter dated (March 22, 2019) RPM Ryan O'Meara will provide a site history of the Visitor Center Maintenance Area (SWMU 099) at a future team meeting. **Result**: Decision item 1906-D01, Action Item 1906-A01.
1906-M02	Harlan Faircloth/ CORE	<u>Components Cleaning Facility (CCF) (SWMU 030)</u> **Goal**: Present October 2018 direct push technology (DPT) sampling results, discuss air sparge system expansion activities, present Year 2 Operations, Maintenance and Monitoring (OM&M), present performance monitoring event number 5 and obtain consensus on path forward.

Discussion: The overall corrective action objective for CCF is to reduce concentrations of the contaminants of concern (COC) to below Florida Department of Environmental Protection (FDEP) Groundwater Cleanup Target Levels (GCTL). The objective of the Hot Spot 1 Interim Measure (IM) is to treat the chlorinated volatile organic compounds (CVOC) high concentration plume where concentrations exceed their respective Natural Attenuation Default Concentration (NADC) to support transition to Monitored Natural Attenuation (MNA).

Hot Spot 1 site background and original air sparge system operations were presented at the meeting and in the provided advanced data package.

Year 1 Performance Monitoring:
Twelve monitoring wells were sampled quarterly. A reduction of COCs below NADCs was observed at all wells in the air sparge radius of influence at 9 months.
Periodic DPT sampling was conducted to ensure a full picture of contaminant distribution and concentration.

- July 2018 DPT sampling showing trans-1,2-dichloroethene (tDCE) and vinyl chloride (VC) above NADCs in the gap between the north and south arrays of air sparge wells.
- Additional DPT sampling in August 2018 was conducted to collect deeper samples and refine understanding of contamination in and around the air sparge well gap.

October 2018 DPT Sampling:
The National Aeronautics and Space Administration (NASA) decided to expand the CCF Hot Spot 1 air sparge system to address the High Concentration Plume between treatment lobes and treat deeper intervals in some areas (within the capacity of sparge trailer #3).
Supplemental DPT groundwater sampling in October 2018 to support design of air sparge system expansion.
Areas where cDCE, tDCE, and VC results were above NADCs were delineated (High Concentration Plume).

Hot Spot 1 Air Sparge System Expansion:
Expansion design included 14 new air sparge wells in the area between the lobes of the original air sparge wells and on the upgradient side of the southern lobe. These air sparge wells were

installed in December 2018 using a sonic drill rig and top of screen was set between 44.8 and 54.6 feet (ft) below land surface (BLS).
Eight new performance monitoring wells (IW0063 to IW0070) were installed using a sonic drill rig in February 2019.
The air sparge system expansion was completed in March 2019 (delayed due to government shutdown) and Hot Spot 1 air sparge system was restarted on 13 March 2019.

Year 2 System Performance:
The system has runtime efficiency of 76% from August 2018 through April 2019.

- Actively sparged for approximately 5,568 hours.
- System was down for 1,728.
- All shutdowns have been planned. There has been no downtime for mechanical issues since July 2018.

Performance Monitoring Event 5 was conducted in March 2019.
Twenty monitoring wells sampled for VOCs. Water level measurements were collected from 20 additional monitoring wells.
There were no NADC exceedances for any COC.
TCE detected in seven monitoring wells (1.1 to 16 µg/L); four results exceeded GCTL with the highest concentration in IW0045 in southern air sparge lobe.
cDCE was detected in 18 monitoring wells (0.86 to 250 µg/L); four results exceeded the GCTL with the highest concentration at IW0062 to the east of air sparge system.
tDCE was detected in 17 monitoring wells (2.7 to 200 µg/L); three results exceeded the GCTL with the highest concentration at IW0039 just east of expansion air sparge wells.
VC was detected in 14 monitoring wells (0.96 to 89 µg/L); 13 detections exceeded the GCTL, with the highest concentration at IW0069 on east side within southern expanded system.
Total molar sums for all four COCs were calculated for each of the original 12 performance monitoring wells:

- Baseline Total Molar Sum: 120.7 umol/L
- Performance Monitoring 5 Total Molar Sum: 15.3 umol/L
- 87% reduction in COC total molar sums

Two performance monitoring wells had increase in total molar sums when baseline and performance monitoring 5 sampling events compared (IW0025IS and IW0044).

- IW0025IS is outside of the air sparge system influence, and generally downgradient of the southern lobe.

- IW0044 is on the upgradient edge of the air sparge system, and reflects dissolved VOCs migrating into the system from the east.

Total mass for all four COCs were calculated for the baseline and performance monitoring 5 sampling events.

- Baseline Total Mass: 3.9 pounds
- Performance Monitoring 5 Total Mass: 0.01 pounds
- 3.89 pounds of mass have been removed

Conclusions:

The air sparge system operated reliably over the past 22 months.
Design pressures have been met during Year 2 operations.
Design airflow has been met with the exception of Zone 2, which generally receives 3.5-4 cfm rather than 5 cfm (new Pressure Relief Valve installed earlier this month is intended to improve Zone 2 flow).
COC concentrations are below respective NADCs in monitoring wells within the air sparge system influence.

DPT sampling showed some NADC exceedances, which led to the system expansion.
Mann Kendall statistics for monitoring wells up-, down-, and cross-gradient to the air sparge system identified no increasing trends.

The first post-expansion performance monitoring event will occur the first week of June 2019.
Recommend that air sparge system operations continue until COC concentrations are consistently below NADCs or GCTL exceedances begin to become asymptotic.
To evaluate the effectiveness of the expanded air sparge system, the same network of 20 performance monitoring wells should to be sampled quarterly for the remainder of 2019, after which continued operation should be evaluated. Concurrent water level measurement for 20 additional wells.

NASA anticipates that after sparging is completed at this site, the air sparge system will be excessed.

Team consensus reached to continue OM&M of the expanded CCF Hot Spot 1 air sparge system.

Team consensus on performance monitoring as follows:

- Quarterly 8260B analysis at IW0025IS, IW0037, IW0039, IW0041, IW0042, IW0044, IW0045, IW0046, IW0059 to IW0070.
- Quarterly water level measurements at IW0025IS, IW0037, IW0039, IW0041, IW0042, IW0044, IW0045, IW0046, IW0059 to IW0070, IW0003S, IW0003D, IW0031S, IW0031D, IW0004S, IW0041S, IW0004D, IW0011IS, IW0011ID, IW0011D, IW0021S, IW0017S, IW0026D, IW0036, IW005S, IW0051S, IW0051D, IW0005D, IW0012S, and IW0012D.

Center-Wide Per- and Polyfluoroalkyl Substances (PRL 237)

Goal: Present Phase I Solid Waste Management Unit (SWMU) assessment and confirmatory sampling results for per-and polyfluoralkyl substances (PFAS), present data gaps and proposed sampling locations for additional investigations, and obtain Team consensus on a path forward.

Discussion: A center-wide investigation was conducted for potential PFAS contamination in groundwater and surface water. Sample areas were divided into regions (Northern, Central, and Southern) and samples were collected from suspect source areas and for the purpose of general large-scale delineation. As part of the Phase I assessment, initial Locations of Concern (LOCs) associated with the storage, use, or release of PFAS-containing materials were identified. 464 direct push technology (DPT) groundwater, 3 monitoring well, and 37 surface water samples were collected by Geosyntec within select LOCs to evaluate the presence or absence of affected media. Note that one surface water location was sampled by two methods (direct grab and peristaltic pump); results were similar. Additional activities included:

- Reviewing readily available information and reports related to the use of aqueous film forming foam (AFFF), sewage treatment plants (STPs), and sludge disposal areas (SDAs);
- Completing site reconnaissance and conducting limited interviews with KSC personnel and facility managers at select LOCs; and
- Photographing AFFF storage and use locations.

The strategies for assessment were to:

- Identify a supply well for a decontamination source;

- Evaluate if perfluorooctanoic acid (PFOA) and/or perfluorooctane sulfonate (PFOS) are present in surface water and groundwater at the identified LOCs;
- Evaluate if the concentrations of PFOA, PFOS, and summation of PFOA/PFOS in groundwater exceeded the Florida Department of Environmental Protection (FDEP) provisional groundwater cleanup target level (GCTL) of 70 nanograms per liter (ng/L);
- Evaluate if the concentrations of PFOS, PFOA, and summation of PFOA/PFOS in surface water represent a potential exposure pathway and/or source of constituents to groundwater. There are currently no provisional surface water cleanup target levels.

Sources investigated include fire training facilities, fire stations, suspected AFFF release locations, Kennedy Space Center (KSC) STPs and SDAs, and KSC landfills. Domestic Treatment Plants (DTPs) and production and manufacturing facilities were identified as potential source areas but were not included in Phase I Assessment activities. Limited information was also reviewed on the construction of Ransom Road and Schwartz Road landfills.

Field activities were performed in accordance with FDEP Standard Operating Procedures (SOPs) and project-specific SOPs developed by Geosyntec to limit cross-contamination from consumer products and environmental conditions. Quality Assurance and Quality Control (QA/QC) samples were collected to evaluate laboratory precision, assess sampling equipment for potential sources of PFAS contamination, and evaluate potential impacts from cross-contamination. Duplicate samples and equipment blank samples were collected at an approximate rate of 10 percent. Matrix spike (MS) and MS duplicate samples were collected at an approximate ratio of 5 percent. Field blanks were collected at a rate of 1 per shipping container. A Stage 2A data validation was completed for all collected samples. Groundwater and surface water results were compared to the QA/QC sample results and the following information was reviewed to determine if data was usable to meet project objectives:

- Holding times
- Method blanks
- Laboratory control samples
- Isotope dilution standard

- Equipment sensitivity
- Equipment calibration
- Electronic data deliverable compared to Level IV report
- Reporting limit compared to provisional GCTLs

Validated groundwater data was screened against the FDEP provisional GCTL developed by the University of Florida. Validated surface water data was compared to the provisional GCTLs to identify potential exposure pathways and/or sources that could be contributing PFOA/PFOS to groundwater (or the reverse).

Summary of Center-Wide Results:

As presented during the April 2019 Meeting, Tetra Tech collected samples for PFAS at the Hydrocarbon Burn Facility and Schwartz Road Landfill. Including data collected by both Geosyntec and Tetra Tech, groundwater results exceeded the provisional GCTL in approximately 29 percent of samples. Of the samples collected by Geosyntec in the Northern and Southern regions of KSC, results exceeded the provisional GCTL in approximately 33 percent of groundwater samples. The highest concentrations observed were associated with fire stations and known or likely releases of AFFF. Some STPs and SDAs had concentrations that exceeded 10 times the provisional GCTL. PFOS was generally greater than PFOA, and both PFOS and PFOA were detected in all surface water samples collected.

Based on these results, additional CS activities are warranted to better understand the risks and conceptual site model. Additional sampling locations are proposed for each of the 33 identified LOCs. All surface water and sediment samples proposed are co-located and proposed sediment sample depths are from 0 to 0.5 feet (ft) below land surface (BLS). All soil samples are proposed from 0 to 0.5 ft BLS and 0.5 to 2 ft BLS, unless otherwise stated. DPT groundwater samples depths are proposed at screen centerpoints of 10, 25, 35, and 45 ft BLS.

Summary of Northern Region Results and Proposed Work Plans:

301 DPT groundwater samples from 37 locations, 27 surface water samples, and 3 monitoring well samples were collected. Provisional GCTL exceedances were observed in approximately 32 percent of

samples collected. The groundwater and surface water samples with the highest summation of PFOA/PFOS concentrations were from LOC 2. The highest number of exceedances were observed in the 25 ft BLS samples, but the maximum detected concentration of summation of PFOA/PFOS in the northern area was collected from 10 ft BLS.

LOC 1 – Flight Crew Rescue Training Area (SWMU 005): Used as a heavy equipment yard and materials storage area from 1962 to 1966. From 1984 to 2004, the KSC Fire and Rescue used LOC 1 as a training area for the Space Transportation System rescue procedure. Limited information was reviewed, and no samples were collected for PFAS.

Team consensus reached to continue Solid Waste Management Unit (SWMU) Assessment (SA) activities at LOC 1 to identify potential sources and spills of AFFF associated with the area's use as a KSC Fire and Rescue training area.

LOC 2 – Fire Station #2 (Potential Release Location [PRL] 187): Constructed in 2008 and is used for housing fire station personnel and storing AFFF and equipment. The fire station is currently operational and there have been known releases of AFFF into the retention pond to the west of the building. Groundwater sample results were greater than 100 times the provisional GCTL and surface water detections were more than 700 ng/L. The National Aeronautics and Space Administration (NASA) is working to revise procedures at KSC to no longer release AFFF to the environment.

Team consensus reached to implement proposed sampling work plan to further investigate impacts from AFFF usage at LOC 2 (4 soil, 8 DPT groundwater, and 2 sediment samples at the previous collected surface water locations).

LOC 12 – Former STP #17 and Percolation Pond (PRL 087): Constructed in 1975 to treat domestic waste from the Landing Aids Control Building from the mid-1970s to the 1990s. The building was demolished in 1998 and the percolation pond was abandoned in place. Limited information reviewed on construction/abandonment of the pond (data gap). One groundwater sample was collected near LOC 12 and exceeded the provisional GCTL for summation of PFOA/PFOS.

Team consensus reached to implement proposed sampling work plan to further investigate impacts from STP operations and sludge disposal activities at LOC 12 [4 soil (depths to be determined [TBD]), 1 DPT groundwater, 3 surface water, and 3 sediment samples].

LOC 15 – Remote Launch Vehicle Hanger (PRL 187): Constructed in 2000 to accommodate aircraft. An interview with facility personnel indicated that a foam suppression system was inside the hangar and discharged, but information could not be verified. Past reporting for the hangar indicates a water-supplied system was used for fire suppression within the facility. DPT sampling results surrounding the facility were below the provisional GTCLs.

Team consensus was reached for No Further Action (NFA) at LOC 15.

South Shuttle Landing Facility: Groundwater samples collected were greater than 10 and 100 times the provisional GCTL, and surface water samples had detections above 70 ng/L.

Team consensus reached for sampling plan to further investigate extent of PFAS contamination in the South Shuttle Landing Facility area (10 sediment and 2 surface water samples).

LOC 3 – Former Fire Station #2 (SWMU 105): Constructed in 1967 as the base for crews in VAB, SLF, and LC39 areas. A spill report indicated 2.5 gallons of Class A foam entered a floor drain in the highbay that discharges to grade approximately 30 feet east of the building. Groundwater results near LOC 3 exceeded 10, 100, and 1,000 times the provisional GCTL and concentrations were above the provisional GCTL at all sample depths.

Team consensus reached to implement proposed sampling work plan to further investigate impacts from AFFF usage/discharge at LOC 3 (5 soil, 2 DPT groundwater, and 1 surface water, and 1 sediment samples).

South Vehicle Assembly Building (VAB) Area: Groundwater samples collected exceeded the provisional GCTL at many locations. Surface water samples had detections above 70 ng/L.

Team consensus reached to implement proposed sampling work plan to further investigate extent of PFAS contamination in the South VAB area (3 DPT groundwater, 6 sediment, and 2 surface water samples).

LOC 4 – Fire Station #3 (SWMU 106): Constructed in 1991 and formerly known as Fire Station #6. The facility is currently active and houses fire-fighting equipment and personnel. No known storage, spills, or discharges of AFFF. Groundwater sample results exceeded 100 times the provisional GCTL, and the surface water sample had a detection of 1,593 ng/L.

Team consensus reached to implement proposed sampling work plan to further investigate impacts from potential AFFF usage at LOC 4 (7 soil, 5 DPT groundwater, 5 sediment, and 4 surface water samples).

LOC 5 – Former STP #4 and SDA: Constructed in 1966 and converted to a lift station in 2001. Effluent was discharged into several locations including a polishing pond before discharge into Banana Creek. Land application of effluent occurred in and around KSC from 1986 to 2001 and residuals were reportedly used as cover for Schwartz Road Landfill and transported to Cocoa Beach Wastewater Treatment Plant. Limited information reviewed on the location of all SDAs. Some DPT samples collected exceeded 10 times the provisional GCTL. The highest concentrations were in potential SDAs. Some surface water detections were greater than 70 ng/L.

Team consensus reached to implement proposed sampling work plan to further investigate impacts from STP operations and effluent and sludge disposal activities at LOC 5 (17 soil, 2 DPT groundwater, 2 sediment, and 2 surface water samples) and continue SA to identify locations of SDAs associated with STP #4.

Northern Vehicle Assembly Building: One groundwater sample was greater than the provisional GCTL and PFOS/PFOA was detected above 70 ng/L in some surface water samples.

Team consensus reached to implement proposed sampling work plan to further investigate extent of PFAS contamination in the Northern Vehicle Assembly Building area (6 sediment samples).

LOC 6 – Former STP #5 and Percolation Pond (SWMU 008): Formerly located in within the Launch Complex (LC) 39A area. The STP discharged treated effluent to the swale adjacent to the western perimeter fence and to the evaporation/ percolation pond west of the launch tower. Limited information was reviewed on the construction/abandonment of the pond (data gap). No samples were collected for PFAS at LOC 6.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 6 [5 soil (depths TBD), 2 DPT groundwater, 1 surface water, and 1 sediment samples].

LC39A Area: Four Domestic Treatment Plants were identified, but limited information was reviewed. The surface water sample collected north of LC39A was greater than 70 ng/L.

Team consensus reached to implement proposed sampling work plan (3 sediment and 2 surface water samples) and to continue SA activities to investigate Domestic Treatment Plant operations in the LC39A area.

LOC 7 – Former STP #6 and Percolation Pond (SWMU 009): Formerly located within LC39B to serve structures in and around the pad. The STP discharge treated effluent to the swale adjacent to the western perimeter fence and evaporation/percolation pond west of launch tower. Limited information was reviewed on the construction/abandonment of the pond (data gap). Monitoring well groundwater samples collected north of LOC 7 had detections less than the provisional GCTL.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 7 [5 soil (depths TBD), 1 monitoring well, and 2 DPT groundwater samples].

LC 39B Area: Two Domestic Treatment Plants were identified, but limited information was reviewed. No samples were collected in the LC39B area.

Team consensus reached to continue SA activities to investigate DTPs in the LC39B area.

LOC 8 – Former STP #7 (SWMU 074): Likely located in the Press Site Area, but limited information was reviewed on the historical operations and effluent disposal activities. No samples were collected for PFAS at LOC 8.

Team consensus reached to continue SA activities to further investigate location of former STP #7 and area of effluent and/or sludge disposal.

LOC 9 – Former STP #8 and Drainfield: Constructed in 1978 and replaced with a lift station in 2002. Treated wastewater from operations and logistics building at LC39A and released effluent to drainfield near the STP building. Limited information was reviewed on the construction/abandonment of the pond (data gap). No samples were collected for PFAS at LOC 9.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 9 [5 soil (depths TBD), 1 DPT groundwater, 3 sediment, and 3 surface water samples].

LOC 10 – Former STP #9 and Abandoned Treatment Pond (SWMU 030): Located in the Components Cleaning Facility (CCF) area and constructed in 1967 to support the propellants storage and service area. Operated until 1991 when influent was rerouted to STP #4 (LOC 5). Exact location of former STP building and treatment pond unknown (data gap). One groundwater sample collected near LOC 10 was below the provisional GCTL.

Team consensus reached to continue SA activities to further investigate exact location of former STP #9 and abandoned treatment pond.

LOC 11 – Former STP #12 and Percolation Pond (PRL 074): Formerly located adjacent to the Hazardous Waste Staging Area and

removed some time between 1985 and 1990. The percolation pond was filled and the STP was replaced with a lift station. No samples were collected for PFAS at LOC 11.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 11 [4 soil (depths TBD), 2 DPT groundwater, 1 surface water, and 1 sediment samples].

LOC 13 – Former STP #18 (PRL 216): Constructed in 1973 and used to store fire equipment. Closed in place and demolished by fire in 1991. No information reviewed on effluent or sludge disposal, or storage/use of AFFF. No samples were collected for PFAS at LOC 13.

Team consensus reached to implement proposed sampling work plan (1 soil and 1 DPT groundwater samples) and to continue SA activities to investigate sludge and/or effluent disposal at STP #18 (LOC 13).

LOC 14 – Shuttle Landing Facility Runway (PRL 186): Primary end-of-mission landing site for space shuttle orbiters. Former Microwave Scanning Beam Landing System located at northwest end of the runway and stores fire suppression equipment. Morpheus crash which occurred at the north end was extinguished with AFFF. A vehicle caught fire in 2018 on the west side of the runway, but no additional information was reviewed. Groundwater samples collected near the Morpheus crash were greater than the provisional GCTL and detections in surface water around the north end of the runway were greater than 70 ng/L.

Team consensus reached to implement proposed sampling work plan at (5 soil, 3 DPT groundwater, and 5 sediment samples) and continue SA activities to identify location of former Microwave Scanning Beam Landing System and location of vehicle fire (potential use of AFFF) at LOC 14.

<u>Summary of Central Region Results and Proposed Work Plan</u>:

Approximately 231 DPT groundwater samples, 34 surface water samples, and 66 monitoring well samples were collected by Tetra Tech as of April 2019.

LOC 16 – Hydrocarbon Burn Facility: Results from sampling at LOC 16 were presented by Tetra Tech at the April 2019 KSC Remediation Team meeting.

LOC 17 – Former STP #15 and Polishing Pond (SWMU 016): Used to treat wastewater from the Former Printed Circuit Board Shop and Warehouse Office at Contractor's Road Heavy Equipment Area from 1971 to 1986 and a grease treatment plant from 1986 to 1996. Building abandoned and limited information reviewed on the construction or abandonment of the pond (data gap). No samples were collected for PFAS at LOC 17.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 17 [5 soil (depths TBD) and 2 DPT groundwater samples].

LOC 18 – Schwartz Road Landfill: Results from sampling at LOC 16 were presented by Tetra Tech at the April 2019 KSC Remediation Team meeting.

Summary of Southern Region Results and Proposed Work Plans:

163 DPT groundwater samples from 41 locations and, 10 surface water samples from 9 locations were collected. Provisional GCTL exceedances were observed in approximately 34 percent of samples collected. The groundwater sample collected with the highest summation of PFOA/PFOS concentrations were from LOC 19 and the highest surface water sample was collected in the Region I Stormwater pond located in the eastern Industrial Area. PFOA was greater than PFOS in the two surface water samples collected from LOC 30.

LOC 19 – Fire Station #1 (PRL 122): Formerly Fire Station #4 and constructed in 1964. Active and used as the primary fire/emergency response in the Industrial Area. Houses crews and acts as storage and repair facility for spent or expired fire extinguishers. There were no documented releases of AFFF. Groundwater results exceeded 10, 100, and 1,000 times the provisional GCTL. Step-out samples were collected a large distance from the fire station and results were below the provisional GCTL.

Team consensus reached to implement proposed sampling work plan at LOC 19 (4 soil and 3 DPT groundwater samples).

LOC 20 – STP #1 and SDA (PRL 063): Constructed in 1983. Located within SWMU 067 and received solids from all of KSC from 1986 to 1991. Numerous sewage spills were reported. Soil surrounding STP #1 building was excavated in the past, but limited information was reviewed (data gap). Limited information was reviewed on the construction/abandonment of the polishing pond (data gap). Groundwater sample results were greater than the provisional GCTL, with the highest concentration in the SDA (greater than 10 times the provisional GCTL). Detections in surface water near LOC 20 were greater than 70 ng/L. Team suggested looking at the existing monitoring well network in the area to propose sample collection from monitoring wells.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 20 [17 soil (depths TBD at STP #1 building and former polishing pond), 4 DPT groundwater, 8 surface water, and 9 sediment samples).

LOC 21 – Former STP #2 and Effluent Disposal Area (PRL 086): Treated domestic water and other operation discharges from the Hypergol Maintenance Facility from 1964 to 1985. Effluent was discharged into the borrow pit to the east. One surface water sample was collected within LOC 21 and summation of PFOA/PFOS was 27 ng/L.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 21 (1 soil, 1 DPT groundwater, 2 sediment, and 1 surface water samples).

LOC 22 – Former STP #3 and Percolation Pond (PRL 090): Constructed in 1998 and treated photo-processing wastewater from the TEL-4 Central Telemetry Site. Discharged effluent into to contiguous percolation ponds. Limited information was reviewed on the construction/abandonment of the ponds (data gap). No samples were collected for PFAS at LOC 22.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 22 [5 soil (depths TBD in percolation pond); 2 DPT groundwater, 2 sediment, and 2 surface water samples].

LOC 23 – Former STP #10 and Effluent Disposal Area (SWMU 009): Constructed in 1967 and treated wastewater from the Visitors Information Center Maintenance area and discharged effluent to retention pond, wash water holding pond, and drainage swale. Removed in 1997. Excavated and disturbed areas in the western portion of LOC 23. No samples were collected for PFAS at LOC 23.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 23 (8 soil, 5 DPT groundwater, 2 sediment, and 2 surface water samples).

LOC 24 – Former STP #11 and Percolation Pond (SWMU 086): Located at the former Spaceflight Tracking and Data Network Station and constructed in 1970 to treat wastewater from the former Operations and Support Building. Effluent was discharged into a percolation pond and sludge was hauled off site to an unknown location. Limited information was reviewed on the construction/abandonment of the pond (data gap). No samples were collected for PFAS at LOC 24.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 24 [5 soil (depths TBD in percolation pond) and 2 DPT groundwater samples].

LOC 25 – Former STP #13 and Effluent Disposal Area (SWMU 077): Constructed in 1972 to treat wastewater from Vertical Processing Facility Area. Effluent piped to disposal pond (data gap - construction/abandonment of pond). Facility demolished and removed in late 1970s. No samples were collected for PFAS at LOC 25 but DPT groundwater samples collected in eastern industrial area greater than the provisional GCTLs.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent disposal at LOC 25 (6 soil and 2 DPT groundwater samples).

Eastern Industrial Area: Groundwater results greater than provisional GCTLs (greater than 10 times the provisional GCTL at one location).

Team consensus reached to implement proposed sampling work plan to further investigate extent of PFAS contamination in Eastern Industrial Area (5 sediment samples).

LOC 26 – Former STP #14 and Abandoned Treatment Pond (SWMU 021): Constructed in 1971 to process wastewater from Ransom Road Sandblast Facility and Industrial Area. Drainage ditch adjacent to STP may have impacted site. STP and treatment pond abandoned in place in 1986. No information was reviewed on construction and abandonment of pond (data gap). No samples were collected for PFAS at LOC 26.

Team consensus reached to implement proposed sampling work plan to investigate impacts of STP operations and effluent/sludge discharge at LOC 26 (3 soil, 2 DPT groundwater, 1 sediment, and 1 surface water samples).

LOC 27 – Former STP #16 and Abandoned Treatment Pond: Treated domestic waste from former Bus Maintenance Facility and Former Pass and Identification Building. Effluent was discharged into pond which only received effluent from STP #16. Exact location of former STP and treatment pond unknown (data gap) and additional investigation is warranted. No samples were collected for PFAS at LOC 27.

Team consensus reached to implement proposed sampling work plan to investigate impacts from STP operations and effluent discharge at LOC 27 (1 surface water and 1 sediment sample).

LOC 28 – Central Instrumentation Facility Former Residuals Application Area (PRL 077): Used for disposal of domestic waste sludge from early 1960s to 1986. Received sludge from STP #1 and was reportedly used most frequently in comparison with other disposal sites. One DPT groundwater sampling result was greater than provisional GCTL.

Team consensus reached to implement proposed sampling work plan to further investigate impacts from sludge disposal activities at LOC 28 (2 soil samples).

LOC 29 – Operations and Checkout Building Former Residuals Application Area (PRL 077): Used for disposal of domestic waste sludge from early 1960s to 1986. Land application primarily in grassy areas east and west of parking lot. Received sludge from STP #1. DPT groundwater sampling results were below provisional GCTLs.

Team reached consensus to implement proposed sampling work plan to further investigate impacts from sludge disposal activities at LOC 29 (2 soil samples).

LOC 30 – Kennedy Athletic, Recreation, and Social Park II (PRL 140): Includes recreational facilities, restroom, sanitary leaching field, and pavilion. Site used to stage construction materials, borrow pits for road construction, solid waste containers, landscaping materials, and former underground storage tanks (UST). Spill of fire suppressant foam reported in 1992. Volume and location of spill were not identified, and continued SA is warranted. DPT groundwater sampling results were above the provisional GCTL. PFOA concentrations were greater than PFOS concentrations in surface water samples.

Team consensus reached to implement proposed sampling work plan to further investigate extent of PFAS contamination at LOC 30 (3 DPT groundwater, 4 soil, 3 sediment, and 1 surface water samples) and to continue SA activities to determine the location of reported AFFF spill.

LOC 31 – Ransom Road Sandblast Yard (SWMU 021): Used by NASA as a sandblasting area and painting facility since 1967. Objects are degreased and steam-cleaned prior to delivery. Spill reported in 2008 of approximately 0.25 gallons of 3% Ansulite Firefighting foam from portable tank onto the painted/sealed cement pad in covered garage. Limited information reviewed regarding spill details-continued SA warranted. No samples were collected at LOC 31.

Team consensus reached to continue SA activities to investigate building/location of AFFF spill at LOC 31.

LOC 32 – Base Support Building (SWMU 014): Also known as Maintenance and Operations Building. Constructed in 1964 and includes electrical, mechanical, carpentry, metal, and paint shops, steam cleaning, maintenance area, oil/water separator and treatment pond. Also served as vehicle wash down area. Spill reported in 2006: 20 gallons of foam and water from fire engine plumbing discharged during repairs/maintenance. DPT groundwater sampling results greater than 100 times the provisional GCTL in and around LOC 32.

Team consensus reached to implement proposed sampling work plan to further investigate extent of foam spill impacts at LOC 32 (1 soil, 1 sediment, and 1 surface water sample).

Western Industrial Area: One groundwater sample was collected that was greater than 100 times the provisional GCTL.

Team consensus reached to implement proposed sampling work plan to further investigate extent of PFAS contamination in Western Industrial area (7 DPT groundwater, 1 sediment, and 1 surface water samples).

LOC 33 – Ransom Road Landfill (SWMU 003): Operated from 1964 to 1970 during KSC construction phase. Unlined trenches exposing shallow aquifer were present during landfilling. Information regarding landfill construction was not reviewed. DPT groundwater sampling results were above the provisional GCTL.

Team consensus reached to continue SA activities to investigate landfill construction/trenching at LOC 33.

<u>Conclusions</u>:

The maximum observed concentrations of the summation of PFOA/PFOS were associated with Fire Stations. Generally, concentrations of PFOS and PFOA decreased with depth, with the fewest number of provisional GCTL exceedances were observed in the 45 ft BLS interval. Continued SA and CS activities are recommended and include:

- Investigating additional facilities that were not included under the Phase I assessment or where limited information was reviewed;
- Investigating the identified data gaps from Phase I SA; and
- Identifying existing monitoring wells within the initial LOCs.

Team discussed resampling at previous surface water sample locations to assess potential temporary changes in concentrations. Team also discussed tracking drainage patterns to determine where surface water is coming from for different stormwater ponds, basins, and other water bodies.

NASA discussed the proposed response to the detected exceedances of PFOS and PFOA provisional GCTLs: new KSC policy to no longer discharge AFFF to grade at KSC facilities, except to put out hydrocarbon fires. If AFFF needs to be used, a spill report will be submitted, and an investigation will be conducted. NASA is identifying and responding to PFAS concerns. Non-potable well sampling has been recently conducted on KSC.

Unnumbered Operational Area (UNOA) (PRL 229)
Goal: Summarize confirmation sampling (CS) activities, results, and obtain Team consensus on path forward.

Discussion: This Solid Waste Management Unit (SWMU) Assessment included three non-contiguous areas:
east yard and railroad tie disposal area (RTDA) east of Phillips Parkway and North of Launch Complex 39A, and the Communications Distribution Center & Switching Center (CD&SC) Siding in northwest quadrant of Kennedy Space Center (KSC) Industrial area, adjacent to M6-0138.
The KSC Remediation Team decided to perform a CS at RTDA. There were no concerns identified for the East Yard or CD&SC Siding.

There is no active facility and there are no personnel on site. The area is considered ecological habitat, but screening will be done to human health risk values first. The SWMU assessment identified two large piles of discarded railroad (RR) ties. Those piles were designated as Location of Concern 1 (LOC 1).

Meeting Minutes and Miscellaneous Items

Team consensus was reached that Revision 0 of the meeting minutes and action/decision items for the June 2021 Team meeting will become final. Team members acknowledged and did not object to the fact that these meeting minutes may become public as part of a final report at a later date **(2109-D01).**

Open action items were reviewed by the Team. The following action item was closed out:

Review of Site Status and Deliverables, December 2020: Mike will summarize the look ahead and send a detailed version to Florida Department of Environmental Protection (FDEP) that will provide site histories, what NASA has completed, and where their path forward (including plume maps). FDEP inquired if they could also obtain a copy of the slides being presented today. NASA confirmed they would provide the slides via large file transfer.

Look ahead and maps have been provided to FDEP by NASA **(Closed 2012-A03).**

Area South of K7-0516 and Eastern Component Cleaning Facility Solid Waste Management Unit (SWMU) #030, Interim Measure, Operation, Maintenance, & Monitoring, and Performance Monitoring and Interim Groundwater Monitoring, April 2021: FDEP requested that the sampling plans for 2021 be documented in a

KSC Center-Wide Per- and Polyfluoroalkyl Substances (PRL 237) Locations of Concern, September 2021

Goal: The goal of the ADP is to present the Phase II SWMU Assessment sampling results for per- and polyfluoroalkyl substances (PFAS) and test consensus on a path forward for many of the LOCs and AOPCs. Decisions will be deferred pending further evaluation for some LOCs and AOPCs.

Discussion: The Center-wide PFAS Phase II SWMU Assessment was divided into the northern, central, and southern regions for sampling and recommendations on a path forward. Thirty-three locations of concern (LOCs) and nineteen areas of potential concern (AOPCs) have been identified. There are a total of 52 LOCs and AOPCs plus the Towway Area.

NASA noted that there are 10 LOCs that are in the process of being contracted for investigation as Solid Waste Management Units (SWMUs). The investigations will follow the Site Assessment (SA) procedure under Chapter 62-780.600 of the Florida Administrative Code. NASA plans to move additional LOCs into SA in the future as funding becomes available. Sites are generally prioritized based on PFAS concentrations.

Potential surface water impacts were noted at several LOCs. Note that surface water impacts will be evaluated regionally as well as locally

Sediment samples were collected at several locations and the results are included in the Advance Data Package for reference. Since there are not established or provisional cleanup target levels for sediment, the results retained for future use.

LOC 1 is the former Flight Crew Rescue Training Area. Phase 1 SWMU Assessment and Confirmatory Sampling Report recommended continued SWMU Assessment activities. The area was potentially used to spread residuals from Sewage Treatment Plant #4 (STP #4) (LOC 5). Phase III confirmatory sampling (CS) will include groundwater and soil sampling. Phase III CS is underway and results will be presented at a future meeting. Surface

water samples contained perfluorooctanesulfonic acid (PFOS) concentrations greater than Florida's surface water screening level (SWSL).

LOC 2 is the area of current Fire Station #2 adjacent to the Shuttle Landing Facility (SLF) with its Towway. Phase I and II CS results determined that perfluorooctanoic acid (PFOA) and PFOS concentrations in groundwater exceed Florida's provisional groundwater cleanup target level (pGCTL). Groundwater impacts may be commingled with PFOA and PFOS affected groundwater associated with adjacent LOC 12, Former STP#17, and Percolation Pond. PFOA and PFOS concentrations in soil are greater than Florida's provisional soil cleanup target levels (pSCTLs) for leachability. PFOS concentrations in surface water are greater than the SWSL. Team consensus was reached to proceed with site assessment activities under SWMU #114, Fire Station #2 and Towway Area (includes PRL #237 LOC 2 and LOC 12) **(2109-D14).**

LOC 3 is Former Fire Station #2. Phase I and II CS results determined that PFOA and PFOS concentrations in groundwater exceeded the pGCTL. PFOA concentrations in soil were below the pSCTL; however, PFOS concentrations in soil were greater than pSCTLs for leachability. PFOS concentrations in surface water were greater than SWSL.

NASA added that there is a permitted stormwater basin in the area of LOC 3. Team consensus was reached to proceed with SA activities under SWMU #105, Former Fire Station #2 Area (includes PRL #237 LOC 3) **(2109-D15).**

LOC 4 is Fire Station #3, formerly known as Fire Station #6. Two of four surface water samples planned for the Phase II CS were collected. One proposed location was dry and the other required clearing for access; sampling was deferred. Phase 1 and 2 CS results determined PFOA and PFOS concentrations in groundwater exceeded the pGCTL. In soils, PFOA concentrations were below pSCTL and PFOS concentrations were greater than the leachability pSCTL. PFOS concentrations in surface water was greater than SWSL.

Team consensus was reached to proceed with site assessment activities under SWMU #106, Fire Station #3 Area (formerly known as Fire Station #6; includes PRL #237 LOC 4) **(2109-D16).**

LOC 5 is the former Sewage Treatment Plant #4 and Sludge Disposal Area and the surrounding area north of the Vehicle Assembly Building (VAB). Three additional DPT groundwater sample locations were added to the CS Work Plan to address FDEP's Phase 1 PFAS SWMU Assessment and Confirmatory Sampling Report review letter dated August 25, 2020. Phase I and II CS results determined that PFOA and PFOS concentrations in groundwater exceed the pGCTL. PFOA and PFOS concentrations in soil were below the pSCTL. PFOS concentrations in surface water were greater than SWSL.

Phase III CS (now underway) will investigate the mosquito impoundment area to the north where treated water was discharged and an area where residuals from STP#4 may have been spread. AECOM recommended that LOC 5 be moved under SA for SWMU #115, VAB North Area. AECOM is still finishing out sampling in this area as part of this current investigation.

Team consensus was reached to proceed with SA activities for LOC 5 under SWMU #115, VAB North Area (includes PRL #237 LOC 5, AOPC 3, AOPC 4, and AOPC 10) **(2109-D17).**

LOC 6 is the location for the Former Sewage Treatment Plant #5 and Percolation Pond at Launch Complex 39A (LC39A). Groundwater and soil Phase II CS activities were deferred due to site constraints; sampling will be conducted during the Phase III CS. For surface water, one sample was collected and PFOA and PFOS concentrations were less than SWSLs. After the surface water sampling discussion for LOC 7 (below), Team consensus was reached to collect one surface water sample at LOC 6 from the former percolation pond **(2109-D18).** Phase III CS sampling is underway; the requested surface water sample will be collected during this field event.

LOC 7 is the location of the Former Sewage Treatment Plant #6 and Percolation Pond at LC39B. PFOA and PFOS concentrations in groundwater were below pGCTLs. In the 1 of 5 planned soil

locations sampled, PFOA and PFOS concentrations were below pSCTLS. Four proposed locations were within the former percolation pond, which had standing water. No surface water samples were collected.

FDEP inquired why a surface water sample wasn't collected at this location and a discussion ensued. The pond sometimes contains water and sometimes not. It is believed that some sediment is present.

FDEP stated the surface water sample would be sufficient for now.

Team consensus was reached to collect one surface water sample from the former percolation pond at LOC 7 **(2109-D19).** Phase III CS sampling is currently underway; the requested surface water sample will be collected during this field event. For consistency, a surface water sample was also added for the pond at LOC 6, as described above. NASA asked Tetra Tech to share that PFAS sampling data from site wells in the launch pad areas.

LOC 8 is the Former Sewage Treatment Plant #7 in the Press Site area. SWMU assessment activities were continued to investigate sludge and/or effluent disposal locations associated with former STP #7. Data gap investigations did not reveal where the STP may have discharged to. PFOS concentrations in groundwater exceed the pGCTL. PFOS concentrations in surface water were greater than the SWSL.

Phase III CS recommendations include additional groundwater sampling to further evaluate if the impacts are associated with SWMU #105, Former Fire Station #2 area or an unknown aqueous film-forming foam (AFFF) release location. Forensics indicate a likely AFFF source. Phase III CS includes soil sampling and is underway.

LOC 9 is the Former Sewage Treatment Plant #8 and Drainfield Area in the LC39A Operations Support Building Area. PFOA concentrations in groundwater were less than pGCTL; PFOS concentrations exceed the pGCTL. PFOA and PFOS concentrations in soil were below the pSCTL. For surface water, PFOA

concentration were less than SWSL and PFOS concentrations were greater than SWSL.

Team consensus was reached to proceed with site assessment activities under SWMU #111, LC39 Observation Support Building Area (includes PRL #237 LOC 9) **(2109-D20).**

LOC 10 is the location of the Former Sewage Treatment Plant #9 and Abandoned Treatment Pond north of Converter Compressor Road. Phase II activities identified the abandoned treatment pond location west of where the Phase I CS groundwater sample was collected. Groundwater PFOA and PFOS concentrations there were below the pGCTL. Results from one of two nearby monitoring wells at Components Cleaning Facility (CCF, SWMU #030) exceeded the pGCTL. Recent CCF investigative derived waste (IDW) samples were above pGCTLs. Phase III CS sampling is underway and will include an evaluation of potential data gaps for the groundwater exceedance at CCF.

LOC 11 is the Former Sewage Treatment Plant #12 and Percolation Pond southeast of the intersection of Saturn Causeway and Fluid Servicing Road. The planned DPT location at the former STP was not sampled. The sample conducted at the former percolation pond had results below the pGCTL. In soils (3 of 4 planned locations sampled), PFOA and PFOS concentrations were below pSCTLs. A sample was not collected from the former STP area due to concrete and multiple utilities. For surface water, PFOS concentrations were greater than SWSL. The concentration (PFOS 54.80 ng/L) is similar to other samples collected from the Turn Basin. STP #12 is unlikely to be the source of PFAS detections in the Turn Basin. The source is likely the former Fire Station #2 (PRL #237 LOC 3) due to stormwater conveyance in this region. Surface water impacts will continue to be evaluated regionally to better understand the fate and transport of PFAS in groundwater and surface water. The groundwater sampling at the former STP #12 will be collected and the results will be presented to the Team.

LOC 12 is the Former Sewage Treatment Plant #17 and Percolation Pond near the SLF, which is adjacent to LOC 2. Phase I and II CS results determined that PFOA and PFOS concentrations in groundwater exceeded pGCTLs. Groundwater impacts may be

commingled with PFAS-affected groundwater associated with LOC 2, Fire Station #2. PFOA and PFOS concentrations in soil were below pSCTLs. PFOS concentrations in surface water were greater than the SWSL.

Team consensus was reached to proceed with site assessment activities under SWMU #114, Fire Station #2 and Towway Area (includes PRL #237 LOC 2 and LOC 12) **(2109-D21).**

LOC 13 is the area of the Former Sewage Treatment Plant #18 on Beach Road. SWMU assessment activities were continued to investigate sludge and/or effluent disposal locations associated with former STP #18. Phase II CS groundwater sampling has been delayed due to clearing requirements; groundwater samples will be collected under the Phase III CS effort. For soils, PFOA and PFOS concentrations were below pSCTLs. No surface water was observed and no sampling was recommended. Phase III CS sampling is currently underway.

LOC 14 encompasses the portion of the SLF Runway north of 30th Street NW. It includes the area where the Morpheus lander fire occurred, and possibly the location of the reported vehicle fire. AECOM is continuing to look for information regarding the location of the former Microwave Scanning Beam Landing System which reportedly was on the north end of the SLF and had fire suppression equipment. Multiple Phase I and II CS groundwater samples contained PFOA and PFOS concentrations greater than pGCTLs. In soils, PFOA and PFOS concentrations were above the leachability pSCTL. Multiple surface water samples had PFOS concentrations greater than the SWSL.

The Team discussed the surface water results. The Morpheus test area is a source on the north, but AOPC 1 (Former SLF Fire Rescue Vehicle Building) is near midfield and Fire Station #2 and the Towway (SWMU #114) is at the south. The surface water around the SLF will be evaluated on a regional basis. FDEP agreed this was a good approach.

The Team reached consensus to proceed with site assessment activities for LOC 14 under SWMU #119, Morpheus Test Area (included PRL #237 LOC 14 North) **(2109-D22).**

The central area of the SLF will be further evaluated in conjunction with AOPC 1, Former SLF Fire Rescue Vehicle Building. Phase III CS sampling is underway.

According to interviews. AOPC 1 was used for emergency vehicle parking, former pump testing area for fire rescue activities, and former AFFF storage area. Phase III CS will include groundwater and soil sampling. Team consensus was reached to add two surface water sampling locations. One sample location will be north of the former facility, and the other sample will be collected from the eastern swale along the SLF Runway **(2109-D23).**

LOC 15 is the area of the Remote Launch Vehicle Hangar on the southeast side of the SLF. (Note: sampling results not discussed during the presentation; additional information provided for completeness.)

Sixteen DPT groundwater samples were collected from four locations around the hangar (one from each side) during the Phase I CS. Concentrations of PFOA and PFOS were below the pGCTL in all samples. The maximum detection at 10 ft below land surface (bls) was 24 ng/L at DPT0006; all other samples reported concentrations below detection limits. There were no PFOA or PFOS detections at 25 ft bls. Maximum detection at 35 ft bls was 8.2 ng/L at DPT0024; all other samples reported concentrations below detection limits. Maximum detection at 45 ft bls was 12 ng/L at DPT0006; all other samples reported concentrations below detection limits. Team consensus was reached for no further action during the June 2019 KSCRT meeting (decision item 1906-D07). The area is being further evaluated under SWMU #114, Fire Station #2 and Towway Area (includes PRL #237 LOC 2 and LOC 12).

Towway Area (referred to as South SLF in the Phase I SWMU Assessment and Confirmatory Sampling Report) did not have a LOC or AOPC number assigned. Phase I and II CS results determined that PFOA and PFOS concentrations in groundwater exceed the pGCTL. The highest detection was near the mid-point of the Towway. Groundwater impacts may be commingled with PFOA and PFOS affected groundwater associated with LOC 2, Fire Station #2. PFOA and PFOS concentrations in soil were less than pSCTLs. PFOS concentrations in surface water were greater than the SWSL.

Team consensus was reached to proceed with site assessment activities under SWMU #114, Fire Station #2 and Towway Area (includes PRL #237 LOC 2 and LOC 12) **(2109-D24).**

The Hydrocarbon Burn Facility (SWMU #007) includes **LOC 16** (Hydrocarbon Burn Facility, SWMU #007) and **LOC 18**, Schwartz Road Landfill (SWMU #002). These areas are being evaluated under a separate contract.

LOC 17 is the Former Sewage Treatment Plant #15 and Polishing Pond (SWMU #016). This site is located within the footprint of SWMU #055 (Contractors Road Heavy Equipment Area [CRHE]). Groundwater (1 of 2 planned DPT locations sampled) revealed PFOS concentrations exceeded the pGCTL at the LOC. The eastern DPT location was within an area requiring clearing; sampling deferred. Two CRHE monitoring wells were sampled; results came in below pGCTLs. In soil (1 of 5 planned locations sampled), PFOA and PFOS concentrations were below pSCTLs. The eastern soil sampling locations were within an area requiring clearing; sampling deferred. NASA is having liquid IDW sampled for PFAS; one purpose is to discover the potential presence at existing sites. When the potential for PFAS is found, NASA has begun selecting a set of site monitoring wells to investigate a site further for PFAS.

Team consensus was reached to proceed with LOC 17 site assessment activities under SWMU #055, Contractors Road Heavy Equipment Area **(2109-D25).**

LOC 19 is Fire Station #1 in the Industrial Area. The Phase I and II CS results determined that PFOA and PFOS concentrations in groundwater exceed the pGCTLs. In soils, PFOA concentrations were below pSCTLs and PFOS concentrations were greater than pSCTLs for leachability. There is no surface water in the immediate vicinity of the fire station. Center-wide surface water sampling was conducted within the Industrial Area and the results will be presented at a future meeting.

The briefing made note that a spill of the herbicide Hyvar® had been reported near Fire Station #1. FDEP noted that surfactants are also added as an ingredient to prepare herbicides for application and may not be called out in the herbicide ingredient list. AECOM's research

into this matter concluded that there was one herbicide additive that contains PFAS, but that additive was not used by KSC or Brevard County in herbicide applications.

The Team reached consensus to proceed with site assessment activities under SWMU #116, Fire Station #1 Area (formerly known as Fire Station #4; includes PRL #237 LOC 19); site assessment activities are under contract **(2109-D26).**

LOC 20 is Sewage Treatment Plant #1 and Sludge Disposal Area in the KSC Industrial Area. Soil and groundwater samples were not collected at the former spray field area as planned; sampling was deferred due to clearing being required. Phase I and II CS results from the treatment plant area determined that PFOA and PFOS concentrations in groundwater exceeded the pGCTLs. In soils, PFOA concentrations were below pSCTLs but PFOS concentrations were greater than pSCTL for leachability. PFOS concentrations in surface water were greater than the SWSL. The Team reached consensus to proceed with site assessment activities under SWMU #117, Sewage Treatment Plant #1 and Sludge Disposal Area (includes PRL #237 LOC 20 and PFAS impacts at SWMU #067 [POL Area, M6-0894]) **(2109-D27).**

LOC 21 is the former Sewage Treatment Plant #2 and Effluent Disposal Area in the former Hypergol Maintenance area. Planned surface water sampling was not presented; added here for completeness. PFOA and PFOS concentrations in groundwater were below the pGCTLs. PFOA and PFOS concentrations in soil were below pSCTLs. Phase II work plan included a surface water sample location near the effluent discharge. Sampling was deferred due to physical access constraints. A surface water sample will be collected during the Center-Wide surface water sampling event planned for October 2021. A surface water sample was collected ~800 feet north of this LOC from the adjacent borrow pit; the PFOA result was below and the PFOS result above the SWSL. NASA withdrew the no further action recommendation for this site pending the results of regional surface water sampling in its vicinity.

LOC 22 is the former Sewage Treatment Plant #2 and Percolation Pond at the Central Telemetry (TEL-4) facility. PFOA and PFOS concentrations in groundwater were below the pGCTLs. PFOA and

PFOS concentrations in soil were below pSCTLs. PFOS concentrations in both surface water samples were greater than its SWSL, and increased with proximity to the Banana River. Results are comparable to detections reported elsewhere in the Banana River. The groundwater and soil results indicate STP #2 is unlikely to be the source of PFAS detections in the Banana River. Surface water impacts will continue to be evaluated regionally to better understand the fate and transport of PFAS in groundwater and surface water. Team consensus was reached for no further action for LOC 22 **(2109-D28).**

FDEP sought clarification for LOCs/AOPCs adjacent to a surface water body where soil and groundwater samples were collected but not surface water samples; would surface water sampling be performed if soil and groundwater results were below provisional CTLs? NASA stated that it expects regional surface water sampling to fill in potential data gaps. Swales, ditches, and canals intersect with the lagoons and may be pathways for PFAS exchange with the lagoons. More investigation will be performed. NASA and FDEP both recognized there are potential sources of PFAS in the lagoon systems other than KSC, and acknowledged that there is currently only a small set of screening levels to guide an investigation.

LOC 23 is the former Sewage Treatment Plant #10 and Effluent Disposal Area within the boundary of SWMU #099 (Visitors Center Maintenance Area). PFOS and PFOA concentrations in groundwater were above the pGCTLs. PFOA and PFOS concentrations in soil were below pSCTLs. PFOS concentrations in surface water were below SWSL. Team consensus reached to proceed with site assessment activities under SWMU #099, Visitors Center Maintenance Area **(2109-D29).**

LOC 24 is former Sewage Treatment Plant #11 and Percolation Pond (SWMU #016) on S Band Road. PFOS concentrations in groundwater exceeded the pGCTLs. PFOA and PFOS concentrations in soil were below pSCTLs. PFOS concentrations in surface water was above the SWSL. Team consensus was reached to proceed with site assessment activities under SWMU #120, Former Treatment Plant #11 and Percolation Pond **(2109-D30).**

LOC 25 is former Sewage Treatment Plant #13 and Effluent Disposal Area on the southeast side of the Industrial Area. Groundwater results from one location were below PFOA and PFOS pGCTLs. Soil samples results were below pSCTLs. Phase III CS includes groundwater and soil sampling to further evaluate the effluent disposal pond area.

LOC 26 is former Sewage Treatment Plant #14 and Abandoned Treatment Pond. This location is currently part of SWMU #021 (Ransom Road Sandblast Yard), which is also PRL #237 LOC 31. Groundwater samples from 1 of 2 planned locations had PFOA and PFOS concentrations below the pGCTLs. A sample location within the pond was dropped due to standing water. The sample location at the former STP was shifted to the west to be representative of both site features. For soils, PFOA and PFOS concentrations were below pSCTLs for the one location sampled. Two sample locations within the pond were not collected due to standing water. The PFOS concentration in surface water was above the SWSL. Team consensus was reached for no further action for LOC 26 with further surface water assessment proceeding as part of LOC 31 **(2109-D31).**

LOC 27 is the Former Sewage Treatment Plant #16 and Abandoned Treatment Pond at the former badging facility on the west side of the Indian River . The surface water PFOS result was greater than the SWSL. Phase III CS recommendations include groundwater and soil sampling, which will help evaluate whether STP #16 is a source for the surface water PFOS.

FDEP inquired if there are other NASA surface water data for the Indian River. NASA confirmed there were three samples that came back under 10 ng/L. There is an action item to give FDEP the surface water sample results for the Indian River **(2109-A02).**

LOC 28 is the former Residuals Application Area near the former Central Instrumentation Facility. Phase I and II CS results determined that PFOA and PFOS in groundwater exceeded pGCTLs. Forensics indicate a likely AFFF source. PFOA and PFOS concentrations in soil were below pSCTLs.

Phase III CS groundwater sampling is currently underway.

LOC 29 is the former Residuals Application Area near the Operations and Checkout Facility. Phase I and II CS results determined PFOA and PFOS concentrations in groundwater were below pGCTLs. PFOA and PFOS concentrations in soils were below pSCTLs. Phase III CS recommendations include groundwater sampling, which is currently underway.

LOC 30 is KARS Park II. SWMU assessment activities were continued to determine the location of the reported AFFF spill there; a spill location could not be confirmed. One additional DPT groundwater sample location was added to Phase II to address FDEP's Phase 1 PFAS SWMU Assessment and Confirmatory Sampling Report review letter dated August 25, 2020. Phase I and II CS results determined that PFOA and PFOS concentrations in groundwater were above the pGCTLs. PFOA and PFOS concentrations in soils were below pSCTLs. PFOS concentrations were above the SWSL in surface water. Team consensus was reached to proceed with site assessment activities under SWMU #118, KARS Park II Area **(2109-D32).**

LOC 31 is Ransom Road Sandblast Yard (SWMU #021), a documented AFFF spill location. LOC 26 (Former STP #14) is at the southwest corner of LOC 31. SWMU assessment activities were continued to further investigate the location of the AFFF spill. No Phase II sampling was conducted in the Sandblast Yard, but two groundwater monitoring wells were sampled at adjacent SWMU #010 (GSA Reclamation Yard). PFOA exceeded pGCTL in one of those samples. Phase III CS includes groundwater, soil, surface water and sediment. The SWSL exceedance at LOC 26 will be addressed under LOC 31. The investigation will also help confirm whether the PFAS exceedance at SWMU #010 is associated with LOC 31. Phase III sampling is underway.

NASA added that site groundwater was previously closed out for SWMU #021 (Ransom Road Sandblast Yard), and wells at this location had been abandoned based on that. Soil land use controls remain in place.

LOC 32 is the location of Base Support Building (SWMU #014; formerly known as Maintenance & Operations Building). This location is a known AFFF spill location. The seven DPT

groundwater locations, the two sediment sample locations, and the two surface water sample locations were sampled during the Phase II CS. Phase I and II CS results determined PFOA and PFOS concentrations in groundwater were above the pGCTLs. In soils, PFOA was below pSCTLs; PFOS was above the leachability pSCTL. PFOS concentrations were above its SWSL in surface water. Team consensus was reached to proceed with site assessment activities under SWMU #014, Base Support Building (includes PRL #237 AOPC 12 and LOC 32) **(2109-D33).**

LOC 33 is Ransom Road Landfill (SWMU #003). SWMU assessment activities were continued to further investigate landfill construction and trenching. No Phase II sampling was performed. PFOA and PFOS concentrations in the Phase I groundwater samples exceeded the pGCTLs. No soil or surface water samples have been collected at this site to date.

Team consensus was reached to proceed with site assessment activities under SWMU #003, Ransom Road Landfill **(2109-D34).**

FDEP inquired about potential dewatering at leased facilities.

NASA responded that they have instituted LUCs at all the PFAS LOCs and AOPCs with PFAS data so that construction activities receive environmental review. In some cases, NASA has reached out to FDEP to coordinate and gain approval to percolate fluids back into site groundwater during construction projects. In one such case, former FDEP representative John Winters asked that a construction discharge area near the Mobil Station be identified as an AOPC, which was done. NASA is working to make sure the construction contractors are not discharging to surface water. FDEP expressed their appreciation for these efforts.

DAY 3

2109-M10 – Randy Sillan/AECOM

Mobile Launch Platform Rehabilitation (MLP) Sites and VAB Area Hot Spot #3 (SWMU 056), September 2021

Goal: The goal is to present 2021 direct push technology (DPT) groundwater sampling results from the Hot Spot 3 area and gain Team concurrence of the path forward. Field efforts summarized in the ADP include sampling for chlorinated volatile organic compound (CVOC) analysis. The objective of the ADP is to present current site conditions that support additional interim measures.

Discussion: Taking advantage of a lull in construction activities at the MLP, 188 DPT groundwater samples were collected at 62 locations and analyzed for CVOCs to evaluate current site conditions. A subset of samples was also analyzed for parameters useful in evaluating bioremediation. CVOC results confirm that the 2017 emulsified vegetable oil injections and bioaugmentation interim measure (IM) has decreased CVOC mass and shrunken the plume footprint. A small area with elevated trichloroethene (TCE) concentrations indicate a source is likely still present. The geochemical parameters indicate that aquifer conditions may be limiting enhanced reductive dechlorination. The recommended path forward is to utilize in situ chemical reduction (ISCR) by emplacing a product that enhances biotic and abiotic reduction of CVOCs for a long period (5 or more years), and maintains optimal conditions by limiting methanogenesis and managing sulfate reduction and sulfide accumulation. Preparation of an IM Work Plan is the next step.

FDEP requested clarification regarding the footprint and depths of the 2017 IM and conceptual treatment area for additional treatment. AECOM stated that concentrations above NADC are in similar locations now as prior to the 2017 IM, but the CVOC concentrations are lower compared to 2017. Since the groundwater flow is toward an Outstanding Florida Water, FDEP asked if a consideration had been given to expanding the existing air sparge system, which might be more quickly implemented since there is an infrastructure in place. NASA described the difficulties with accessibility and construction in the adjacent crawlerway and the highly compacted ground around the MLP. FDEP noted that the underground injection

control component of the proposed ISCR IM may require public notice.

The Team reached consensus to proceed with an IM Work Plan to implement ISCR to treat key CVOCs (TCE, cis-1,2-dichloroethene [cDCE], and VC) exceeding their respective NADC (TCE greater than 300 ug/L, cDCE greater than 700 ug/L, and VC greater than 100 ug/L) **(2109-D35).**

KSC Center-Wide Per- and Polyfluoroalkyl Substances (PFAS) Investigation, Areas of Potential Concern (AOPC), September 2021

As a general note, NASA stated that the confirmation sampling that was performed or is planned at these AOPCs is for purposes of determining the presence or absence of PFAS. If there are detections, then the location will move into site assessment (SA) and at that time the extents of the PFAS will be determined. If media were not sampled prior, the SA is where that would get picked up.

Center-wide surface water sampling was conducted within the Industrial Area and other regional areas. The regional results will be presented at a future meeting.

AOPC 1 is the former Fire and Rescue Building at the Shuttle Landing Facility (SLF). It was used for emergency vehicle parking during landings, former fire pump testing, and former aqueous film-forming foam (AFFF) storage according to interviews. Phase III CS will include groundwater and soil sampling at this location. FDEP requested that a surface water sample be collected from the ditch by the AOPC on the east side of the landing strip. NASA inquired if a sample should also be collected for the swale north of Sharkey Road? FDEP concurred. The Phase III sampling results will be presented to the Team.

AOPC 2 is the former Contractor Support Building #7 north of the VAB area. According to interviews, this location was a former storage area for AFFF materials. A groundwater sample collected from this area during the Phase I CS revealed PFOA and PFOS

concentrations in groundwater exceeded Florida's provisional groundwater cleanup target level (pGCTL). Phase III CS includes groundwater and soil sampling in the direct area of the former facility.

The Team agreed to add a surface water sample immediately adjacent to the former Contractor Support Building #7. Team consensus reached to proceed with site assessment activities at AOPC 2 based upon the Phase I CS results. A SWMU name and number will be assigned **(2109-D36).**

AOPC 3 is the Orbiter Processing Facilities (OPF) 1 and 2. Aerosol cans of Scotchgard, a chemical containing PFAS, were utilized as part of the orbiter thermal protection system. Over 5,000 cans were used for each orbiter from approximately 1981-1986. Phase III CS includes groundwater and soil sampling and is underway.

FDEP inquired if the Team has PFAS results for investigative derived waste (IDW) from the AOPC 3 area? NASA stated that they have had detections of PFAS in IDW from this vicinity. As will be discussed for OPF 3, there were PFAS exceedances from monitoring wells.

Team consensus was reached to proceed with site assessment activities for AOPC 3 under SWMU #115, VAB North Area (includes PRL #237 Location of Concern [LOC] 5, AOPC 3, AOPC 4, and AOPC 10) **(2109-D37).**

AOPC 4 is OPF 3. This location was investigated for the potential use of Scotchgard™ on the orbiters. Interviews indicated Scotchgard™ and other PFAS-containing materials were not used at this facility. A shallow OPF 3 monitoring well, OPF-IW006S, was sampled in June 2021 and reported elevated detections of PFOS. The source of the PFAS is unknown; a forensics evaluation will be performed on the groundwater samples to be collected under AOPC 10, Crawlerway Residuals Disposal Area. The AOPC 10 boundary includes a portion of AOPC 4 and the area of monitoring well OPF-IW006S.

FDEP inquired if the footprint for AOPC 10 has now expanded to include AOPC 4? AECOM responded that both AOPC 4 and AOPC

10 will be investigated under the larger SWMU #115. Team consensus was reached to proceed with AOPC 4 site assessment activities under SWMU #115, VAB North Area (includes PRL #237 LOC 5, AOPC 3, AOPC 4, and AOPC 10) **(2109-D38).**

AOPC 5 is the Thermal Protection Facility. This location was investigated for the potential use of Scotchgard™. Interviews indicated Scotchgard™ and other PFAS-containing materials were not used at this facility. A groundwater sample was collected in June 2021 from a shallow monitoring well located near the northeast corner of the facility from monitoring well WCPC-IW0013S. Results showed PFOA and PFOS concentrations were less than pGCTLs.

Team consensus was reached for no further action at this AOPC 5 **(2109-D39).** Note: Area is within the SWMU Boundary for SWMU #115, VAB North Area (includes PRL #237 LOC 5, AOPC 3, AOPC 4, and AOPC 10). The overall area will be further evaluated under SWMU #115.

AOPC 6 is the location of the current Logistics Facility (K6-1547). According to interviews, this facility was a former AFFF storage location and may have stored other PFAS-containing materials. No samples have been collected to date. Phase III CS includes groundwater, soil, surface water, and sediment sampling and is underway.

AOPC 7 is the location of the current Components Refurbishment and Chemical Analysis Facility (SWMU #041). The site was investigated for the potential use of PFAS-containing chemicals. The chemical database indicates potential PFAS precursors are utilized. The PFOS concentration in a groundwater monitoring well sample (CRCA-MW0003) exceeded the pGCTL. No soil or surface water samples have been collected to date at this location. Team consensus was reached to proceed with AOPC 7 site assessment activities under SWMU #041, Components Refurbishment and Chemical Analysis Facility **(2109-D40).**

AOPC 8 is the Central Supply Warehouse in the Industrial Area. Fire Station #1 (PFAS SWMU #116) is adjacent to the east and Sewage Treatment Plant #1 is on the block southeast of the

warehouse. According to interviews, this is a current and former storage area for AFFF materials. For groundwater, portions of the AOPC were previously investigated under PRL #237 LOC 19, and monitoring well sampling was conducted nearby at the Communications, Maintenance, and Storage Facility (SWMU #082). PFOA and PFOS concentrations in groundwater were less than pGCTLs in those samples. Additional groundwater samples will be collected during the Phase III CS.

This area is within the SWMU Boundary for SWMU #116, Fire Station #1 Area (formerly known as Fire Station #4; includes PRL #237 LOC 19). PFAS above the provisional groundwater cleanup target levels (pGCTL) have been confirmed at SWMU #116.

FDEP requested clarification on the distinction between AOPC 8 and SWMU #116. NASA explained there were groundwater exceedances associated with the fire station, and direct push technology step-out samples on the north side of the supply warehouse had results under provisional values. The SWMU #082 well that was sampled is to the west of the warehouse. The Phase II sampling is focused on the loading dock where it is believed PFAS-containing materials may have been located. The area to the south of the fire station and Central Supply Warehouse is being investigated under SWMU #117, Sewage Treatment Plant #1.

AOPC 9 is Weather Site 509, reportedly used for testing fire engine pumps. Phase III CS recommendations include groundwater, soil, and surface water sampling. Phase III CS sampling is underway.

AOPC 10 is the former Crawlerway Residuals Disposal Area. From the 1960s until 1986, the area north of the VAB was used for disposal of domestic waste residuals from STP #4 (LOC 5). Phase III CS includes groundwater and soil sampling, and sampling is underway. PFAS-affected groundwater is present within the AOPC boundary. A shallow OPF 3 monitoring well, OPF-IW006S, was sampled in June 2021 and reported elevated detections of PFOS. The source of the PFAS is unknown and a forensics evaluation will be performed on the groundwater samples to be collected under AOPC 10. This area is within the SWMU Boundary for SWMU #115. Team consensus was reached to proceed with AOPC 10 site

assessment activities under SWMU #115, VAB North Area (includes PRL #237 LOC 5, AOPC 3, AOPC 4, and AOPC 10) **(2109-D41).**

AOPC 11 is the Bus Wash Station within KSC Visitors Center. This area was investigated due to the potential that PFAS-containing chemicals may have been used at the bus wash station. Phase III CS recommendations include groundwater sampling, which is currently underway. This area is within the SWMU boundary for SWMU #099, Visitor Complex Maintenance Area (includes PRL #237 LOC 23 and AOPC 11). Site Assessment activities at AOPC 11 will proceed under SWMU #099.

AOPC 12 is the Vehicle Wash Station at the former GSA Automotive Facility. This area was investigated due to the potential that PFAS-containing chemicals may have been used at the vehicle wash station. Phase III CS includes groundwater sampling and results will be presented at a future meeting; sampling is currently underway. This area is within the SWMU boundary for SWMU #014, Base Support Building Area (formerly known as M&O Building; includes PRL #237 LOC 32 and AOPC 12). PFOA and PFOS concentrations above the pGCTL are present in the groundwater in the vicinity of AOPC 12.

NASA stated that the elevated PFAS in this area and most likely will get wrapped up into SWMU #014. Team consensus was reached to proceed with AOPC 12 site assessment activities under SWMU #014, Base Support Building (includes PRL #237 AOPC 12 and LOC 32) **(2109-D42).**

AOPC 13 is the Q6 Radar Station (SWMU #113). Potential concerns were identified based on presence of PFAS in investigative derived waste (IDW). SWMU assessment activities were conducted and no PFAS sources were identified. Phase III CS recommendations include groundwater and surface water sampling and results will be presented at a future meeting; sampling is currently underway.

AOPC 14 is the Security Training Center on west Schwartz Road. This area was investigated based on a study showing this area had the highest concentrations of PFOA in KSC alligator blood samples. Records reviews and interviews did not confirm the use or storage of

potential PFAS containing chemicals or materials at the Training Center. Two Center-wide surface water samples were collected from the surface water bodies surrounding this facility and results were below SWSLs. FDEP inquired if anything else was located around the training center? NASA responded that it is isolated. Center-wide sampling is developing regional information for surface water, and more data will be collected. The Team reached consensus for no further action at AOPC14 **(2109-D43).**

AOPC 15 is the former Crawlerway Residuals Disposal Area near Saturn Causeway. From the 1960s until 1986, an area south of the Saturn Causeway west of Pad A was used for disposal of domestic waste residuals from STP #4 (LOC 5). Phase III CS recommendations include groundwater and soil sampling. Phase III CS results will be presented at a future meeting; sampling is underway.

AOPC 16 is KARS Park 1 (SWMU #084). SWMU assessment activities were conducted to identify PFAS sources due to elevated PFOS detections in surface water samples collected by Brevard County near KARS Park 1. No PFAS sources have been identified. Phase III CS recommendations include surface water sampling and results will be presented at a future meeting; sampling is currently underway.

AOPC 17 encompasses the Merritt Island National Wildlife Refuge Visitors Information Center Pump House (Abbreviated information was verbally conveyed during the presentation; additional information provided here for completeness.) Eleven non-potable water supply wells were sampled at KSC for the presence of PFAS in 2019. All analytes were below laboratory detection limits in five wells. A PFOS concentration of 10.55 ng/L was reported in the Pump House well. This non-potable well had the highest PFOS detection, so NASA designated it as an Area of Potential Concern to determine if PFAS containing chemicals were utilized or stored in the vicinity of this well. Forensics review indicate the source was likely not site-related; probably an artifact of well construction.

FDEP inquired if the source was Teflon™ casing in the wells, and NASA confirmed that to be the fact. NASA stated that the original wells installed at this location had Teflon casing. FDEP stated they

presume the construction materials for sampled wells are being recorded for this investigation A site may be revisited at a later date, and we want to be sure pertinent information is carried forward.

The Team reached consensus for No Further Action at AOPC 17 **(2109-D44).**

AOPC 18 is the Citgo Service Station. A manhole, located on the west side of the service station, was dewatered by a NASA contractor to complete tasks under their Safety & Reliability Upgrades contract. PFAS affected groundwater is present to the west and southwest of the manhole. A dewatering work plan was provided to FDEP for their concurrence, and the discharge area was designated an AOPC at FDEP's request based on their review. Phase III CS includes groundwater and soil sampling, and Phase III CS results will be presented at a future meeting; sampling is currently underway. This area is within the SWMU Boundary for SWMU #116, Fire Station #1 Area (formerly known as Fire Station #4; includes PRL #237 LOC 8 and LOC 19).

FDEP and NASA discussed dewatering activities in general. Dewatering manholes is a common practice. Where NASA is aware of PFAS, they disclose this information to the contractors for protection of both human health and the environment. NASA confirmed that the Remediation Program reviews environmental checklists in advance of construction activities that produce Records of Environmental Consideration (RECs) to provide necessary information to the construction projects.

AOPC 19 is the Contractor Support Building #6, located in the Roads and Grounds Facility (SWMU #073) immediately south of the Contractors Road Heavy Equipment Area (SWMU #055). Records reviews and interviews did not substantiate storage of AFFF or other potential PFAS source, including fluorinated pesticide products. FDEP asked about the level of certainty that no PFAS-containing materials had been stored or used at the Support Building. NASA replied that the Roads and Grounds personnel who use the facility have no recollection of any suspect materials being stored here. FDEP inquired surrounding facilities and whether there were PFAS investigations nearby. There is a PFAS assessment slated for the Contractors Road Heavy Equipment area, and if results lead the

investigation toward the Support Building the investigation will expand in that direction. Team consensus was reached for no further action at AOPC 19 **(2109-D45).**

Regional
Additional DPT groundwater samples and surface water samples were collected outside of these LOC or AOPC areas to evaluate extents of PFOA and PFOS affected groundwater and surface water. Notable findings include DPT0130 north of the OPF 3 (AOPC 4) and the Crawlerway, which had a PFOA and PFOS concentration of 5,160 ng/L at 25 ft below land surface. The source of PFAS-affected groundwater is unknown at this time. This result prompted NASA to investigate the use of aviation grade hydraulic fluid at KSC. Skydrol™, or similar hydraulic fluids, were not used per interviews and Material Safety Data Sheet search. Also noted was an area on the east side of the VAB (DPT0107) that has increasing PFOS and PFOA concentrations with depth. This area will be further evaluated under PRL #237. Now that we have seen PFAS increasing in depth at this location, we have incorporated deeper wells into the assessment program.

Converter Compressor Building (SWMU #089), DPT Update and Proposed Monitoring Wells, September 2021

Goal: The presentation goal is to provide the results of the direct push technology (DPT) sampling and consequent proposed monitoring well locations associated with February 2021 KSCRT Decisions 2102-D28, D30, D35, and D36, which are listed in the discussion below:

Discussion: DPT sampling was conducted in March 2021 at the areas of MWs 56, 96, and 133. DPT sampling was proposed the area of MW0114 but the area was flooded during the 2021 DPT event; therefore, sampling was postponed in that area.

In February 2021, the Team reached consensus to conduct DPT downgradient of MW056 to determine the extents of the LCP and

Meeting Minutes and Miscellaneous Items

Team consensus was reached on January 6, 2022 (via email to all members of the Kennedy Space Center Remediation Team [KSCRT]), that Revision 1 of the meeting minutes and action/decision items for the November 2021 Team meeting would become final. Team members acknowledged and did not object to the fact that these meeting minutes may become public as part of a final report at a later date. The minutes were finalized and sent by email to all parties on January 6, 2022.

Open action items were reviewed by the Team. The following action item was closed out:

Wilson Corners (Solid Waste Management Unit [SWMU] 001) High Concentration Plume (HCP) Site Characterization and Revised Air Sparge (AS) System Layout, September 2021: NASA will send historic groundwater sampling data to the Florida Department of Environmental Protection (FDEP).

This data was provided by the National Aeronautics and Space Administration (NASA) to FDEP on November 9, 2021, during the last KSCRT meeting **(Closed 2109-A01).**

Center-Wide Per- and Polyfluoroalkyl Substances (PRL #237) Phase III Solid Waste Management Unit Site Assessment and Confirmatory Sampling Report Summary, January 2022

Goal: The purpose of the ADP is to summarize Phase III site assessment activities and results.

Discussion:

The Center-Wide Phase I Solid Waste Management Unit (SWMU) Assessment of per- and polyfluoroalkyl substances (PFAS) was completed in 2018-2019. At that time, 33 Locations of Concern (LOCs) were identified and Confirmatory Sampling (CS) of groundwater (GW) and surface water (SW) only were completed. KSC was divided into three different regions for the purpose of future discussions (northern, central, and southern).

Results presented from the Phase I investigation led to a recommendation of No Further Action (NFA) for one LOC, and CS activities for the remaining 32 LOCs. NFA was recommended for LOC 15, the Remote Launch Vehicle Area.

Center-wide Phase II SWMU Assessment and CS of PFAS was completed in 2020-2021 with the continued assessment of 30 LOCs (assessment of the other two LOCs is continuing under another project). Phase II addressed data gaps, and focused on identifying other PFAS sources. Surface water and sediment sampling were conducted within watersheds spread throughout KSC; direct push technology (DPT) GW and soil sampling were conducted within selected LOCs; and additional DPT sampling was completed in areas to the east and south to determine if a PFAS contamination plume is present near the KSC secure boundary. These data were used to identify Areas of Potential Concern (AOPCs), LOCs where NFA was warranted, LOCs where additional CS was warranted, and LOCs where proceeding to Site Assessment (SA) was warranted. Data collected during PRedictive Integrated Stratigraphic Modeling (PRISM™) were used to make additional observations. Results were presented in the Center-Wide PFAS PRL #237 Phase II Solid Waste Management Unit Assessment and Confirmatory Sampling Report Summary presented to the KSC Remediation Team (KSCRT) in September 2021 with additional CS recommended for selected LOCs and AOPCs.

Three LOCs and four AOPCs were approved for No Further Action following the Phase I/Phase II Assessment and CS. They are LOC #15 (Remote Launch Vehicle Area), LOC #22 Former Sewage Treatment Plant (STP) #3 and Percolation Pond, LOC #26 Former STP #14 and Abandoned Treatment Pond, AOPC #5 Thermal Protection Facility, AOPC #14: Security Training Center, AOPC #17: Merritt Island National Wildlife Refuge Visitors Information Center Pump House, and AOPC #19 Contractor Support Building #6. Note that LOC 16 - Hydrocarbon Burn Facility (HBF) and LOC 18 - Schwartz Road Landfill (SRLF) are being evaluated by Tetra Tech and not covered in this ADP.

Fifteen LOCs and six AOPCs proceeded to site assessment following the Phase I/ Phase II SWMU Assessment and CS. Phase III CS included sampling at 14 LOCs, 11 AOPCs, and 14 monitoring wells outside AOPCs and LOCs.

For those locations for which no further action (NFA) is recommended in this presentation, a Site Rehabilitation Completion Order (SRCO) will not be requested. The intent of an NFA recommendation is that the Team just will not be pursuing any additional assessment at that particular location.

LOC #13 is the location of the Former Sewage Treatment Plant #18. CS activities included four groundwater samples (different intervals) collected from one DPT location in the apparent location of the former facility. Perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS) concentrations were below Florida's provisional Groundwater Cleanup Target Levels (pGCTLs) in all sampled intervals. In Phase I/II, a soil sample from that location had no detections of PFAS.

FDEP inquired if there was any surface water nearby this location. AECOM confirmed no surface water was nearby. A ditch runs along Beach Road, but NASA confirmed this ditch is not co-located with the area that we are concerned with.

The Team reached consensus for No Further Action (NFA) at LOC #13, Former Sewage Treatment Plant #18 **(2201-D02).**

AOPC #1 is the location of the Former Shuttle Landing Facility (SLF) Fire and Rescue Vehicle Building. Activities included 16 groundwater samples collected at four DPT locations. Concentrations were above pGCTLs in all DPT locations, with the maximum concentrations in PFAS-DPT0217 at 8 ft bls. Six soil samples were collected from three soil boring locations. PFOA

concentrations were below provisional Soil Cleanup Target Levels (pSCTLs) in all samples and depths. PFOS concentration were above pSCTLs in all samples and depths, with the maximum PFOS concentration at SB0100 (0-0.5 ft bls). Two surface water samples were collected from this area, as requested by FDEP in the September 2021 KSCRT meeting. PFOA concentrations were below Florida's surface water screening levels (SWSLs) and PFOS concentrations were above SWSLs in both locations.

FDEP inquired if this location is proximal to the Space Florida activities that are taking place for the satellite manufacturing location. NASA stated this is north of that location currently, by approximately 1.5 miles. Construction is approximately 6,500 ft away. The reality is that some construction could migrate in this direction. In addition, the utility corridor work is extending up to Sharkey Road. However, it is far east of this location.

NASA has shared PFAS sampling results and DPT concentrations with Space Florida so they can work together on the dewatering and make sure we are on the same page. Their contractor also has experience with this contaminant and are trying to avoid dewatering if at all possible. We will discuss further in the future once they come up with their construction plan.

The Team reached consensus that AOPC #1 -Former SLF Fire and Rescue Vehicle Building (J5-1299) will move to SWMU Assessment **(2201-D03).**

AOPC #2 is the location of Contractor Support Building #7. Eight groundwater samples were collected from two DPT locations. Concentrations were below pGCTLs in all intervals for DPT0222. Maximum concentrations in PFAS-DPT0221 at 23 ft bls were PFOA+PFOS 512.2 ng/L. Four soil samples were collected from two soil boring locations. PFOA and PFOS concentrations were below pSCTLs in both depth intervals in both locations. Two surface water samples were collected with PFOS concentrations above SWSL in both locations.

The Team reached consensus that AOPC #2 -Contractor Support Building #7 will move to SWMU Assessment activities **(2201-D04).**

LOC #5 is the location of the Former STP #4 and Sludge Disposal Area. Concentrations at this location in groundwater and surface water samples were above pGCTLs and SWSLs. The site will be advancing to SWMU Assessment under SWMU #115 (Northern VAB), which is currently underway.

FDEP inquired where we are with the work plan for SWMU #115?

NASA inquired if it is FDEP's expectation to get formal work plans for these locations? NASA wanted to get these investigations moving, but can retroactively submit work plans if needed. The intent is to bringing data to FDEP incrementally. The most important thing was to start and work is following a 62-780 approach.

FDEP stated by going this route, you run the risk of the State arriving at an endpoint different than what you assume it is now. As an example, what if the GCTL ultimately was 30 ng/L instead of 70 ng/L? NASA responded that they are just trying to get a big picture view using a 70 ng/L line and see what kind of regulations come along. Either the data will be good or will require fine-tuning. NASA recognizes that this will not likely be a final delineation. NASA believes this is what the agency will do as a whole. Proximity to surface water bodies is an additional consideration. FDEP welcomes the information gathering, but cautioned that the regulatory pathway hasn't been established.

AOPC #3 is the location of the OPF 1 and 2. Sixteen groundwater samples were collected from four DPT locations. Concentrations were below pGCTLs in three locations. Maximum concentration of PFOA+PFOS at PFAS-DPT0258 was 261.8 ng/L. Eight soil samples were collected from four soil borings with no$ perfluorooctanesulfonamide (PFOSA) detected in the samples. (PFOSA was a key ingredient in Scotchguard™, which is known to have been used at the OPFs in the past.) PFOA and PFOS concentrations below the pSCTLS for all locations and depth intervals. AOPC #3 will be assessed under SWMU #115 (northern VAB), which is currently underway. Concrete samples will be collected during SWMU Assessment activities.

AOPC #10 is the location of the Crawlerway Residuals Disposal Area. Sixteen groundwater samples were collected from four DPT locations. Concentration were below pGCTLs in three locations, but the pGCTL was exceeded at PFAS-DPT0229 (8 ft bls) with the result of PFOA+PFOS of 100.2 ng/L. No PFOSA was detected in select samples. AOPC #10 will be assessed under SWMU #115 (northern VAB), which is currently underway.

LOC #1 is the location of the Flight Crew Rescue Training Area (FCRTA). Eight groundwater samples were collected from two DPT locations; both locations contained exceedances of pGCTLs. Four soil samples were collected from two soil boring locations. PFOA

and PFOS concentrations were below pSCTLs in both depth intervals at both locations. The Team reached consensus that LOC #1 (FCRTA) will move to SWMU Assessment activities **(2201-D05).**

FDEP asked about the additional surface water samples that were to be collected at this location. NASA stated the samples were obtained with a boat, and regional surface water information will be presented to FDEP. They have also since learned when the fire trucks were parked out here their trucks sometimes leaked and they will sample at those locations. Mike Deliz will send to Anne Chrest where the fire trucks parked north of LOC #1 for launches.

LOC #8 is the location of the Former STP #7 site. Three groundwater samples were collected from one DPT location. PFOS and PFOA concentrations were below pGCTLs in each depth interval for this location. Two soil samples were collected from one soil boring location (SB0113). PFOA and PFOS concentrations were below pSCTLs in both depth intervals.

The Team reached consensus that LOC #8 – Former STP #7, will move to SWMU Assessment activities **(2201-D06).**

LOC #10 is the location of the Former STP #9 and Abandoned Treatment Pond. Four groundwater samples were collected from one DPT location. Concentrations were below pGCTLs in all depth intervals. Eight soil samples were collected from four soil boring locations. Concentrations were below pSCTLs in both depth intervals.

The Team reached consensus for No Further Action at LOC #10 – Former STP #9 and Abandoned Treatment Pond. PFAS at the Components Cleaning Facility (CCF) will be further investigated under existing SWMU #030 (CCF) **(2201-D07).**

LOC #11 is the location of Former STP #12 and percolation pond. Eight groundwater samples were collected from two DPT locations. PFOS and PFOA concentrations were below pGCTLs in all depth intervals for both locations. The Team reached consensus for No Further Action at LOC #11 – Former STP #2 and percolation pond **(2201-D08).**

LOC #6 is the location of the Former STP #5 and percolation pond at Launch Complex (LC) 39A. Seven groundwater samples were collected from two DPT locations. PFOS and PFOA concentrations exceeded the pGCTL in one location at DPT 0257 (PFOA + PFOS = 123.4 ng/l). Four soil samples were also collected from two soil

boring locations; concentrations were below pSCTLs in both intervals for PFOA and PFOS. A surface water sample was collected from within the pond at the request of FDEP (September 2021 KSCRT meeting). PFOA concentration was below SWSL and PFOS results were 44.9 ng/L. The Team reached consensus for LOC #6 – Former STP #5 and percolation pond to be further investigated under existing SWMU #008 (LC 39A) **(2201-D09).**

LOC #7 is the location of the Former STP #6 and percolation pond at LC 39B. NFA had previously been requested for this LOC on the basis of groundwater and soil results, but FDEP recommended surface water samples. Surface water samples were collected from within the pond in Phase III. PFOA concentration was below SWSL and PFOS results were 20.5 ng/l.

The Team reached consensus for No Further Action at LOC #7 – Former STP #6 and percolation pond. PFAS is being further investigated under existing SWMU #009 (LC 39B) **(2201-D10).**

AOPC #15 is the location of the Crawlerway Residuals Disposal Area Saturn Causeway Site. Eight groundwater samples were collected from two DPT locations. PFOA and PFOS concentrations were below pGCTLs for all depth intervals in both samples. FDEP requested clarification if only groundwater was sampled at this location. AECOM confirmed only groundwater was sampled at this AOPC; there had been no earlier sampling during Phases I and II.

The Team reached consensus for No Further Action at AOPC #15 – Crawlerway Residuals Disposal Area Saturn Causeway **(2201-D11).**

AOPC #6 is the location of the Logistics Building. Twelve groundwater samples were collected from three DPT locations. PFOA and PFOS concentrations were below pGCTLs at two of the three locations. Maximum concentration of PFOA + PFOS (161.8 ng/l) was identified at PFAS-DPT0248 at 8 ft bls.

The Team reached consensus that AOPC #6 – Logistics Facility will move to SWMU Assessment activities **(2201-D12).**

AOPC #9 is the location of Weather Site 509, where fire truck pumps were reportedly tested. Three groundwater samples were collected from one DPT location and identified exceedances at two intervals. Two soil samples were collected from one soil boring location. Concentrations at the shallow interval were below pSCTLs. PFOA did not exceed pSCTL in the deeper interval. The PFOS result was 0.0076 mg/kg at the deeper interval, which is above the

leachability pSCTL. One surface water sample was collected with the results of PFOA below SWSL and PFOS at 31.9 ng/l.

The Team reached consensus that AOPC #9 – Weather Site #509 will move to SWMU Assessment activities **(2201-D13).**

DPT locations outside of LOC and AOPC boundaries consisted of 20 groundwater samples from five DPT locations. These samples were intended to help identify potential sources for prior pGCTL exceedances with no clear source. Maximum PFOS concentrations were identified in PFAS-DPT0252 (east of the VAB) and PFAS-DPT0255 (east of the Flight Crew Rescue Training Area).

The Team reached consensus that DPT 0252 and DPT0255 will be incorporated into SWMU boundaries for nearby sites and will advance to SWMU Assessment activities **(2201-D14).**

LOC #28 is the location of the Central Instrumentation Facility former residuals application area. Four groundwater samples were collected from one DPT location. Maximum concentrations at 8 ft bls were PFOA + PFOS at 165.6 ng/l. One surface water sample was collected north of this LOC. PFOA concentrations were below SWSL, and PFOS result was 108 ng/l.

The Team reached consensus that LOC #28 – Central Instrumentation Facility Former Residuals Application Area will move to SWMU Assessment activities **(2201-D15).**

LOC #29 is the location of the Operations and Checkout Former Residuals Application Area. Four groundwater samples were collected from one DPT location. PFOA and PFOS were below pGCTLs in all sampled intervals.

The Team reached consensus for No Further Action at LOC #29 – O&C Former Residuals Application Area **(2201-D16).**

AOPC #8 is the location of the Central Supply Warehouse. Four groundwater samples were collected from one DPT location. PFOA and PFOS were below pGCTLs in all sampled intervals. Two soil samples were collected from one soil boring location. Concentrations were below pSCTLs in both intervals.

NASA stated that the red boundary (PFAS LOC) in the figure on slide 90 is for the fire station, and not for Central Supply. We can get you the figures we are investigating. We will put that together and get it to you **(2201-A01).**

The Team reached consensus for No Further Action at AOPC #8 – Central Supply Warehouse **(2201-D17).**

AOPC #12 is the location of the Vehicle Wash Station at the Former General Services Administration (GSA) Automotive Facility. Four groundwater samples were collected from one DPT location. Maximum concentrations of PFOA + PFOS are located at the 43 ft bls interval at 5,327 ng/l. Site assessment activities at this location are already underway under SWMU #014 (Base Support Building), which encompasses this area.

AOPC #18 is the location of the Dewatering at Mobil Service Station site. Four groundwater samples were collected from one DPT location. PFOA and PFOS were below pGCTLs for all depth intervals. Two soil samples were collected from SB0125. Concentrations were below pSCTLs.

FDEP inquired if any existing monitoring wells around this location were sampled as part of this investigation. NASA stated they were only looking at the dewatering area, and it was a concern due to the proximity to the fire station. FDEP approval for dewatering as long as we sampled afterward to confirm no migration. There are no monitoring wells in the vicinity of where the discharge took place. Monitoring well MW0012 is the closest and located underneath the service station canopy. Total PFAS at this monitoring well at last sample was 19 ng/L. Total PFAS at the monitoring well located at the intersection of the two roads close by was 16.2 ng/L. Another monitoring well MW0029 located across the road has a result of 16.5 ng/L.

The Team reached consensus for No Further Action at AOPC #18 – Dewatering at Mobil Service Station **(2201-D18).**

LOC #27 is the location of the STP #16 and Abandoned Treatment Pond on the west side of the Indian River Bridge. Four groundwater samples were collected from one DPT location. PFOA and PFOS were below pGCTLs for all depth intervals. Eight soil samples were collected from four soil borings. Concentrations were below pSCTLs in all samples and depth intervals.

FDEP inquired how the Team is incorporating the exceedance of the SWSL in a Phase 1?ii surface water sample from this site? NASA responded that they are noting the exceedance and waiting as the State develops additional guidance on PFAS in surface water. The surface water result seems unlikely to be related to the former STP based on the soil and groundwater results.

The Team reached consensus for No Further Action at LOC #27 – STP #16 and Abandoned Treatment Pond **(2201-D19).**

LOC #31 is the location of the Ransom Road Sandblast Yard (RRSY), which had a small, reported spill of aqueous film-forming foam in 2008. Twelve groundwater samples were collected from three DPT locations. PFOA and PFOS were below pGCTLs for all locations and depth intervals. Six soil samples were collected from three boring locations. Concentrations were below pSCTLs in all samples and depth intervals. Surface water samples were collected in four locations around this LOC. PFOA concentrations were below SWSL in all surface water samples collected. Maximum PFOS concentration above the SWSL at PFAS-SW0136 with a concentration of 76.6 ng/l. That location is at the southwest side of the GSA Reclamation Yard (SWMU #10), which is immediately west of the RRSY. Three sediment samples were collected and co-located with the surface water samples taken. Maximum PFOA and PFOS concentrations were located in PFAS-SD0088.

FDEP inquired if that surface water exceedance falls within SWMU #10 boundary. NASA stated they have to update the SWMU boundary to the south to cover this area.

The Team reached consensus for No Further Action at LOC #31 – RRSY. PFAS at GSA Reclamation Yard (GSRY) to be further investigated under existing SWMU #010 (GSRY) **(2201-D20).**

LOC #26 is the location of the Former STP #14 and Abandoned Treatment Pond. While NFA had previously been approved, surface water samples were collected from within the pond as requested by FDEP at the September 2021 KSCRT meeting. PFOA concentrations were below SWSL; PFOS concentrations were 23.2 ng/l.

The Team reached consensus for No Further Action at LOC #26 – Former STP #14 and Abandoned Treatment Pond. PFAS at GSA Reclamation Yard (GSRY) to be further investigated under existing SWMU #010 (GSRY) **(2201-D21).**

LOC #21 is the location of the Former STP #2 and Effluent Disposal Area in the far southwest of the Industrial Area. One surface water sample was collected from this area. PFOA concentrations were below SWSL; PFOS concentrations were 13 ng/l. One sediment sample was collected from this area as well. PFOA and PFOS concentrations were less than 0.00032 mg/kg.

FDEP inquired what will be done with the surface water sample result? NASA doesn't believe the STP is associated with the

exceedance. The location will remain as part of the center-wide surface water investigation. FDEP asked if there are any plans for resampling going forward for orphan sites? NASA stated they will keep this holistic view of the center and these "orphan" locations. When the State releases surface water CTLs the path forward will be clearer.

The Team reached consensus for No Further Action at LOC #21 – Former STP #2 and Effluent Disposal Area **(2201-D22).**

LOC #25 is the location of the Former STP #13 and Effluent Disposal Area also in the far southwest of the Industrial Area. Eight groundwater samples were collected from two DPT locations. Concentrations within all intervals at one location were below pGCTLs. Maximum concentrations within PFAS-DPT0240 at 23 ft bls were PFOA + PFOS at 76.8 ng/l. Four soil samples were collected from two soil boring locations. Concentrations were below pSCTLs in all samples and depth intervals. One surface water sample was collected at LOC #25. Results were below the SWSLs.

The Team reached consensus that LOC #25 – Former STP #13 and Effluent Disposal Area will move to SWMU Assessment activities **(2201-D23).**

AOPC #16 is the location of KARS Park I. Three surface water samples were collected. PFOA concentrations were below SWSL; maximum PFOS concentrations were located in SW0108 at 46.6 ng/l.

FDEP inquired what is the interpretation of the results of SW108? SW108 was collected northeast of the ballfields from an east-west ditch. NASA noted to the west there is a subdivision, and also the river can come up into this area when it is high because it is tidally connected. Sometimes this ditch is dry. FDEP inquired if the other locations sampled that came in lower were also tidally connected to the river. NASA confirmed they were; SW106 and SW107 were collected from the east-west ditch that is north of Hall Road. All the samples were collected that same day. There is no industrial activity at this site, the most intense use is camping and launching boats. FDEP stated that it would make sense to go back and collect another sample. NASA agreed they could take another sample at SW108 and samples to the east and to the west. That may help identify the source of the PFAS. NASA will update the summary table for KARS Park I and email back out to the Team **(2201-A02).**

The Team reached consensus for additional SWMU Assessment at AOPC #16 – KARS Park I **(2201-D24).**

AOPC #13 is the location of the Q6 Radar Station. Two monitoring wells were sampled at Q6 Radar Station following detection of PFAS in an investigative derived waste (IDW) sample. The results for the shallower well (MW0003) were below the pGCTLs. PFOA + PFOS at MW0001 was 296 ng/l. One surface water was collected from this area. PFOA and PFOS concentrations were below SWSLs. FDEP inquired about other investigations at the site. NASA owes FDEP an update on Q6 Radar Station (SWMU #112), so they will put together an ADP to review the RFI we completed **(2201-A03).**

The Team reached consensus that additional SWMU Assessment activities for AOPC #13 – Q6 Radar Station will be conducted to determine the source **(2201-D25).**

Monitoring wells SAEE-MW0002 (west of the Base Support Building) and A3RB-MW003 (near the South Repeater Building) were sampled. This was done because of prior results indicating the potential for PFAS impacts. Results were PFOA + PFOS at 1,122 ng/l and 1,763 ng/l at the two locations. Four groundwater samples were also taken from one DPT location outside of any PFAS LOC or AOPC; in this case at the South Repeater Building. The maximums concentrations of PFOA were below pGCTLs. PFOS results were PFOS was 252 ng/l.

FDEP inquired whether the PFAS is suspected to be related to the electrical equipment? NASA replied the source for SAEE-MW0002 is strongly suspected to be the Base Support Building, where there are high groundwater results for PFAS. The South Repeater Building is not co-located with the SAEE location. Confirmatory sampling was conducted under the site name of Area 3 Repeater Building (A3RB) and a soil interim measure was completed. After discovering PFAS in IDW and then groundwater at that site, the Fire Chief was contacted. He reported that during a wildfire, AFFF was applied here to protect the asset. The site closure request that was pending under the site name of A3RB is being withdrawn because of the discovery of PFAS. A PFAS site assessment is a high priority at the South Repeater Building/A3RB because it is near KSC's boundary.

FDEP asked how this information gets put into the conceptual site model. AECOM stated it has not been incorporated yet.

The Team reached consensus that the PFAS assessment at the South Repeater Building (formerly known as Area 3 Repeater Building) will be investigated under SWMU #122 South Repeater Building **(2201-D26).**

NASA noted that because there are so many PFAS sites, further assessment is being prioritized. We will first fund the highest concentrations (sites with groundwater results currently over 1,000 ng/L are under contract), and the others will be addressed as we have funding available. NASA believes there are 39 sites that require additional assessments.

<u>Launch Complex 39A Operations Support Building Area (AOSB) SWMU #111 Construction Completion, January 2022</u>

Goal: The purpose is to summarize site history along with an overview of the Interim Measure Work Plan, air sparge system installation activities timeline, lessons learned, and path forward.

Discussion:
The ADP provided a brief summary of AOSB's history as well as the plume delineation (per KSCRT Decision 1806-D05), the Interim Measure Work Plan (IMWP) that was approved by FDEP May 2021, and activities associated with the air sparge system installation, startup, and first quarter operations and monitoring. The area of groundwater contaminated by trichloroethene (TCE), cis-1,2-dichloroethene (cDCE) and vinyl chloride (VC) above Florida's groundwater cleanup target levels (GCTLs) is the target of the IM. Cleanup to GCTLs is the objective of the IM in order to protect the adjacent Outstanding Florida Water (OFW).

Field activities associated with installation began February 9, 2021 and concluded June 2, 2021. System startup began June 8, 2021 and full-scale operations began July 12, 2021. Baseline sampling was conducted in May 2021 and first quarter sampling was conducted in October 2021.

Program Update

Discussion: The #1 issue at the Florida Department of Environmental Protection (FDEP) is the staffing situation. There are fourteen positions in the federal facilities program currently available. Some hires are imminent. Environmental Administrator Laura Barrett resigned. The goal is to fill the Environmental Administrator position by the end of October. Billy Hessman joined in May as a professional geologist (PG) II position. A variety of positions are open and need to be filled. If there is an urgent matter, please call Bruce directly and he can talk in the moment about it. The routine review process may take a while.

NASA inquired if funding was the issue or just not enough people were applying. FDEP stated it has been hard to attract and retain staff. FDEP is still using the three contractors for outside review and will lean heavily on them in the short term.

to groundwater has been observed through the comparison of the ratios of PFAS analytes.

2023 Investigation Focus

The 2023 SLF PFAS investigation will treat KARS Park II and the Base Support Building a single study area (Western Industrial Area). The primary focus of the 2023 investigation will be on groundwater/surface water interactions. 2023 activities will include DPT groundwater sampling, monitoring well installation and sampling, staff gauge installations and surface water sampling. Water level measurements, staff gauge readings, surface water and groundwater samples will be collected on a quarterly basis from select locations.

FDEP inquired if we are sampling the water body north of the borrow pit? HGL responded that there is not a sample there. FDEP inquired if the water body is intermittent?

HGL stated that there is a surface water body. It was a difficult area to reach. NASA stated that clearing is an option if necessary. NASA took an action item to add a surface water sample there **(2210-A10).**

Regarding the overall Industrial Area, HGL did see a hydraulic divide between the Base Support Building and the Fire Station1/Sewage Treatment Plant 1 area. NASA added that there is commingling and we will likely have one Industrial Area program eventually.

<u>Fire Station #2, Former Sewage Treatment Plant #17, and Towway Area (SWMU 114)</u>

Goal:

The objective of the advance data package (ADP) is to summarize the site history and per- and polyfluoroalkyl substances (PFAS) Site Assessment activities and results for the Fire Station #2, Former Sewage Treatment Plant #17, and Towway Area. These locations are in the Shuttle Landing Facility (SLF) area.

Discussion:

Space Florida is building a road on the east side of the SLF which required dewatering. The dewatering plan was coordinated with FDEP. FDEP inquired if dewatering from the construction operations encroach on the SWMU boundary?

NASA called attention to the site layout on Slide 4. North of the apron area is where the dewatering occurred previously, and the effluent discharge locations are shown. Further north, at Sharkey Road, there is a PFAS release location where construction is planned. NASA will provide a dewatering plan for that area to FDEP in the near future. The dewatering of PFAS-containing groundwater is not affecting any area that FDEP is not already aware of.

NASA added there were sample locations with PFAS results above screening levels further to the east and west. This group of sites may eventually become one site under the SLF.

Site History Overview

Solid Waste Management Unit (SWMU) 114 is located at the southern end of the SLF near Banana Creek. SWMU 114 includes Fire Station #2 (Center-wide PFAS Investigation Location of Concern [LOC] 2), Former Sewage Treatment Plant (STP) #17 (LOC 12), the southern portion of the SLF Runway (LOC 14), Remote Launch Vehicle (RLV) Hangar (LOC 15) and Towway area.

Fire Station #2 was constructed in 2008 and has been active since. As of 2019, the building housed fire station personnel and equipment, including aqueous film-forming foam (AFFF). AFFF was reportedly discharged into the stormwater pond west of Fire Station #2 during annual equipment testing.

STP #17 was built around 1975 and demolished around 1998. STP #17 consisted of a small package treatment plant and percolation pond used for effluent disposal.

The SLF Runway consists of a 15,000-foot-long concrete runway. The runway was built in 1975 and serves as the primary end-of-mission landing site for the space shuttle orbiter. It is a fully functional airport. Potential uses of AFFF along the SLF Runway may have occurred during fire response efforts. On February 6, 2020, a spill of 5 to 8

gallons of AFFF was reported on the SLF apron area tarmac during a fire training exercise. The spill was reportedly rinsed off the tarmac with water and impacted two areas southeast and northwest of the tarmac.

The RLV Hangar-Flight Vehicle Facility was built in 2000 and is a 52,000 square foot (ft^2) active facility that currently houses Starfighters, Inc. aircraft. Anecdotal information was obtained that indicated a foam suppression system inside the hangar discharged; however, information obtained from the Landing Aids Control Building Confirmatory Sampling Report indicated that the fire suppression system at the RLV Hangar is water-based.

Groundwater and surface water sampling during the Center-wide PFAS investigation indicated widespread PFAS impacts to groundwater and surface water at SWMU 114 with the greatest concentrations detected behind Fire Station #2.

2022 Investigation Objectives

Investigation objectives were modified as PFAS screening levels evolved. The initial objectives of the 2022 investigation were to delineate perfluorooctanoic acid (PFOA) and perfluorooctane sulfonic acid (PFOS) laterally and vertically to the State of Florida provisional groundwater cleanup level (pGCTL) (70 ng/L separately or combined) and to develop a general understanding of the surface water and groundwater interactions at this area of KSC. The objective of the groundwater investigation was changed to delineating PFAS compounds in groundwater to the Surface Water Screening Level (SWSL) of 10 ng/L for PFOS. When EPA released Regional Screening Levels (RSLs) in May 2022, the objective of the groundwater investigation was changed again to delineating to the RSLs of 4 ng/L for PFOS; 6 ng/L for PFOA, perfluorononanoic acid (PFNA), and hexafluoropropylene oxide dimer acid (HFPF-DA, trade name GenX); 40 ng/L for perfluorohexanesulfonic acid (PFHxS); and 600 ng/L for perfluorobutanesulfonic acid (PFBS).

2022 Site Assessment Activities

The 2022 Site Assessment Activities included: advancing 2 lithologic borings to a depth of 60 feet using a rotosonic drill rig; collecting 114 DPT groundwater samples from 27 locations at screen centerpoint

depths of 5', 15', 25', and 35', with 45' samples also collected at 6 locations; collecting 15 surface water samples from 15 locations using a dipper sampler; collecting 4 concrete samples and 1 asphalt sample from known release locations with a hammer and chisel (0 to 2 inches); installing 18 shallow water table monitoring wells and 19 intermediate wells screened 25'-35' using a direct push technology (DPT) drill rig; installing 10 staff gauges; and collecting 1 round of water level measurements.

Twenty-five equipment and field blanks were collected. All results were below detection limits. Thirteen field duplicate samples were collected. Two analytes exceeded the relative percent difference (RPD) goal of 30% in the one duplicate synthetic precipitation leaching procedure (SPLP) concrete sample. All analytes met the RPD goal in all of the groundwater and surface water duplicate samples.

Lithologic Borings

Two lithologic borings were advanced to a depth of 60 feet using a rotosonic drill rig. The space between boring locations is 3,300 feet. The lithology of the two borings was highly variable. In general sand and shell was observed from land surface to a depth of 43 to 48 feet. The sand and shell layers were underlain by silt, shell and/or clay to a depth of 60 feet. The silt, shell and/or clay layer may serve as a retarding unit. Soil samples were not collected for laboratory analysis since the borings were placed in locations where deep PFAS impacts were not expected.

Monitoring Well and Staff Gauge Installations

Eighteen shallow monitoring wells (screened to intersect the water table) and 19 intermediate monitoring wells (screened 25'-35') were installed using a DPT drill rig. Ten staff gauges were installed in canals and ponds across the site. Water level measurements were made on August 3, 2022. Groundwater flow is similar between the shallow and intermediate depths. In general, groundwater flows from the northern corner of the site radially towards the west, southwest, south, and southeast. A groundwater divide appears to be present in the central portion of the towway.

Concrete and Asphalt Sampling

Four concrete samples and 1 asphalt sample were collected. PFOS concentrations in SPLP samples exceeded 4 ng/L in all of the samples. A PFOS concentration of 5,340 ng/L was detected in asphalt sample S114-AS0005.

NASA noted this is the only asphalt sample collected on center to date.

DPT Groundwater Sampling

Including center-wide PFAS investigation samples, 124 DPT groundwater samples were collected. Forty-nine exceeded the RSL for PFOS, 38 exceeded the RSL for PFHxS, 26 exceeded the RSL for PFOA and 1 exceeded the RSL for PFNA. The estimated areal extent of groundwater with PFAS concentrations above the RSLs is 704 acres. The estimated areal extent of groundwater with PFAS concentrations 1000 times the RSLs is 11 acres.

It is assumed the groundwater plume extends to Banana Creek to the east and south. To the north the plume remains undelineated. To the west it is generally delineated except for southwest and northwest areas. Vertical delineation still needed at 22 of 63 DPT sample locations. Vertical delineation is needed below 35 feet at 7 locations and below 45 feet at 15 locations. No samples have been collected below 45 feet.

Space Florida sampled their effluent as dewatering to the north of the apron area progressed (referencing slide 25). PFOS was not detected until last week or two of the effort. Effluent was discharged to the east along Astronaut Road, which will be kept in mind in future sampling efforts DPTs along Astronaut Road predate the discharge so there is a baseline. Will have to investigate south of the new road, which is parallel to and east of the SLF runway. The effluent discharge area didn't have connectivity to the SLF ditches NASA and HGL took an action to make a figure to show where all the effluent sample locations are **(2210-A11).**

Surface Water Sampling

Seventeen surface water samples were collected. Sixteen exceeded the FDEP SWSL for PFOS. Nearly all sampled surface water bodies have

exceeded the SWSL (10 ng/L) for PFOS, including at points that connect to Banana Creek.

Summary

In summary, multiple PFAS groundwater plumes have been identified at SWMU 114. As-yet unidentified source areas may exist. In general, groundwater flows from the northern corner of the site radially towards the west, southwest, south, and southeast. The PFAS groundwater plume is assumed to extend to Banana Creek to the south and east. The plume remains undefined to the north and west. The plume has not been delineated vertically and extends to a depth of at least 45 feet. A silt, shell and/or clay layer is present from a depth of 43 to 48 feet to at least 60 feet. This layer may serve as a retarding unit.

Nearly all sampled surface water bodies exceeded the SWSL for PFOS and concentrations exceed the SWSL at points that connect to Banana Creek. The highest surface water PFOS concentrations were detected in the pond behind Fire Station #2. There may be tidal influence on surface water.

All concrete and asphalt SPLP samples exceeded the PFOS RSL.

There are currently large distances between some sampling points. With more data, we will get a better resolution of groundwater and surface water interaction.

2023 Investigation Focus

The 2023 SLF PFAS investigation will include the Morpheus Test Site on the North End of the SLF and the Former SLF Rescue Building Site located on Sharkey Road in the midfield area, combining the entire SLF Area into a single study area. The primarily focus of the 2023 investigation will be on groundwater/surface water interactions. 2023 activities will include soil sampling, DPT groundwater sampling, monitoring well installation and sampling, staff gauge installations and surface water sampling. Water level measurements and staff gauge readings will be made, and surface water and groundwater samples will be collected from select locations on a quarterly basis.

FDEP agrees with the focus on the 2023 focus on hydraulics. NASA observed that there are now quite a few wells in the area and are starting to see the groundwater flow patterns.

2210-M12 Alex Murphy/Tetra Tech

SWMU 067 POL and SWMU #088 SW3 ADP

Objective:
Present site history, sampling results, and present path forward for Team consensus for chlorinated volatile organic compounds (CVOCs) at the Paint and Oil Locker (POL) SWMU #067 and Storage Warehouse #3 (SW3) SWMU #088. There is active treatment via air sparging in the POL Southern Treatment Area. The northern portion of POL and all of SW3 are in long-term monitoring (LTM).

Discussion:

FDEP had some initial questions regarding surface water bodies in the general area. There is a canal at the southern end of the POL southern treatment area sparge wells and below the southern edge of the SW3 low concentration plume. Is discharge to surface water a concern? Tetra Tech noted that sampling has been conducted across the canal in the past with clean results on the other side to confirm there is no migration. Further, the air sparge wells serve as a sparge barrier in front of the canal to for the POL plume. Tetra Tech formerly collected surface water samples at two locations in the canal with no detections. NOTE: Following the meeting, surface water results for the southern ditch (POL-SW0001 and POL-SW0002) were reviewed. There were no detections of VOCs in the 2017 semi-annual sampling events, after which surface water sampling was suspended. Prior to 2017, vinyl chloride was detected periodically above its surface water cleanup target level (2.4 ug/L).

The canal is part of the permitted stormwater management system for much of the Industrial Area.

FDEP pointed out that it looks like the POL low concentration plume (LCP) intersects a surface water body north of the canal. NASA

2022 Investigation Activities

- Advanced 2 lithologic borings to a depth of 60 feet using a rotosonic drill rig.
- Collected 114 DPT groundwater samples from 27 locations. Samples collected at 5’, 15’, 25’, 35’, 45’ (6 locations).
- Collected 15 surface water samples from 15 locations using a dipper sampler.
- Collected 4 concrete samples and 1 asphalt sample from known release locations. Samples collected with hammer and chisel (0 to 2 inches).
- Installed 18 shallow water table monitoring wells and 19 intermediate wells screened 25’-35’ using a DPT drill rig.
- Installed 10 staff gauges.
- Collected 1 round of water level measurements on August 3, 2022.

2022 Investigation QC Samples

- 25 equipment and field blanks were collected. All results were below detection limits.

Groundwater Plume Delineation Status

- The estimated areal extent of groundwater with PFAS concentrations above the RSLs is 704 acres.
- The estimated areal extent of groundwater with PFAS concentrations 1000 times the RSLs is 11 acres.

Lateral Delineation:

- South and East – Assume plume extends to Banana Creek.
- North – Remains undelineated. Additional SWMUs located to north.
- West – Generally delineated except for southwest and northwest areas.

Vertical Delineation:

- Vertical delineation still needed at 22 of 63 DPT sample locations.
  - Need vertical delineation below 35 feet at 7 locations.
  - Need vertical delineation below 45 feet at 15 locations.
  - No samples collected below 45 feet.

Surface Water PFAS Ratios

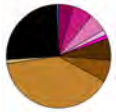
PFAS signatures are different in the areas

immediately around Fire Station #2

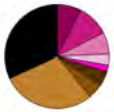
and Towway

when compared to locations

north of the SLF tarmac



and along the runway



Surface water signatures tend to resemble clusters identified by AECOM, 2021 for legacy AFFF and modern AFFF. Locations with higher PFHxS than PFOS are similar to those for modern AFFF and locations with higher PFOS than PFHxS are similar to those for legacy AFFF.

Delineation of Surface Water Impacts Status

- Nearly all sampled surface water bodies have exceeded the SW SL (10 ng/L) for PFOS.
- PFAS concentrations exceed the SW SL at points that connect to Banana Creek.

Summary

Groundwater:

- Multiple PFAS groundwater plumes have been identified at SWMU 114. Other potential source areas may exist.
- In general, groundwater flows from the northern corner of the site radially towards the west, southwest, south and southeast.
- The PFAS groundwater plume is assumed to extend to Banana Creek to the south and east. The plume remains undefined to the north and west. The plume has not been delineated vertically and extends to a depth of at least 45 feet. A silt, shell and/or clay layer is present from a depth of 43 to 48 feet to at least 60 feet. This layer may serve as a retarding unit.

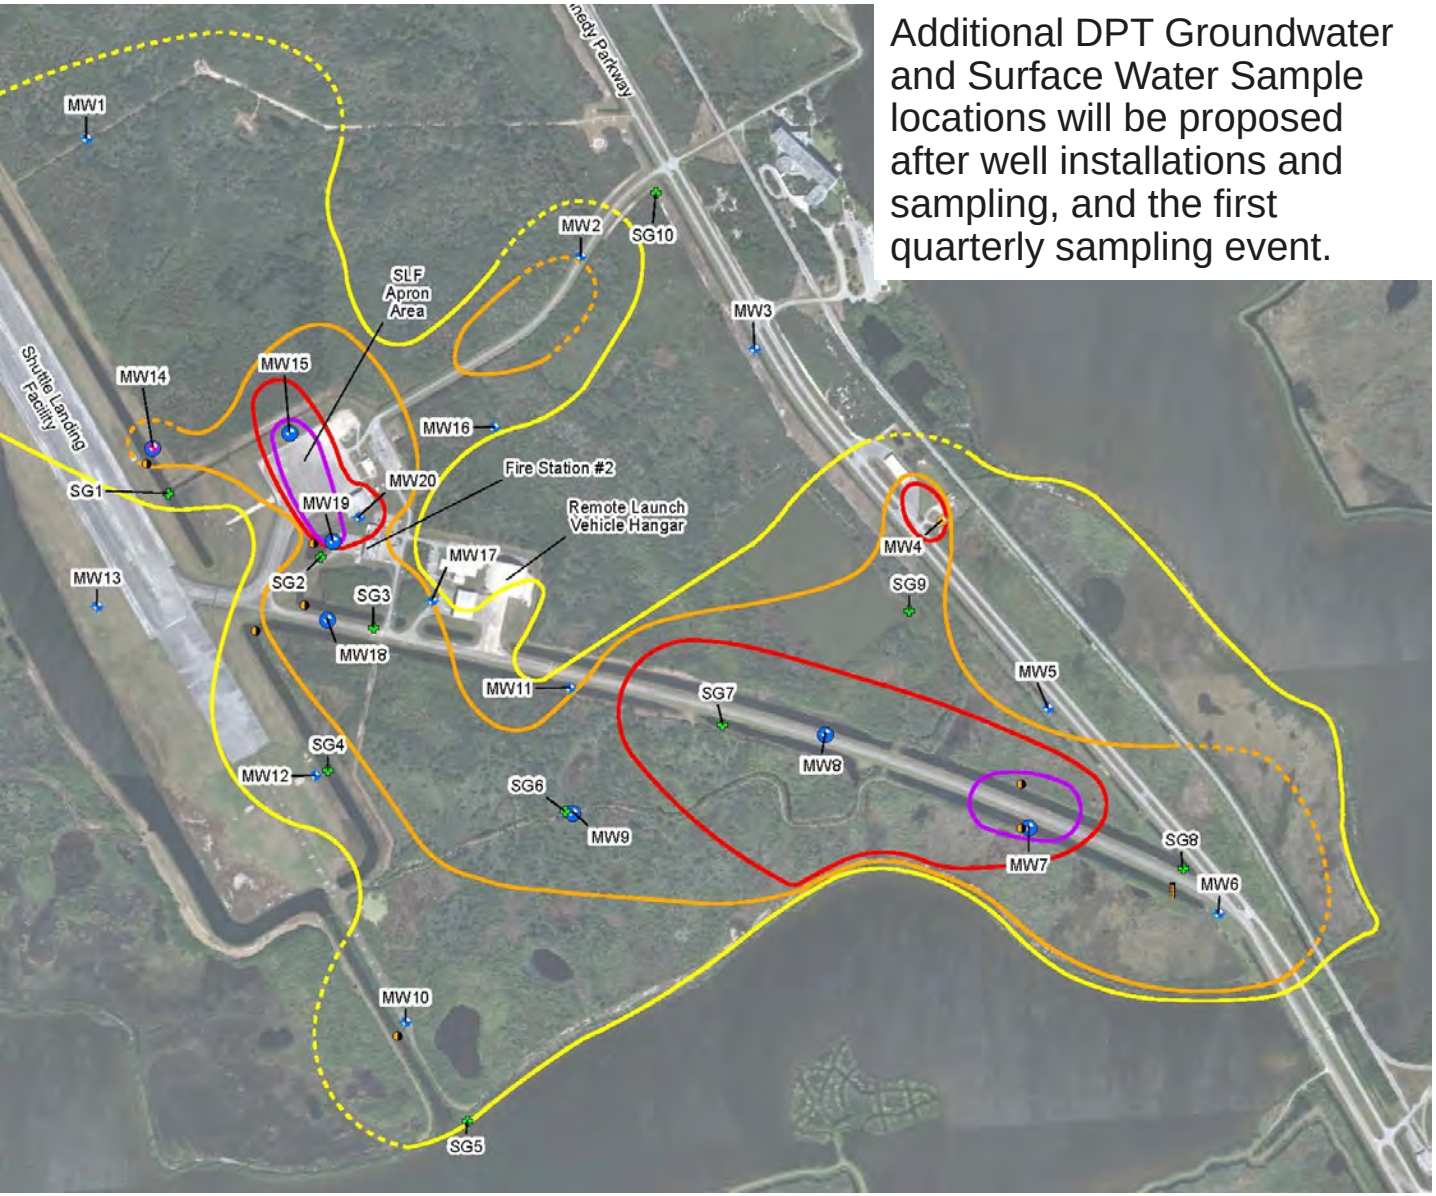
Surface Water:

- Nearly all sampled surface water bodies exceeded the SW SL for PFOS and concentrations exceed the SW SL at points that connect to Banana Creek.
- The highest surface water PFOS concentrations were detected in the pond behind Fire Station #2.

All concrete and asphalt SPLP samples exceeded the PFOS RSL.

2023 Investigation Focus

- The 2023 SLF PFAS investigation will include the Morpheus Test Site on the North End of the SLF and the Former SLF Rescue Building Site located in the midfield area, combining the entire SLF Area into a single study area.
- The primarily focus on the 2023 investigation will be on groundwater/surface water interactions.
- 2023 activities will include soil sampling, DPT groundwater sampling, monitoring well installation and sampling, staff gauge installations and surface water sampling.
- On a quarterly basis; water level measurements, staff gauge readings, surface water and groundwater samples will be collected from select locations



Additional DPT Groundwater and Surface Water Sample locations will be proposed after well installations and sampling, and the first quarterly sampling event.

2023 Sample Locations

Legend

- Existing Monitoring Well
- Staff Gauge Location
- Proposed Shallow (WT-1' + 10') and Intermediate Well (30'-35') Locations

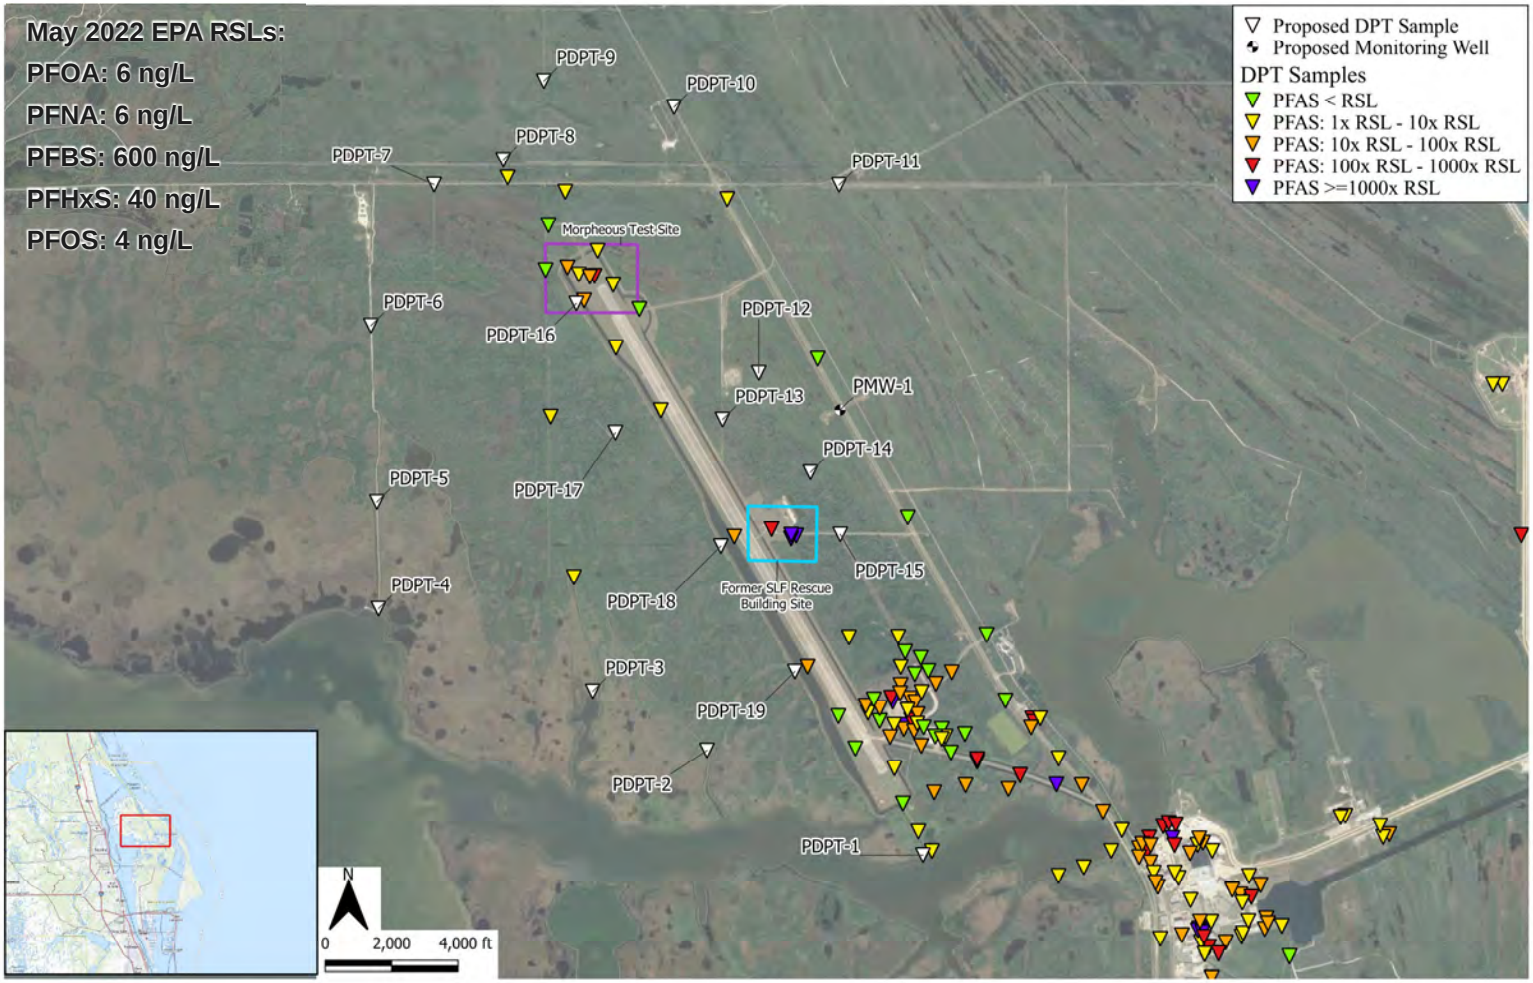
- Extent of Groundwater Above 10 x SLs (dashed where inferred)
- Extent of Groundwater Above 100 x SLs
- Extent of Groundwater Above 1000 x SLs



2023 Sample Locations

Groundwater samples will be collected from 19 DPT sample locations to delineate PFAS compounds to the RSL at the SLF.

Work Plans for the Morpheus Test Site and Former SLF Rescue Building Site will be prepared.

Attachment A. Daily PFAS Sampling Checklist

Date: 11-15-2021

Site Name: SLF PFAS

Weather (*temperature/precipitation*): _____

Please check all boxes that apply and describe any exceptions in the notes section below along with QA/QC methods used to assess potential sample cross-contamination as a result.

Field Clothing and PPE:

- ☑ No water- or stain-resistant clothing (e.g., GORE-TEX®)
- ☑ During collection of water and sediment samples, no water- or stain-resistant boots OR water- or stain-resistant boots covered by PFAS-free over-boots
- ☑ Field boots (or over-boots) are made of polyurethane, PVC, rubber, or untreated leather
- ☑ Waders or rain gear are made of polyurethane, PVC, vinyl, wax-coated or rubber
- ☑ Clothing has not been recently laundered with a fabric softener
- ☑ No coated HDPE suits (e.g., coated Tyvek® suits)
- ☑ Field crew has not used cosmetics, moisturizers, or other related products today
- ☑ Field crew has not used sunscreen or insect repellants today, other than products approved as PFAS-free

Field Equipment:

- ☑ Sample containers and equipment in direct contact with the sample are made of HDPE, polypropylene, silicone, acetate or stainless steel, not LDPE or glass
- ☑ Sample caps are made of HDPE or polypropylene and are not lined with Teflon™
- ☑ No materials containing Teflon™, Viton™, or fluoropolymers
- ☑ No materials containing LDPE in direct contact with the sample (e.g., LDPE tubing, Ziploc® bags)
- ☑ No plastic clipboards, binders, or spiral hard cover notebooks
- ☑ No waterproof field books
- ☑ No waterproof or felt pens or markers (e.g., certain Sharpie® products)
- ☑ No chemical (blue) ice, unless it is contained in a sealed bag
- ☑ No aluminum foil
- ☑ No sticky notes (e.g., certain Post-It® products)

Decontamination:

- ☑ Reusable field equipment (e.g., inner drill rods, samplers) decontaminated prior to reuse
- ☑ "PFAS-free" water is on-site for decontamination of field equipment – PFAS free water from tested source
- ☑ Alconox® or Liquinox® used as decontamination detergent

Purpose - PFAS DPT Sampling/GW Sampling

Personnel - Jason B. (HGL), Howard F. (HGL), Dustin L. (HGL), Angel A. (Eartech), Aram G. (NASA), Ryan O. (NASA), Geoff C.

Equipment - GeoProbe, work trucks, sampling gear, Pecon equipment.

Weather - Hi - 72° Lo - 60° Sunny wind - 11 mph S precipitation - 0%

0930 - Jason B. & Howard F on site to meet with locators.

1100 - Ryan O., Geoff Card (NASA safety) on-site.

1115 - Drillers & Dustin L. on-site. Conduct Nuts & bolts meeting with all personnel.

1130 Ryan O. & Geoff Card off-site. Conduct TGSM and campfire inspection.

1200 - Begin hand clearing S114-DPT1000-007.0-20211105 (location # 16 on figure 2A).

1230 - Rod and screen installed from 3-7 ft bgs and insert HDPE tubing.

1235 - Begin purge S114-DPT1000-007.0-20211105

1255 - Collect sample S114-DPT1000-007.0-20211115 for PFAS

~~1310 - Began purge at S114-DPT1000-011.0-20211115 (R)~~

5. Job Safety: (TGSM Topics, Report violations, instructions given, corrective action taken)

Biologicals, Pinch Points, Chemical Exposure, COVID-19, Traversing to Wells, Slips, Trips and Falls.

6. Description of Work Completed

0645 - All personnel on-site. Conduct TGSM and rig inspection.

0700 - Mob to DPT1009 (location #12 on Figure 2A)

0716 - Hand auger to 5' bgs at DPT1009.

0720 - Push screen to 3'-7' and no groundwater encountered. Remove screen, decontaminated and push screen to 5'-9' bgs.

0742-0855 - Collect S114-DPT1009-007.0-20211118, S114-DPT1009-015.0-20211118, S114-DPT1009-025.0-20211118, S114-DPT1009-035.0-20211118 and FD-01.

0900 - Pressure grout DPT1009 boring location and mob drill rig to DPT1010 (location #9 on Figure 2A).

0938 - Arrive at DPT1010 location and hand auger to 5' bgs.

0956-1104 - Collect S114-DPT1010-005.0-20211118, S114-DPT1010-015.0-20211118, S114-DPT1010-025.0-20211118, and S114-DPT1010-035.0-20211118.

1110 - Pressure grout DPT1010 boring location and mob to DPT1011 (location #10 on Figure 2A).

1130-1200 - Drillers break for lunch.

1140 - Hand auger to 5' bgs at DPT1011.

1230-1333 - Collect S114-DPT1011-005.0-20211118, S114-DPT1011-015.0-20211118, S114-DPT1011-025.0-20211118, and S114-DPT1011-035.0-20211118.

1335-1430 - Phase II lightening warning in effect.

1440 - Heavy rain continues and all roads/trails become flooded and muddy. Due to site conditions mob vehicles and drill rig to trailer staging area.

1530 - Attempt to access location #11 on Figure 2A but due to standing water and thick mud the drill rig was unable to access the area.

1540-1545 - Collect S114-FB-20211118-01 and S114-EB-20211118-01.

1600 - Secure drill rig and all personnel depart site for the day.

Direct-Push Rig Inspection Checklist

Project Name/Number: SWMU 114/118

Make/Model Number: Geoprobe 8140LS

Equipment Number: 1850

Hours/Mileage:

Rig clean and free of soils, oils, and other debris.	✓	Tracks in good condition.	✓
All hydraulic fittings and hoses free of damage, tightened, and not leaking.	✓	Tires fully inflated and in good condition.	NA
Rig controls clearly labeled and in working condition.	✓	Back-up alarm working.	NA
Rig Kill Switch in working order.	✓	First Aid Kit accessible and stocked.	✓
All of the Rig's connections tightened and leak-free.	✓	Fire Extinguisher accessible and fully charged.	✓
Parking brake functions properly.		Eye Wash full and accessible.	✓
Steering controls in working order and clear of obstacles.	✓	Hearing protection available and is being used during hammering.	✓
Copy of the manual for all drilling equipment available.	✓	All overhead and underground hazards identified.	✓

√ = OK
N/A = Not Applicable
X = Defective

These items are to be checked each shift before operating this piece of equipment.
Report all items requiring repair to supervisor.

KSC/NASA SWMU 114

2-18-22

7:50 Howard Fowler and Drill Pro (Dave Lassing, Jeff Zeigler, Colten Hurst) on site to advance S114-LB02 to 60'.
70°, overcast, North wind

8:00 Conduct TSM. Discussed Drilling Safety

8:05 Begin hand clearing S114-LB02

8:15 Begin using Sonic rig to advance boring

8:55 Reach 30' depth

9:35 Reach 60' depth. Drillers begin grouting borehole. Lithology entered onto soil boring log.

10:00 Grouting complete. Drillers begin cleaning up site
½ drum of soil IDW generated

10:35 Place IDW drums on spill pallet in hangar Area behind Fire Station #2

10:50 off site

KSC/NASA SWMU 114 2-16-22

8:30 Howard Fowler At badging office to meet Drill Pro Drilling Crew (Dave Lansing, Cotten Hurst & Jeff Zeigler.

9:30 Leave badging office. Go to CCI to fill water tank.

10:00 At SWMU-LB01 to advance soil boring to 60' for Holocene description. 72°, partly cloudy west wind.

10:20 Conduct TSM. Discuss drill rig safety.

10:25 Begin hand clearing to 5'.

10:50 Begin advancing boring with sonic rig. Holocene data entered on soil boring log.

11:25 Reach 30' depth.

12:00 Reach 60' depth. Drillers take lunch.

12:50 Drillers return from lunch. Begin grouting borehole.

13:10 Grouting complete. Drillers begin cleaning up site.
½ drum of soil IDW generated.

13:35 off site.

Biologicals, Pinch Points, Chemical Exposure, COVID-19, Traversing to Wells, Slips, Trips and Falls.

6. Description of Work Completed

0830 - All personnel arrives at KSC badging station. Drillers wait in line to be badged. Wait time longer than normal at 1-1.5 hrs.

1000 - Drillers receive badges and mob to CCF to fill water tank with water from PFAS tested hydrant.

1025 - Water tank filled and all personnel mobs to tow away area.

1035 - Conduct TGSM and rig inspection. Mob to S114-DPT1014 (**S114-DPT-9 on field figure**).

1055 - Arrive at boring location and hand auger to 5' bgs.

1128-1224 - Collect S114-DPT1014-005.0-20220221, S114-DPT1014-015.0-20220221, S114-DPT1014-025.0-20220221, and S114-DPT1014-035.0-20220221.

1230 - Pressure grout DPT1014 boring location and mob to DPT1015 (**PFAS-DPT-17 on field figure**).

1228 - Arrive at DPT1015 boring location and hand auger to 5' bgs.

1305-1401 - Collect S114-DPT1015-005.0-20220221, S115-DPT1014-015.0-20220221, S114-DPT1015-025.0-20220221, and S114-DPT1015-035.0-20220221 and FD.

1415-1445 - All personnel breaks for lunch.

1450 - Load drill rig on trailer and mob to DPT1016 (**S114-DPT-08 on field figure**).

1505 - Arrive at DPT1016 location and hand auger to 5' bgs.

1520-1656 - Collect S114-DPT1016-007.0-20220221, S114-DPT1016-015.0-20220221, S114-DPT1016-025.0-20220221, and S114-DPT1016-035.0-20220221.

1700 - Pressure grout DPT1016 boring location.

1710-1714 - Collect S114-FB-20220221-01 and S114-EB-20220221-01.

1730 - Drill rig and trailer secure. All personnel off-site for the day.

Attachment A. Daily PFAS Sampling Checklist

Date: 2/21/22

Site Name: KSC PFAS Assessment

Weather (*temperature/precipitation*): 70° clear

Please check all boxes that apply and describe any exceptions in the notes section below along with QA/QC methods used to assess potential sample cross-contamination as a result.

Field Clothing and PPE:

- ☑ No water- or stain-resistant clothing (e.g., GORE-TEX®)
- ☑ During collection of water and sediment samples, no water- or stain-resistant boots OR water- or stain-resistant boots covered by PFAS-free over-boots
- ☑ Field boots (or over-boots) are made of polyurethane, PVC, rubber, or untreated leather
- ☑ Waders or rain gear are made of polyurethane, PVC, vinyl, wax-coated or rubber
- ☑ Clothing has not been recently laundered with a fabric softener
- ☑ No coated HDPE suits (e.g., coated Tyvek® suits)
- ☑ Field crew has not used cosmetics, moisturizers, or other related products today
- ☑ Field crew has not used sunscreen or insect repellants today, other than products approved as PFAS-free

Field Equipment:

- ☑ Sample containers and equipment in direct contact with the sample are made of HDPE, polypropylene, silicone, acetate or stainless steel, not LDPE or glass
- ☑ Sample caps are made of HDPE or polypropylene and are not lined with Teflon™
- ☑ No materials containing Teflon™, Viton™, or fluoropolymers
- ☑ No materials containing LDPE in direct contact with the sample (e.g., LDPE tubing, Ziploc® bags)
- ☑ No plastic clipboards, binders, or spiral hard cover notebooks
- ☑ No waterproof field books
- ☑ No waterproof or felt pens or markers (e.g., certain Sharpie® products)
- ☑ No chemical (blue) ice, unless it is contained in a sealed bag
- ☑ No aluminum foil
- ☑ No sticky notes (e.g., certain Post-It® products)

Decontamination:

- ☑ Reusable field equipment (e.g., inner drill rods, samplers) decontaminated prior to reuse
- ☑ "PFAS-free" water is on-site for decontamination of field equipment
- ☑ Alconox® or Liquinox® used as decontamination detergent

6. Description of Work Completed

0730 - Arrive on site at SLF. Conducted TGSM. Gathered sampling gear from Jason B. Mob to SLF Apron Facility and retrieve radio before entering the landing strip.

0835 - Collected sample S114-SW0001-000.0-20220222 (Former SW-1). No water flow observed. Water is 2-3' deep upon collection (could not tell due to brackish water).

0900 - Collected sample S114-SW0002-000.0-20220222 (SW-7). Water flowing north. 3'+ deep upon collection (brackish water).

0930 - Collected sample S114-SW0003-000.0-20220222 (PFAS-SW0011). No water flow observed. 1-2' deep upon collection (brackish water).

0940 - Collected sample S114-SW0004-000.0-20220222 (PFAS-SW0012). Water flowing southwest. 3' deep upon collection (brackish water).

1000 - Collected sample S114-SW0005-000.0-20220222 (PFAS-SW0035). Water flowing to the north. 3' deep upon collection (brackish water). Contacted SLF tower for access to landing strip.

1020 - Collected sample S114-SW0006-000.0-20220222 (PFAS-SW0034). Water flowing to the north. 2' deep upon collection (brackish water).

1040 - Collected sample S114-SW0007-000.0-20220222 (SW-6). Water flowing to the north. 2' deep upon collection (brackish water). Noted: heavy vegetation near sample location.

1050 - Collected sample S114-SW0008-000.0-20220222 (SW-5). Water flowing to the northwest. 1-2' deep upon collection (brackish water). Noted: heavy vegetation near sample location.

1115 - Collected sample S114-SW0009-000.0-20220222 (PFAS-SW0062). No water flow observed. 1-2' deep upon collection (brackish water). Noted: vegetation near sample location.

1140 - Collected sample S114-SW0010-000.0-20220222 and FD-02 (PFAS-SW0013). Water flowing to the west. 1-2' deep upon collection (brackish water).

1155 - Collected sample S114-SW0011-000.0-20220222 (PFAS-SW0014). Water flowing to the west. 1-2' deep upon collection (brackish water).

1205 - Collected sample S114-SW0012-000.0-20220222 (PFAS-SW0016). Water flowing to the west. 1-2' deep upon collection (brackish water).

1220 - Collected sample S114-SW0013-000.0-20220222 (PFAS-SW0017). Water flowing to the west. 1-2' deep upon collection (brackish water).

1255 - Collected sample S114-SW0014-000.0-20220222 (SW-2). No water flow observed. 1' deep upon collection. Noted: could not access proposed sample location due to heavy vegetation overgrowth. Collected sample approximately 200' north of proposed location. Collected GPS location 30' north of sample location on pathway.

1300 - Collected sample S114-EB-20220222-01. Mob to KARS Park II (SWMU S118).

1345 - Collected sample S118-SW0001-000.0-20220222 (PFAS-SW0025). Water flowing to north. 4-5' deep upon collection (clear water).

1435 - Collected sample S118-SW0002-000.0-20220222 and FD-01 (SW-4). No water flow observed. 1' deep upon collection (brackish water).

1450 - Collected sample S118-SW0003-000.0-20220222 (PFAS-SW0059). Noted: no water flow and there was vegetation around the sample location.

1500 - Collected sample S118-SW0004-000.0-20220222 (SW-3). Noted: no water flow and there was vegetation around the sample location.

1505 - Collected sample S118-FB-20220222-01.

1510 - Collected sample S118-EB-20220222-01. Mob to SWMU 014.

1530 - Collected sample S014-SW0001-000.0-20220222 (SW-10). No water flow observed. 1' deep upon collection (brackish water).

1535 - Collected sample S014-SW0002-000.0-20220222 (SW-9). No water flow observed. 0.5' deep upon collection. Noted: vegetation and brackish water at sample location.

1550 - Collected sample S014-SW0003-000.0-20220222 and FD-01 (SW-8). No water flow observed. 0.5' deep upon collection. Noted: vegetation and brackish at sample location.

1600 - Collected sample S014-SW0004-000.0-20220222 (PFAS-SW0049). 0.5' deep upon collection. No water flow observed. Noted: heavy vegetation and brackish water at sample location.

1615 - Collected sample S014-SW0005-000.0-20220222 (PFAS-SW0048). No water flow observed. 0.5' deep upon collection. Noted: heavy vegetation and brackish water at sample location.

5. Job Safety: (TGSM Topics, Report violations, instructions given, corrective action taken)

Biologicals, Pinch Points, Chemical Exposure, COVID-19, Traversing to Wells, Slips, Trips and Falls

6. Description of Work Completed

0700 - All personnel on-site. Conduct TGSM and rig inspection.

0710 - Mob trucks and drill rig to DPT1017 (**S114-DPT-7 on field figure**).

0718 - Hand auger to 5' bgs at DPT1017.

0753-0855 - Collect S114-DPT1017-007.0-20220222, S114-DPT1017-015.0-20220222, S114-DPT1017-025.0-20220222, and S114-DPT1017-035.0-20220222.

0900 - Remove DPT rods, pressure grout boring and load drill rig on trailer to mob to next location.

0930 - Check-in with NASA flightline office and get radio to access DPT1018 (**S114-DPT-10 on field figure**) off of flightline.

0945 - Arrive at DPT1018, unload drill rig and hand auger to 5' bgs.

1013-1103 - Collect S114-DPT1018-005.0-20220222, S114-DPT1018-015.0-20220222, S114-DPT1018-025.0-20220222, S114-DPT1018-035.0-20220222 and FD.

1110 - Pressure grout boring and load drill rig on trailer to depart flightline.

1130 - Check-out with NASA tower and return radio to office.

1135 - Arrive at cleared entrance to DPT1019 (**S114-DPT-35 on field figure**). All personnel breaks for lunch.

1200 - Begin navigating down cleared trail to DPT1019 location.

1231-1328 - Collect S114-DPT1019-005.0-20220222, S114-DPT1019-015.0-20220222, S114-DPT1019-025.0-20220222, and S114-DPT1019-035.0-20220222.

1330 - Pressure grout DPT1019 boring and mob drill rig out of area to be loaded on trailer.

1350 - Jason B. stages drum #221931 on pallet #221932 and adds ~10 gallons of IDW purge water to drum.

1420 - Arrive at DPT1020 (**S114-DPT-36 on field figure**). Unload drill rig and hand auger to 5' bgs.

1450-1541 - Collect S114-DPT1020-005.0-20220222, S114-DPT1020-015.0-20220222, S114-DPT1020-025.0-20220222, and S114-DPT1020-035.0-20220222.

1545 - Pressure grout DPT1020 boring location and load drill rig on trailer.

1605-1615 - Collect S114-FB-20220222-01 and S114-EB-20220222-02.

1630 - Mob trucks, drill rig and trailer to S118-DPT-13 location on field figure.

1700 - Stage trailer, drill rig and trailer secure. All personnel off-site for the day.

6. Description of Work Completed

0700- All personnel on-site. Conduct TGSM and rig inspection.

0705 - Mob to tow away to access trail where S114-DPT1014 is located.

0800 - Arrive at S114-DPT1014 location and hand auger to 5' bgs.

0820 - Collect S114-DPT1014-045.0-20220616.

0830 - Pressure grout S114-DPT1014 boring and mob rig back to tow away and load drill rig on trailer.

0900 - Check in with KSC flight line office and confirm access to S114-DPTK and check out radio.

0920 - Arrive at S114-DPT1023 (S114-DPTK) and unload drill rig.

0930 - Hand auger to 5' bgs.

0949-1028 - Collect S114-DPT1023-005.0-20220616 through S114-DPT1023-035.0-20220616.

1055-1100 - Collect S114-EB-20220616-01 and S114-FB-20220616-01.

1115 -Demob from flight line and return radio to office.

1130-1200 - All personnel breaks for lunch.

1210 - Unload drill rig and mob to S118-DPT1007 (S118-DPTF).

1225 - Hand auger to 5' bgs at S118-DPT1007.

1239-1343 - Collect S118-DPT1007-005.0-20220616 through S118-DPT1007-045.0-20220616.

1350 - Pressure grout boring and mob rig back to trailer to load.

1410 - Mob to KSC badging office and stage truck/trailer. Mob drill rig to S118-DPT1008 (S118-DPTG).

1459-1601 - Collect S118-DPT1008-005.0-20220616 through S118-DPT1008-045.0-20220616.

1610 - Pressure grout S118-DPT1008 boring.

1620-1625 - Collect S118-EB-20220616-01 and S118-FB-20220616-01.

1630 - Mob drill rig back to box truck and load rig on trailer.

1645 - Mob trucks and equipment to industrial area to stage trailer for the night.

1700 - Stage trailer in industrial area. Jason B. mobs to CCF IDW to unload contained purge water.

1730 - Add ~12 gallons of IDW to drum #226060 on pallet #216883. Drum is ~40% filled.

0700: All personnel on-site. Conduct TGSM & rig inspection.
0705: Mob to tow away to access S114-DPT1014 (down trail)
0800: Arrive at S114-DPT1014 location and hand clear to 5' bgs.
0817: Begin purge at S114-DPT1014-045.0
0820: Collect S114-DPT1014-045.0-20220616.
0830: Pressure grout S114-DPT1014 boring and mob back to tow away to load rig.
0900: Check in with KSC flight line office and confirm access to S114-DPTK and check out radio
0920: Arrive at S114-DPT1023 (DPTK) and unload drill rig.
0930: Hand auger to 5' bgs at DPT1023.
0946: Begin purge at S114-DPT1023-005.0-20220616.
0949: Collect S114-DPT1023-005.0-20220616
0958: Begin purge at S114-DPT1023-015.0-20220616
1001: Collect S114-DPT1023-015.0-20220616
1013: Begin purge at S114-DPT1023-025.0
1016: Collect S114-DPT1023-025.0-20220616
1025: Begin purge at S114-DPT1023-035.0
1028: Collect S114-DPT1023-035.0-20220616 & S114-FD-20220616-01 (field duplicate).
1035: Pressure grout S114-DPT1023 boring
1055: Collect S114-EB-20220616-01 (equipment blank)
1100: Collect S114-FB-20220616-01 (field blank)
1115: Demob from flight line and return radio.
1130-1200: Lunch break.
1200: Arrive at SWMU 114.

NASA / KSC - SWMU 118 6/16/22

NS1010.01.03

Purpose: Collect PFAS delineation samples from SWMU 118
Personnel: Jasan B. (HGL) Mikey R & Sam J. (GWP)
Equipment: Geoprobe, outer/inner rods, temporary screen (SS), HDPE, master flex, bottleware, purflow cement, work trucks
Weather: Hi - 90 Lo - 75 sunny / humid.

1210: Unload drill rig and mob to SI18 - DPT1007 (DPTF)
1225: Load auger to 5' bgs at SI18 - DPT1007.
1236 Begin purge at SI18 - DPT1007 - 005.0
1239 Collect SI18 - DPT1007 - 005.0 - 20220616.

6. Description of Work Completed

-DrillPro traveled to site from Orlando.

-Due to personnel change, new drillcrew member badges in.

-Drums were staged at the CCF IDW yard.

-(4) wells were drilled and installed to grout. Wells: SWMU114-MW0005S, SWMU114-MW0005I, SWMU114-MW0017S and SWMU114-MW0017I. See construction logs and field notes for details.

-(4) wells were developed. Wells: SWMU114-MW0005S, SWMU114-MW0005I, SWMU114-MW0017S and SWMU114-MW0017I. See development logs and field notes for details.

-IDW was transffered. Drum 2206053 on pallett 205148 is ~80% full.

-Work operations were ended at ~1535 for a lightning standown.

6. Description of Work Completed

-Surface completions were installed at SLF.

-After drilling activities were completed at GSA, the rig broke down. Afer troubleshooting, it was determined the rig blew two fuel injecters.

-Due to No Dig status, surface completions were installed at Category A locations only.

-(5) Well pads (2x2) concrete, were installed. The following well pads were installed: SWMU114-MW0004I, SWMU114-MW0010S, SWMU114-MW0010I, SWMU114-MW0002S and SWMU114-MW0002I.

Scope: Groundwater sampling

Crew: J. Vojak, D. Lupis

Equipment: YSIs, Turbidity Meters, Water Level Meters, hand tools, work trucks

Weather: 74-94°F

1000 - Receive new YSI & peristaltic pump @ Merritt Island office.

1010 - Load vehicle

1020 - Travel to Cape field office.

1040 - Arrive to office / Load equipment

1100 - Calibrate YSI & Turbidity Meter. See cal logs for details.

1130 - Cal complete.

1145 - Travel to KSC/SLF

1205 - Check out radio / Discuss sampling locations w/ AFM.

1220 - JV makes to wells @ MW14 location

DL makes to wells @ MW01 location.

1235 - JV rigs up & samples wells @ MW18. See sampling logs for details.

1235 - DL rigs up & samples wells @ MW01. See sampling logs for details.

1400 - Phase II lightning standown. JV/DL rig down.

1405 - Collect S114-FB-20220817-01

1410 - Collect S114-EB-20220817-01

1435 - Crews arrive to Cape Field office / Unload equipment.

1450 - QC samples.

1510 - Depart base.

1530 - End of day

Scope: Groundwater Sampling

Crew: J. Vojak, D. Lupis

Equipment: YSIs, Turbidity Meters, Water Level Meters, hand tools, work trucks.

Weather: 72-91°F

0715 - Depart Merritt Island office.

0735 - Arrive to Cape field office

0745 - Calibrate YSIs & turbidity meters. See cal logs for details.

0825 - Cal complete.

0835 - Mobe to SLF AFM building

0855 - Check out airfield radio

0910 - JV rigs up & procede to sample wells @ MW15 location. See sampling log for details.

0915 - DL rigs up & procede to sample wells @ MW02 location. See sampling log for details.

1100 - JV rigs up & procede to sample wells @ MW12 location. See sampling logs for details

DL rigs up & procede to sample wells @ MW16 location. See sampling logs for details.

1250 - DL rigs up & procede to sample wells @ MW 3 location. See sampling log for details.

1300 - JV rigs up & procede to sample wells @ MW 13 location.

1420 - DL rigs up & procede to sample 5114-MW00041. See sampling log for details.

1500 - Phase II lightning shutdown.

1515 - JV returns airfield radio.

1510 - Collect 5114-FB-20220818-01 (DL)

1515 - Collect 5114-EB-20220818-01 (DL)

1530 - Mobe to Cape field office

1550 - Unload equipment & QC samples

5. Job Safety: (TGSM Topics, Report violations, instructions given, corrective action taken)

Biologicals, Pinch Points, COVID-19, Slips, Trips and Falls, Inclement Weather, Sun Exposure, Traffic, Struck by, Heat Stress, Team Work, PPE

6. Description of Work Completed

-Continue GW sampling at SWMU114. (14) wells were sampled. See field notes and sampling logs for details

-Final IDW: On pallett #221946 drum #226831 ~80% full and drum #227139 ~30% full

Scope: GW Sampling
Crew: J. Vojak, D. Lupis
Equipment: YSIs, Turbidity Meters, Water Level Meters, Hand Tools, Work Trucks
Weather: 74-93°F
0700 - Travel to KSC.
0730 - Arrive to CCF IDW yard. Transfer IDW
0755 - Calibrate YSI/Turbidity Meter. See cal log for details.
0815 - Calibration complete.
0820 - Travel to SWMU114
0833 - JV rig up & proceed to sample wells @ MW10 ~~MW0405~~ location. See sampling log for details.
0900 - DL rig up & proceed to sample wells @ MW05 location. See sampling log for details
1015 - JV rig up & proceed to sample wells @ MW09 location. See sampling log for details.
1045 - DL rig up & proceed to sample wells @ MW06 location. See sampling log for details.
1157 - JV rig up & proceed to sample wells @ MW11 location. See sampling log for details.
1205 - DL rig up & proceed to sample wells @ MW07 location.
1335 - JV & DL rig up & sample wells @ MW08 location. See sampling log for details.
1430 - JV mobe to CCF IDW yard, DL mobe to Cape field office.
1445 - Transfer IDW. Drum # 226831 on pallett # 221946 ≈ 80% Full. Drum # 227139 on pallett # 221946 ≈ 30% full.
1505 - JV mobe to Cape field office
1520 - Arrive to office

JV

NASA/KSC SWMU114 8/19/22

1525 - JV/DL QC samples & pack coolers.
1600 - Mobe to badging station to meet SGS courier
1615 - Relinquish samples to SGS courier
1630 - Stop for fuel.
1650 - Arrive to Merritt Island office.
1700 - End of day.
*1420 - Collect S114-FB-20220819-01 (JV)

SURVEYOR'S NOTES:

1. THE SPECIFIC PURPOSE OF THIS SURVEY IS TO DETERMINE THE HORIZONTAL AND VERTICAL POSITION OF GROUNDWATER MONITORING WELLS AND THE INSTALLATION LOCATION OF STAFF GAUGES.
2. THE COORDINATES DEPICTED HEREON ARE REFERENCED TO THE FLORIDA STATE PLANE COORDINATE SYSTEM, EAST ZONE, NORTH AMERICAN DATUM OF 1983 (NAD83), 1990 ADJUSTMENT AND ARE BASED ON UNITED STATES COAST AND GEODETIC SURVEY MONUMENT "WRIGHT", HAVING PUBLISHED COORDINATES OF NORTHING 1544816.33 FEET AND EASTING 768783.06 FEET.
3. THE ELEVATIONS DEPICTED HEREON ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88) AND ARE BASED ON UNITED STATES COAST AND GEODETIC SURVEY MONUMENT "WRIGHT", HAVING AN PUBLISHED ELEVATION OF 7.45 FEET.
4. THIS SURVEY WAS PREPARED FOR THE EXCLUSIVE USE OF THE CLIENT(S) SHOWN HEREON AND COPIES ARE VALID ONLY WHEN SIGNED, DATED AND EMBOSSED WITH THE SURVEYOR'S SEAL.

- 4.5 GROUND ELEVATION
- MONITORING WELL
- STAFF GAUGE

SURVEYOR'S NOTES:

1. THE SPECIFIC PURPOSE OF THIS SURVEY IS TO DETERMINE THE HORIZONTAL AND VERTICAL POSITION OF GROUNDWATER MONITORING WELLS AND THE INSTALLATION LOCATION OF STAFF GAUGES.
2. THE COORDINATES DEPICTED HEREON ARE REFERENCED TO THE FLORIDA STATE PLANE COORDINATE SYSTEM, EAST ZONE, NORTH AMERICAN DATUM OF 1983 (NAD83), 1990 ADJUSTMENT AND ARE BASED ON UNITED STATES COAST AND GEODETIC SURVEY MONUMENT "WRIGHT", HAVING PUBLISHED COORDINATES OF NORTHING 1544816.33 FEET AND EASTING 768783.06 FEET.
3. THE ELEVATIONS DEPICTED HEREON ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD 88) AND ARE BASED ON UNITED STATES COAST AND GEODETIC SURVEY MONUMENT "WRIGHT", HAVING AN PUBLISHED ELEVATION OF 7.45 FEET.
4. THIS SURVEY WAS PREPARED FOR THE EXCLUSIVE USE OF THE CLIENT(S) SHOWN HEREON AND COPIES ARE VALID ONLY WITH THE SIGNATURE AND ORIGINAL RAISED SEAL OF A FLORIDA LICENSED PROFESSIONAL SURVEYOR & MAPPER UNLESS ELECTRONICALLY SIGNED AND SEALED IN ACCORDANCE WITH FLORIDA STATUTES CHAPTER 472.025 AND THE STANDARDS OF PRACTICE FOR SURVEYS AS REFERENCED BY CHAPTER 5J-17, FLORIDA ADMINISTRATIVE CODES.

SURVEYOR'S CERTIFICATE
I HEREBY CERTIFY THAT THE SURVEY DEPICTED HEREON IS TRUE AND MEETS THE MINIMUM TECHNICAL STANDARDS SET FORTH BY THE FLORIDA BOARD OF PROFESSIONAL SURVEYORS & MAPPERS IN CHAPTER 5J-17.051, FLORIDA FLORIDA STATUTES.

Client: Hydrogeologic, Inc. **Job No:** FA90849

Site: NASA TQN 21- SLF PFAS Assessment **Report Date** 12/15/2021 1:24:12

On 11/16/2021, 6 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 0.6 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA90849 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP88674

Sample(s) FA90841-12MS, FA90841-12MSD were used as the QC samples indicated.

Sample(s) FA90849-1, FA90849-2 have surrogates outside control limits.

FA90849-1 for 13C2-PFDoDA: Outside control limits.

FA90849-1 for 13C7-PFUnDA: Outside control limits.

FA90849-1: Dilution required due to matrix interference (ID recovery standard failure).

FA90849-2 for 13C2-PFTeDA: Outside control limits.

FA90849-2: Dilution required due to matrix interference (ID recovery standard failure).

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

(a) Dilution required due to matrix interference (ID recovery standard failure).
(b) Result is from Run# 2
(c) Outside control limits.

U = Not detected LOD = Limit of Detection J = Indicates an estimated value
LOQ = Limit of Quantitation DL = Detection Limit B = Indicates analyte found in associated method blank
E = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

Date / Time Received: 11/16/2021 4:00:00 PM **Delivery Method:** COURIER **Airbill #'s:**

Therm ID: IR 1; **Therm CF:** 0.2; **# of Coolers:** 1

Cooler Temps (Raw Measured) °C: Cooler 1: (0.4);

Cooler Temps (Corrected) °C: Cooler 1: (0.6);

Cooler Information	Y	or	N
1. Custody Seals Present	☑		☐
2. Custody Seals Intact	☑		☐
3. Temp criteria achieved	☑		☐
4. Cooler temp verification	IR Gun		
5. Cooler media	Ice (Bag)		

Trip Blank Information	Y	or	N	N/A
1. Trip Blank present / cooler	☐		☐	☑
2. Trip Blank listed on COC	☐		☐	☑

	W	or	S	N/A
3. Type Of TB Received	☐		☐	☑

Sample Information	Y	or	N	N/A
1. Sample labels present on bottles	☑		☐	
2. Samples preserved properly	☑		☐	
3. Sufficient volume/containers recvd for analysis:	☑		☐	
4. Condition of sample	Intact			
5. Sample recvd within HT	☑		☐	
6. Dates/Times/IDs on COC match Sample Label	☑		☐	
7. VOCs have headspace	☐		☐	☑
8. Bottles received for unspecified tests	☐		☑	
9. Compositing instructions clear	☐		☐	☑
10. Voa Soil Kits/Jars received past 48hrs?	☐		☐	☑
11. % Solids Jar received?	☐		☐	☑
12. Residual Chlorine Present?	☐		☐	☑

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Hydrogeologic, Inc. **Job No:** FA90892

Site: NASA TQN 21- SLF PFAS Assessment **Report Date** 12/16/2021 5:32:23

On 11/18/2021, 17 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.8 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA90892 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP88672

Sample(s) FA90871-1MS, FA90871-1MSD were used as the QC samples indicated.

Sample(s) FA90892-11, FA90892-14, FA90892-16, FA90892-2, FA90892-4, FA90892-5 have surrogates outside control

FA90892-2 for 13C2-PFTeDA: Outside control limits.

FA90892-2: Dilution required due to matrix interference (ID recovery standard failure).

FA90892-4 for 13C2-PFTeDA: Outside control limits.

FA90892-4: Dilution required due to matrix interference (ID recovery standard failure).

FA90892-5 for 13C2-PFTeDA: Outside control limits.

FA90892-5: Dilution required due to matrix interference (ID recovery standard failure).

FA90892-11 for 13C2-PFTeDA: Outside control limits.

FA90892-11: Dilution required due to matrix interference (ID recovery standard failure).

FA90892-14 for 13C2-PFTeDA: Outside control limits.

FA90892-14: Dilution required due to matrix interference (ID recovery standard failure).

FA90892-16 for 13C2-PFTeDA: Outside control limits.

FA90892-16: Dilution required due to matrix interference (ID recovery standard failure).

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

(a) Dilution required due to matrix interference (ID recovery standard failure).
(b) Result is from Run# 2
(c) Outside control limits.

U = Not detected LOD = Limit of Detection J = Indicates an estimated value
LOQ = Limit of Quantitation DL = Detection Limit B = Indicates analyte found in associated method blank
E = Indicates value exceeds calibration range N = Indicates presumptive evidence of a compound

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Hydrogeologic, Inc. **Job No:** FA90938

Site: NASA TQN 21- SLF PFAS Assessment **Report Date** 12/17/2021 4:45:02

On 11/18/2021, 19 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA90938 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP88735

Sample(s) FA90938-1MS, FA90938-7DUP were used as the QC samples indicated.

Sample(s) FA90938-10, FA90938-11, FA90938-12, FA90938-13, FA90938-14, FA90938-15, FA90938-16, FA90938-17, FA90938-18, FA90938-3, FA90938-5, FA90938-7, FA90938-8, FA90938-9 have surrogates outside control limits.

FA90938-3 for 13C2-PFTeDA: Outside control limits.

FA90938-3 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-5 for 13C2-PFTeDA: Outside control limits.

FA90938-5 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-7 for 13C2-PFTeDA: Outside control limits due to matrix interference. Confirmed by batch QC.

FA90938-7 for 13C8-FOSA: Outside control limits.

FA90938-7 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-7 for PFOSA: Associated ID Standard outside control limits.

FA90938-8 for 13C2-PFTeDA: Outside control limits.

FA90938-8 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-9 for 13C2-PFTeDA: Outside control limits.

FA90938-9 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-10 for 13C2-PFTeDA: Outside control limits.

FA90938-10 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-11 for 13C2-PFTeDA: Outside control limits.

FA90938-11 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-12 for 13C2-PFTeDA: Outside control limits.

FA90938-12 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-13 for 13C2-PFTeDA: Outside control limits.

FA90938-13 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-14 for 13C2-PFTeDA: Outside control limits.

FA90938-14: Dilution required due to matrix interference (ID recovery standard failure).

FA90938-15 for 13C2-PFTeDA: Outside control limits.

FA90938-15: Dilution required due to matrix interference (ID recovery standard failure).

FA90938-16 for 13C2-PFTeDA: Outside control limits.

FA90938-16 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-17 for 13C2-PFTeDA: Outside control limits.

FA90938-17 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90938-18 for 13C2-PFTeDA: Outside control limits.

FA90938-18 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

Client: Hydrogeologic, Inc. **Job No:** FA90987

Site: NASA TQN 21- SLF PFAS Assessment **Report Date** 12/20/2021 8:50:50

On 11/19/2021, 10 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 2.8 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA90987 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP88791

Sample(s) FA91003-1MS, FA91003-4DUP were used as the QC samples indicated.

Matrix: AQ **Batch ID:** OP88792

Sample(s) FA91005-7MS, FA91005-7MSD were used as the QC samples indicated.

Sample(s) FA90987-8 have surrogates outside control limits.

FA90987-8: Dilution required due to matrix interference (ID recovery standard failure).

FA90987-8 for 13C2-PFTeDA: Outside control limits.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

On 11/19/2021, 14 Sample(s), 0 Trip Blank(s) were received at SGS North America Inc. at a maximum corrected temperature of 3.8 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. Job Number of FA90990 was Assigned to the project. Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP88775

Sample(s) FA91021-6MS, FA91021-6MSD were used as the QC samples indicated.

RPD(s) for MSD for Perfluorotridecanoic acid are outside control limits for sample OP88775-MSD. Probable cause is due to sample non-homogeneity.

Matrix: AQ **Batch ID:** OP88791

Sample(s) FA91003-1MS, FA91003-4DUP were used as the QC samples indicated.

Sample(s) FA90990-10, FA90990-11, FA90990-14, FA90990-8 have surrogates outside control limits.

FA90990-8 for 13C2-PFTeDA: Outside control limits.

FA90990-8 for 13C2-PFTeDA: Outside control limits.

FA90990-8 for 13C8-FOSA: Outside control limits.

FA90990-8 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90990-10 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits.

FA90990-10: Dilution due to sample clogging SPE cartridge, only partial volume was extracted.

FA90990-10: Dilution required due to matrix interference (ID recovery standard failure).

FA90990-11 for 13C2-PFTeDA: Outside control limits.

FA90990-14 for 13C2-8:2FTS: Outside control limits.

FA90990-14 for 13C2-PFDoDA: Outside control limits.

FA90990-14 for 13C7-PFUnDA: Outside control limits.

FA90990-14 for 8:2 Fluorotelomer sulfonate: Associated ID Standard outside control limits.

SGS North America Inc. certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc. is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Hydrogeologic, Inc. **Job No:** FA93380

Site: NASA TQN 21- SLF PFAS Assessment **Report Date:** 3/21/2022 4:44:57 PM

On 02/23/2022, 16 Sample(s), 0 Trip Blank(s) and 0 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 4.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FA93380 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP89961

Sample(s) FA93380-2MS, FA93380-3DUP, FA93380-2MS were used as the QC samples indicated.

RPD(s) for Duplicate for Perfluorodecanoic acid, Perfluorononanoic acid are outside control limits for sample OP89961-DUP. Probable cause is due to sample non-homogeneity.

Sample(s) FA93380-4, FA93380-9 have surrogates outside control limits.

FA93380-9: Dilution required due to matrix interference (ID recovery standard failure).

FA93380-4 for 13C4-PFBA: Outside control limits.

FA93380-4 for 13C5-PFPeA: Outside control limits.

FA93380-4 for 13C8-FOSA: Outside control limits.

FA93380-9 for 13C2-PFTeDA: Outside control limits.

Matrix: AQ **Batch ID:** OP89962

Sample(s) FA93380-13MS, FA93380-14DUP, FA93380-13MS were used as the QC samples indicated.

Matrix Spike Recovery(s) for Perfluorotridecanoic acid are outside control limits. Probable cause is due to matrix interference.

Sample(s) FA93380-13, FA93380-14, FA93380-15 have surrogates outside control limits.

FA93380-13 for 13C2-PFTeDA: Outside control limits.

FA93380-13 for 13C4-PFBA: Outside control limits.

FA93380-13 for Perfluorobutanoic acid: Associated ID Standard outside control limits, Confirmed by batch QC.

FA93380-13 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits, Confirmed by batch QC.

FA93380-14 for 13C2-PFTeDA: Outside control limits.

FA93380-14 for 13C4-PFBA: Outside control limits.

FA93380-14 for 13C8-FOSA: Outside control limits.

FA93380-14 for Perfluorobutanoic acid: Associated ID Standard outside control limits, Confirmed by batch QC.

FA93380-14 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits, Confirmed by batch QC.

FA93380-14 for PFOSA: Associated ID Standard outside control limits, Confirmed by batch QC.

FA93380-15: Confirmation run.

Matrix: AQ **Batch ID:** OP90272

Sample(s) FA93948-1DUP, FA93948-2MS were used as the QC samples indicated.

Sample(s) FA93380-15 have surrogates outside control limits.

FA93380-15 for Perfluorotetradecanoic acid: Associated ID Standard outside control limits. Confirmed by re-extraction and reanalysis.

FA93380-15 for 13C2-PFTeDA: Outside control limits.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

Site: NASA TQN 21- SLF PFAS Assessment **Report Date:** 3/16/2022 1:20:36 PM

On 02/25/2022, 3 Sample(s), 0 Trip Blank(s) and 1 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 4.6 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FA93472 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Semi-volatiles By Method EPA 537M QSM5.3 B-15

Matrix: AQ **Batch ID:** OP90042

Sample(s) FA93432-2MS, FA93432-2MSD were used as the QC samples indicated.

Sample(s) FA93472-1, FA93472-2 have surrogates outside control limits.

FA93472-1 for 13C3-PFBS: Outside control limits.

FA93472-1 for 13C4-PFBA: Outside control limits.

FA93472-1 for 13C5-PFPeA: Outside control limits.

FA93472-1: Dilution required due to matrix interference (ID recovery standard failure).

FA93472-2 for 13C4-PFBA: Outside control limits.

FA93472-2 for 13C8-FOSA: Outside control limits.

FA93472-2 for PFOSA: Associated ID Standard outside control limits, Confirmed by re-analysis.

FA93472-2: Dilution required due to matrix interference (ID recovery standard failure).

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.

SAMPLE DELIVERY GROUP CASE NARRATIVE

Client: Hydrogeologic, Inc. **Job No:** FA95502

Site: SWMU 114 Fire Station 2; KSC, FL **Report Date:** 6/1/2022 4:04:31 PM

On 05/06/2022, 7 Sample(s), 0 Trip Blank(s) and 1 Field Blank(s) were received at SGS North America Inc - Orlando. at a maximum corrected temperature of 4.2 C. Samples were intact and chemically preserved, unless noted below. A SGS North America Inc. - Orlando Job Number of FA95502 was assigned to the project.

Laboratory sample ID, client sample ID and dates of sample collection are detailed in the report's Results Summary Section. Specified quality control criteria were achieved for this job except as noted below. For more information, please refer to the analytical results and QC summary pages.

MS Semi-volatiles By Method EPA 537M BY ID

Matrix: AQ **Batch ID:** OP91243

Sample(s) FA95500-2MS, FA95500-5DUP were used as the QC samples indicated.

Matrix: LEACHATE **Batch ID:** OP91274

Sample(s) FA95502-1MS, FA95502-2DUP were used as the QC samples indicated.

RPD(s) for Duplicate for Perfluorobutanesulfonic acid, Perfluoroheptanoic acid, Perfluorooctanoic acid are outside control limits for sample OP91274-DUP. Probable cause is due to sample non-homogeneity.

Sample(s) FA95502-1, FA95502-2, FA95502-3 have surrogates outside control limits.

FA95502-1 for 13C2-PFTeDA: Outside control limits.

FA95502-2 for 13C2-PFTeDA: Outside control limits.

FA95502-2: Dilution required due to matrix interference (ID recovery standard failure).

FA95502-3 for 13C2-PFTeDA: Outside control limits.

FA95502-3: Dilution required due to matrix interference (ID recovery standard failure).

General Chemistry By Method SM19 2540G

Matrix: SO **Batch ID:** GN91307

Sample(s) FA95489-4DUP were used as the QC samples for Solids, Percent.

SGS North America Inc. - Orlando certifies that data reported for samples received, listed on the associated custody chain or analytical task order, were produced to specifications meeting the Quality System precision, accuracy and completeness objectives except as noted. Estimated non-standard method measurement uncertainty data is available on request, based on quality control bias and implicit for standard methods. Acceptable uncertainty requires tested parameter quality control data to meet method criteria. SGS North America Inc.- Orlando is not responsible for data quality assumptions if partial reports are used and recommends that this report be used in its entirety.
